D1 tapes

The DYMO single cassette tape system has been upgraded and repackaged. Now called DYMO D1 tape, it should be much easier to select which tape you need, you just need to know the width and colour you require. To make it easier to use, we have introduced a split backing on all widths except 6mm, just peel and stick.

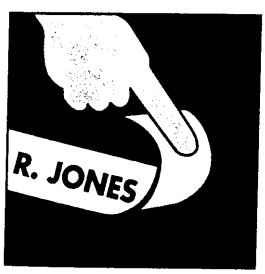

See pages 68/69 for compatibility.

DYMO D1 tapes are for the Pocket, 1000, 1000 Plus, 2000, 3500, 4500, 5000, 5500, LM100, LM200, LM300, LP200, LP300.

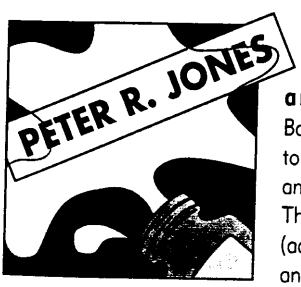

Heat resistance

Both legibility (text, colours) and adhesion are assured between - 30°C and +150°C. Decomposition of the label may start at 250°C.

Removal

The tape has been developed as a semi-permanent labelling system. This means that the tape will stick to surfaces but can be removed leaving, depending on the kind of surface, a minimum of adhesive traces. Remove any traces with an appropriate solvent e.g. ethyl acetate (stainless steel) or alcohol (other). Adhesion may become stronger with ageing.

Resistance to water and chemicals

Both the print and the label are resistant to water, oils and greases, as well as to anorganic compounds (weak solvents). The effect of using strong solvent (aceton, ether ...) may be fading print and de-lamination of the tape.

Surface

Test results show that DYMO labels adhere particularly well to ABS, polycarbonate, PVC, PE, acrylic, glass, wood, paper and stainless steel. Adhesion to other surfaces is possible, but results may not be as long lasting. Always apply to clean, dry and flat surfaces to ensure full adhesion.
