Motor Mount - Swivel Clamp (32mm)

ROB-12180

images are CC BY-NC-SA 3.0

Description: This motor mount connects to other Actobotics products with a swivel mount, allowing you to easily attach your motor to gears or pulleys. A set screw on the swivel mount (sold separately below) allows you to position the motor accurately and lock in its position. You can even rotate the motor inside the mount by loosening the set screw. All these adjustments make for a very versatile mount. This mount works with motors with a 32mm body diameter.

Actobotics is a robotics building system based around extruded aluminum channels, gears, precision shafts, and ball bearings. Thanks to the two standardized hole patterns, nearly all Actobotics components can be intuitively connected together. The wide range of components makes building complex electromechanical prototypes or finished projects a reality.
