DUAL-CHANNEL
HCPL-2730
HCPL-2731

DESCRIPTION

The 6N138/9 and HCPL-2730/HCPL-2731 optocouplers consist of an AlGaAs LED optically coupled to a high gain split darlington photodetector.

The split darlington configuration separating the input photodiode and the first stage gain from the output transistor permits lower output saturation voltage and higher speed operation than possible with conventional darlington phototransistor optocoupler. In the dual channel devices, HCPL-2730/HCPL2731, an integrated emitter - base resistor provides superior stability over temperature.

The combination of a very low input current of 0.5 mA and a high current transfer ratio of 2000% makes this family particularly useful for input interface to MOS, CMOS, LSTTL and EIA RS232C, while output compatibility is ensured to CMOS as well as high fan-out TTL requirements.

An internal noise shield provides exceptional common mode rejection of 10 kV/ μ s. An improved package allows superior insulation permitting a 480 V working voltage compared to industry standard 220 V.

FEATURES

- Low current - 0.5 mA
- Superior CTR-2000%
- Superior CMR-10 kV/ μ s
- Double working voltage-480V RMS
- CTR guaranteed 0-70°C
- U.L. recognized (File # E90700)
- Dual Channel - HCPL-2730
HCPL-2731

APPLICATIONS

- Digital logic ground isolation
- Telephone ring detector
- EIA-RS-232C line receiver
- High common mode noise line receiver
- μ P bus isolation
- Current loop receiver

ABSOLUTE MAXIMUM RATINGS (No derating required up to 85°C)

Parameter	Symbol	Value	Units
Storage Temperature	T_{STG}	-55 to +125	°C
Operating Temperature	T_{OPR}	-40 to +85	°C
Lead Solder Temperature	T_{SOL}	260 for 10 sec	°C
EMITTER			
DC/Average Forward Input Current	Each Channel	I_F (avg)	20 mA
Peak Forward Input Current (50% duty cycle, 1 ms P.W.)	Each Channel	I_F (pk)	40 mA
Peak Transient Input Current - ($\leq 1 \mu$ s P.W., 300 pps)		I_F (trans)	1.0 A
Reverse Input Voltage	Each Channel	V_R	5 V
Input Power Dissipation	Each Channel	P_D	35 mW
DETECTOR			
Average Output Current	Each Channel	I_O (avg)	60 mA
Emitter-Base Reverse Voltage	(6N138 and 6N139)	V_{EB}	0.5 V
Supply Voltage, Output Voltage	(6N138, HCPL-2730)	V_{CC}, V_O	-0.5 to 7 V
	(6N139, HCPL-2731)	V_{CC}, V_O	-0.5 to 18 V
Output power dissipation	Each Channel	P_D	100 mW

NOTES

- Current Transfer Ratio is defined as a ratio of output collector current, I_O, to the forward LED input current, I_F, times 100%.
- Pin 7 open. (6N138 and 6N139 only)
- Common mode transient immunity in logic high level is the maximum tolerable (positive) dV_{CM}/dt on the leading edge of the common mode pulse signal, V_{CM}, to assure that the output will remain in a logic high state (i.e., V_O > 2.0 V). Common mode transient immunity in logic low level is the maximum tolerable (negative) dV_{CM}/dt on the trailing edge of the common mode pulse signal, V_{CM}, to assure that the output will remain in a logic low state (i.e., V_O < 0.8 V).
- Device is considered a two terminal device: Pins 1, 2, 3 and 4 are shorted together and Pins 5, 6, 7 and 8 are shorted together.
- For dual channel devices, C_{I-O} is measured by shorting pins 1 and 2 or pins 3 and 4 together and pins 5 through 8 shorted together.
- Measured between pins 1 and 2 shorted together, and pins 3 and 4 shorted together.
