

DPXA - Single Shell DPX

DPXA connectors are one-piece shell miniature rack/panel connectors. The construction offers high strength and maximum utilization of insert area for contact arrangements accommodating up to 106 contacts. Shells are keystone-shaped for polarization. Operating temperature for the DPXA is -54.2°C to +125°C (-67°F to +257°F).

DPXA-34

DPXB-33

DPXB - Polarized ARINC Shell

DPXB connectors are DPXA connectors with an ARINC B shell. Additional polarization is provided by three hexagonal polarizing posts.

DPX2 - Two Gang DPX Series

DPX2 connectors are the original two-gang versions of the DPX, and are made of the same materials and accommodate the same contact arrangements. Keystone shaped shells accommodate two DPX inserts with up to 212 contacts. The DPX2 has three polarizing posts with 99 polarizing positions.

DPX2-34B

DPX2-33B

DPX2 - A - ARINC A Shell

DPX2-A connectors are DPX2 connectors with an ARINC A shell. This shell type has the receptacle flange placed .344 (8.74) from the front of the engaging portion of the shell, and short aluminum alloy polarizing posts permit polarization before contacts engage.

DPX2-B - ARINC B Shell

DPX2-B connectors supersede the DPX2-A and have an ARINC B Shell. This Shell type has the

receptacle flange placed .060 (1.52) from the front of the engaging portion of the shell, and polarizing posts permit polarization before the shells engage.

DPX3 - Three Gang DPX Series

DPX3 connectors are three-gang versions of the DPX, made of the same materials, and accommodate the same contact arrangements. The three-gang version can therefore accommodate up to a total of 318 in the keystone shaped shells, with three polarizing posts that are capable of providing up to 99 polarizing positions.

DPX3-34

DPX4-33

DPX4 - Four Gang DPX Series

DPX4 connectors are four gang versions of the DPX, made of the same materials, and can accommodate four separate arrangements that can total up to 424 contacts. The DPX4 has three polarizing posts with 99 polarizing positions.

DPX*MA - LITTLE CAESAR® Contact Assembly

DPX*MA connectors are DPX connectors with the LITTLE CAESAR contact assembly for rear insertion, release, and extraction of crimp type contacts. Insertion requires no tool; extraction requires an expendable plastic tool. A hard dielectric, closed-entry socket insert has lead-in chamfers for positive mating of contacts. Contacts are crimpable with the M22501 tool.

DPX*ME - Environmental with LITTLE CAESAR® Contact Assembly

DPX*ME connectors are DPXMA connectors with environmental interfacial and grommet seals, and olive drab shell finish.

**Crimp rear release coaxial contacts.
†A106 arrangements have the POS-ALINE connector design. See below.
NOTE: Engaging force of each layout arrangement shall not exceed 45 lbs. maximum.

Positive Contact Alignment Design

For high density A106 contact arrangement

In the POS-ALIGN connector construction the entire pin contact is recessed in an individual cavity in the plug insulator while the sturdy socket members are exposed and extend from the connector receptacle face. There is a lead-in chamfer that guides the socket contact into the pin cavity assuring proper contact alignment during mating and protecting the pin contact from damage and wear.

Contact and Termination Tooling Data - Commercial

Crimp Contacts

The crimp contacts are shipped with the connector, not installed. Additional contacts may be ordered using the part numbers listed below. All tools must

be purchased separately. The insertion/extraction tools listed are plastic type. Consult factory for more durable metal tools.

	Socket	031-1151-000	031-1151-000						

* Requires air line pressure of 80 to 100 psi.

These DPXME contacts are being superseded in favor of military DPXNE/NA contacts, this applies to all existing DPXME connector assemblies, except for size 20 contacts.

Description of Modification Codes for Special Connector Insert Assemblies

Class	Series	DPX Insert Type	Class	Series	DPX Insert Type	Class	Series	DPX Insert Type
None	DPXA DPXB	Two (2) pieces, solder pot.	D*	-	(MA) LITTLE CAESAR assembly, crimp pot, (Cat. A)	DPX2CA-/	-	A side: (MAS) LITTLE CAESAR assembly, solder pot (32W2S)
MA	DPXAMA DPXBMA	LITTLE CAESAR rear release contact retention assembly, crimp pot.	E*	-	Metal plates.	DPX2AC- (Reverse CA)	-	B side; Standard 2 Piece, solder pot (57S). Ex: DPX2CA-32W2S57S-33-0001
MAS	-	LITTLE CAESAR assembly, solder pot,	F*	-	Rear release, crimp (MB type only).	DPX2AF	-	A side: Standard solder pot. B side: Rear release crimp with separator. Ex: DPX2AF-13S26S-33B-0001
MB	-	LITTLE CAESAR rear release contact retention assembly, crimp pot, with separator.	DPX2-	-	Standard 2 pieces, solder pot, both sides, Ex: DPX2-57S57S-33-0001	DPX2BA	-	A side: Ring-Loc solder pot (40W1S). B Side: 2 Piece, Solder Pot (57S). Ex: DPX2BA-40W1S57S-33-0001
MS	-	Ring-Loc, solder pot,	DPX2MA	-	Standard LITTLE CAESAR assembly, crimp pot both sides Ring-loc coax. EX:DPX2MA-57S57S-33-0001	DPX2DA	-	A side: (MA) LITTLE CAESAR assembly, Crimp (67S). B Side: 2 Piece, solder pot (57S). Ex: DPX3DA-67S57S-33-0001
ME	-	Environmental, connector.	DPX2MAS	-	LITTLE CAESAR assembly, solder po, both sides Ring-Loc coax. EX: DPX2MAS-57S57S-33-001	DPX2EB	-	A side: Metal plates for grounding (Coaxes). B side: Ring-Loc, solder pot. Ex: DPX2EB-C1P40W1P-34B-0001
A*	-	Two (2) pieces, solder pot (Standard 2 pieces insert).	DPX2MS-	-	Ring-Loc, solder pot. Layout 25C3 pin only and 40C1 Pin and socket. EX: DPX2MS-40W1S40W1S-33-0001			
B*	-	Ring-Loc, solder pot. (See MS)						
C*	-	(MAS) LITTLE CAESAR assembly, Solder pot.						

*NOTE: When any two of these letters are used in combination, the inserts ("A" and "B") side have the style contacts indicated (see table opposite for examples).

Coaxial Cable Assembly

ITT Cannon recommends resistance soldering for all solder contacts, particularly for RF cable where excessive heat will damage the dielectric. Wires

should be pre-tinned. Bushing, endbells, and junction shells (where applicable) must be slipped over wire bundles before soldering is started. Consult

factory for types not shown. The mechanical steps in wiring coaxials described below.

For Codes A, B, C, D, and E

1. Cut cable evenly. Trim to dimensions as shown on page 60. Care should be taken not to injure the conductor or dielectric.
2. Remove inner contact from coaxial assembly and solder it to inner conductor of cable.
3. Push inner contact back into coaxial assembly.
4. Pull outer conductor over coaxial shell, and solder.
5. Apply shrink sleeving after assembly.

**For Codes I and J**

1. Cut cable evenly. Trim to dimensions as shown on page 60. Care should be taken not to injure the conductor or dielectric.
2. Comb braid, tin conductor and remove flux.
3. Remove solder pot cover. Insert cable and solder conductor to contact. The dielectric should butt against contact solder pot.
4. Replace solder pot cover and solder braid to ferrule.
5. Apply shrink sleeving after assembly.

**For Codes K**

1. Cut cable evenly. Trim to dimensions as shown on page 60. Care should be taken not to injure the conductor or dielectric.
2. Unscrew cap and remove spacer and inner contact from coaxial assembly.
3. Push cable through center of cap and spacer.
4. Solder inner contact to inner conductor of cable.
5. Push inner contact back into coaxial shell assembly and attach cap.
6. Separate outer conductor of cables into two pigtails 180° apart.
7. Attach on pigtail to each end of cap strip and solder.
8. Apply shrink sleeving after assembly.

**For Codes Z and AA**

1. Cut cable evenly. Trim to dimensions as shown on page 60. Care should be taken not to injure the conductor or dielectric.
2. Solder inner conductor to coaxial contact through side slot in coaxial with outer sleeve pushed back on cable.
3. Pull sleeve forward over braid and solder through holes in sleeve.
4. Solder sleeve to coaxial body.

Coaxial Contacts

NOTES: 1. The "X" dimension is take from the rear of the shell.

2. Codes G and S are inactive for new design. Use codes AD and AE.

3. Code AA is designed for installations that have limited space in the terminal area. Use code AG for standard installations.

*P for pin; S for socket.

DPX*MA/ME Coaxial Contact Data (for environmental requirements)

Components/Accessories

NOTE: The A32W2 & A40W1 (Ring Type Retention); AW8 & A32W4 (LITTLE CAESAR Renention) Coaxial Contact arrangements have been redesigned to provide ease of insertion/removal of the coaxial contacts. Sealing is accomplished with the addition of sealing sleeves provided with the coaxial contact assembly.

RING TYPE RETENTION (A32W2 & A40W1 CONTACT ARRANGEMENTS)

40W1 (MA Version)
A40W1 (ME Version)

Cable Trim
Dimensions

Coaxial Contact Assembly Recommendations

(For Codes A, B, C, D, E, J, K, L and P)

- Center contact, rear insulator, crimp ring, support bushing and seal sleeve are packaged separately and shipped with the coaxial assembly.
- Use impact extraction tool no. CET-C4 (038869-0004). An insertion tool is not required. (See Item 4).
- Cable Assembly Instructions
 - If applicable, determine which portion of seal sleeve should be used. If seal 2 is used, cut off seal 1 portion
 - In sequence, place seal sleeve, support bushing and crimp ring over cable jacket.
 - Trim cable per illustration.
 - Place rear insulator over dielectric.
 - Solder innerconductor to center contact.
 - Insert soldered cable firmly into coaxial with shielding over coaxial shell.
 - Pull crimp ring forward until stopped and crimped.
 - Insert coaxial assembly into connector until engaged. Push support bushing into grommet until shoulder rest on tubular extension. Then pull seal sleeve forward until it is snug against grommet.
- To extract coaxial, push back seal sleeve and support bushing. Then push out coaxial from engaging end with CET-C4 (038869-0004) impact tool.
- When crimping with CA58073 crimp tool, care should be taken to avoid flaring the front end of the crimp ring. Place Crimp jaw so that the second tooth of the indentors is over the end of the crimp ring.
- To facilitate extraction of contacts and avoid splaying the length of free cable adjacent to the rear surface of the connector should not be less than 2.000 (50.80).

WITHOUT SEAL

*P for Pin, S for Socket

Unsealed accommodates both Seal 1 & Seal 2 cables.

For use with connector supplied less grommet (Code-29**, etc.).

Coaxial Contact Assembly and Extraction Recommendations

1. Use Crimp Tool No. DIE Y211 (995-0002-249), Tool M22520 / 5-01 (995-0001-761).
2. Use extraction tool No. CET-C8. An insertion tool is not required. (See Note 5).
3. Center contact, rear insulator, crimp ring, support bushing (not applicable to RG58/RG142 coaxials), seal sleeve, front insulator, shell and ferrule are shipped unassembled in a common container.
4. Cable Assembly Instructions:
 - Step 1 - If applicable, determine which portion of seal sleeve should be used. If seal 2 is used, cut off seal 1 portion.
 - Step 2 - In sequence, place seal sleeve, support bushing and crimp ring over cable jacket.
 - Step 3 - Trim cable per illustration.
 - Step 4 - Comb out braid and flare out ends to permit entry of ferrule.
 - Step 5 - Complete termination per illustration. (See below)
5. To extract: coaxial, push back seal sleeve and support bushing. Slip cable into extraction tool. Push tool into insert until it contacts coaxial retaining shoulder. Grip both cable and tool with one hand and pull coaxial rearward out of insert cavity.

WITHOUT SEAL

SEALED

6. To facilitate extraction of contacts and avoid splaying, the length of free cable adjacent to the rear surface of the connector should not be less than 2.000 (50.80).

- A. Carefully push inner conductor through rear insulator.
- B. While holding rear insulator firmly against ferrule, trim conductor to .156 (3.96)/.146 (3.71) dimension.
- C. Place contact over conductor and solder.

- A. Push ferrule under braid as far as it will go. Trim off braid extending beyond shoulder of ferrule, if necessary.
- B. While holding ferrule in place pull crimp sleeve forward over braid until it is tight against shoulder of ferrule. Pull firmly against face of ferrule to make sure it is up tight.
- C. Trim dielectric to the .035 (0.89)/.030 (0.76) dimension.

- A. Place front insulator over contact and then push assembly into coaxial shell.
- B. Place parts in jaw of crimp tool. Locate jaws at start of chamfer on crimp sleeve. Press sleeve firmly into coaxial shell and crimp.
- C. After assembled coaxial is inserted into connector, push support bushing into grommet until shoulder rests on tubular extension. Then pull sealing sleeve forward until it is snug on grommet.

Coaxial Cable Assembly Recommendations

LITTLE CAESAR Contact Assembly Data

For Codes F, S and T

1. Strip and trim cable as shown on page 60.
2. Solder inner conductor to coaxial contact with crimp ring over braid and rear insulator over inner conductor.
3. Insert cable into coaxial with shell under braid. Crimp ring with Cannon crimp tool CA58073.

For Codes G, H and R

1. Strip and trim cable as shown on page 60.
2. Solder inner connector to coaxial contact with crimp ring pushed back on cable.
3. Insert cable into coaxial and pull ring forward over braid. Crimp ring with Cannon crimp tool CA58073-0001 or CCT-408M. After crimping, crimp ring must not exceed .252 (6.40) diameter.

For Codes U

1. Strip and trim cable as shown on page 60.
2. Slide crimp ring over braid and jacket of cable.
3. Unbraid exposed portion of braid and fold braid wires backward over outside of crimp ring.
4. Insert prepared wire into right angle fitting of shell assembly. Conductor should be aligned in slot of the center contact. Crimp with Cannon tool CCT/C10.
5. Solder center conductor of cable to contact. Insert cap and solder in place.

For Codes AA

1. Slip ferrule over cable jacket. Trim outer jacket. Comb out braid as shown. Retrim braid.
2. Bend up combed out braid at right angles to cable. Slide ferrule up to bend and fold braid back against ferrule.
3. Slide rear insulator over dielectric as shown. Press insulator firmly against folded back braid and trim dielectric flush with insulator. Then cut inner conductor to length shown.
4. Place contact over conductor. Press contact and insulator firmly against braid and solder contact to conductor.
5. Push cable assembly into shell, pressing against rear of ferrule and crimp area shown with T. & B. #WT-400 Crimp Tool while making sure parts do not move out of place.

For Codes AC

1. Trim jacket to .680 (17.27)/.660 (16.76) dimension. Then slide ferrule over braid until it stops against jacket, and comb out exposed portion of braid.
2. Fold combed braid over ferrule as shown. Then trim dielectric to .070 (1.78)/.060 (1.52) dimension and slide rear insulator over dielectric until it presses against braid.
3. Press insulator against braid and trim inner conductor to .247 (6.27)/.237 (6.02) dimension. Then place contact over conductor and crimp with MS3191-3 (do not use MS3191-1). Press parts firmly against locator during crimping operation.
4. Place front insulator over contact. Push parts into coaxial shell. While holding parts firmly against stop shoulder in coaxial shell, place jaw of crimp tool at back end of shell and crimp. Use Buchanan crimp tool #612991 (.343 [8.71] across hex).

Coaxial Cable Assembly Recommendations (Continued)

For Code V

1. Trim cable to dimensions shown below.
 - A. Push ferrule under braid as far as it will go and press braid down tightly around ferrule.
 - B. Solder ends of braid to ferrule by applying a small amount of solder. Avoid excess solder as it would cause braid to swell up.
 - C. Remove any solder exceeding the .349 (8.86) max. diameter.
 - D. Check the .075 (1.90) max. dielectric extension, retrim if necessary.
3. A. Place rear insulator over dielectric and conductor into contact.
 - B. Solder contact to conductor through access hole.
 - C. Remove excess solder from outside of contact.
4. A. Place front insulator over contact.
 - B. Push parts into coaxial shell.
 - C. While holding parts firmly against stop shoulder in coaxial shell, place jaw of crimp tool at back end of shell and crimp, use Buchanan crimp tool #612991 [.343 (8.71) across hex].

**For Codes AB, AD, AE, AF and AG**

Setp 1 - Trim cable as shown.

Step 2 - Flare out ends of braid to permit entry of ferrule.

Step 3 - Complete termination per instructions as shown below.

- a. Push ferrule under braid as far as it will go. Trim off braid extending beyond shoulder of ferrul, if necessary.
- b. While holding ferrule in place pull crimp sleeve forward over braid until it is tight against shoulder on ferrule. Push firmly against face of ferrule to make sure it is up tight.
- c. Trim dielectric to the .035 (0.89)/.030 (0.76) dimension.
- d. Carefully push inner conductor through rear insulator.
- e. While holding rear insulator firmly against ferrule, trim conductor to .156 (3.96)/.146 (3.71) dimension.
- f. Place contact over conductor and solder.
- g. Place front insulator over contact and then push assembly into coaxial shell.
- h. Place parts in jaw of crimp tool. Locate jaws at start of chamfer on crimp sleeve. Press Sleeve firmly into coaxial shell and crimp. Use Daniels crimp tool HX4-210.

The last two digits in the DPX nomenclature (ex: DPXB-8-33B-0014) refer to the polarizing post position. When the last two digits are omitted it means the polarizing posts will not be assembled and position number is not stamped on the connector. This allows the customer to position the posts themselves and then stamp the appropriate number on the shell. If the last two digits are made 00 it means the polarizing posts are deleted.
