Max. DC load breaking capacity

Load limit curve 1: arc extinguishes during transit time (changeover contact).

Load limit curve 2: safe shutdown, no stationary arc (make contact).

Load limit curves measured with low inductive resistors verified for 1000 switching events.

Contact Data (continued)

Mechanical endurance	>1x10 ⁶ ops.
- The values apply to a resistive or inductive load with suitable spark suppression and at maximum 14VDC for 12VDC or 28VDC for 24VDC load voltages. For a load current duration of maximum 3s for a make/break ratio of 1:10. - Current and time are compatible with circuit protection by a typical automotive fuse. Relay will make, carry and break the specified current. - See chapter Diagnostics of Relays in our Application Notes or consult the internet at http://relays.te.com/appnotes/ - For unsuppressed relay coil. A low resistive suppression device in parallel to the relay coil increases the release time and reduces the lifetime caused by increased erosion and/or higher risk of contact tack welding.
