Note1. Definition of response time

The response time is defined as the LCD optical switching time interval between “White” state and “Black” state. Rise time (T_{ON}) is the time between photo detector output intensity changed from 90% to 10%. And fall time (T_{OFF}) is the time between photo detector output intensity changed from 10% to 90%. For additional information see FIG1.

Note2. Definition of contrast ratio

Contrast ratio(Cr) is defined mathematically by the following formula.
For more information see FIG.2.

Contrast ratio= $\frac{\text{Luminance measured when LCD on the "White" state}}{\text{Luminance measured when LCD on the "Black" state}}$

Measured at the center area of the LCD

Note3. Definition of surface luminance

Surface luminance is the luminance with all pixels displaying white.
For more information see FIG.2.

L_v = Average Surface Luminance with all white pixels($P_1, P_2, P_3, \dots, P_n$)

Note4. Definition of luminance uniformity

The luminance uniformity in surface luminance is determined by measuring luminance at each test position 1 through n, and then dividing the maximum luminance of n points luminance by minimum luminance of n points luminance. For more information see FIG.2.

$Y_u = \frac{\text{Minimum surface luminance with all white pixels } (P_1, P_2, P_3, \dots, P_n)}{\text{Maximum surface luminance with all white pixels } (P_1, P_2, P_3, \dots, P_n)}$

Note5. Definition of color chromaticity (CIE1931)

CIE (x,y) chromaticity, The x,y value is determined by screen active area center position P5. For more information see FIG.2.

Note6. Definition of viewing angle

Viewing angle is the angle at which the contrast ratio is greater than 10. angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface.
For more information see FIG.3.

For viewing angle and response time testing, the testing data is base on Autronic-Melchers's ConoScope or DMS series Instruments or compatible. For contrast ratio, Surface Luminance, Luminance uniformity and CIE, the testing data is base on TOPCON's BM-5or BM-7 photo detector or compatible.

T8	0	5	10	ms
T9	0	1	10	ms
T10	0	2	100	ms

CTP POWER SEQUENCE Power On

1. T1: the time difference between $0.9 \cdot V_{DD}$ and $0.9 \cdot V_{DDIO}$. T1 must be ≥ 0 sec.
2. T2: the time difference between $0.9 \cdot V_{DDIO}$ and RSTN. T2 must be ≥ 200 us.
3. T3: the time difference between RSTN and Commands. T3 must be ≥ 150 ms.
4. T4: IC start to report point location to host. T4 must be ≥ 300 ms.

Power Off

Tg1: the time difference between power-off and power-on. Tg1 must be $> 10\mu s$.

Tg2: the time difference between power-off and power-on. Tg2 must be $> 10\mu s$.

Note. During the power off time, the VDD must be lower than 0.5V that make sure the touch controller have been correctly reset.

11. RELIABILITY TEST CONDITIONS

No.	Test item	Test condition		Inspection after test
11.1	High temperature storage test	+60°C/240 hours		Inspection after 2~4hours storage at room temperature, the sample shall be free from defects : 1.Current changing value before test and after test is 50% larger; 2. Function defect : Non-display,abnormal-d isplay,missing lines, Short lines,ITO corrosion; 3.Visual defect : Air bubble in the LCD,Seal leak,Glass crack.
11.2	Low temperature storage test	-20°C/240 hours		
11.3	High temperature operating test	+50°C/120 hours		
11.4	Low temperature operating test	0°C/120 hours		
11.5	Temperature cycle storage test	-20°C ~ 25°C ~ +60°C/10cycles (30min.) (10min.) (30min.)		
11.6	High temperature high humidity test	+50°C*90% RH/120 hours		
11.7	Vibration test	Frequency : 250 r/min Amplitude : 1 inch Time: 45min		
11.8	Drop test	Drop direction: 1 corner/3 edges/6 sides 10 time		
		Packing weight(kg)	Drop height(cm)	
		<11	80±1.6	
		11≤G<21	60±1.2	
		21≤G<31	50±1.0	
		31≤G<40	40±0.8	
11.9	ESD test	Air discharge: ±8KV, 10time Contact discharge: ±4KV, 10time		
Remark : 1.The test samples should be applied to only one test item. 2.Sample size for each test item is 3~5pcs. 3.For High temperature high humidity test, Pure water(Resistance>10MΩ) should be used. 4.In case of malfunction defect caused by ESD damage, if it would be recovered to normal state after resetting, it would be judged as a good part. 5.B/L evaluation should be excepted from reliability test with humidity and temperature: Some defects such as black spot/blemish can happen by natural chemical reaction with humidity and Fluorescence B/L has. 6.Failure judgment criterion: Basic specification, Electrical characteristic, Mechanical characteristic, Optical characteristic.				

12. INSPECTION CRITERION

12.1. Objective

The CTP test criterion are set to formalize CTP quality standards for ODNA with reference to those of the customer for inspection, release and acceptance of finished CTP products in order to guarantee the quality of CTP products required by the customer.

12.2. Scope

This specification is applicable to capacitive touch panel manufactured by ODNA.

12.3. Equipment for Inspection

lamp-box、ionizing fan 、10X microscopes 、film card、alcohol/oil ether/acetone、finger cots、 vernier caliper、anti-static wrist straps, microcalliper、feeler、pencil hardness tester、spectrophotometer 、drop ball test,etc.

12.4. Sampling Plan and Reference Standards

Sampling plan:Refer to National Standard GB/T 2828.1---2012/ISO2859-1:1999, level II of normal levels:

Product Category	Consumer	Non-consumer	Industrial	Automobile
AQL	MA=0.4 MI=1.5	MA=0.4 MI=1.0	MA=0.25 MI=0.65	MA=0.15 MI=0.40

12.5. Inspection 5.Conditions and Inspection Reference

12.5.1. Inspection environment: temperature: 23±3°C; humidity: 40~70%RH; cleanness: 10000 grade;

12.5.2 .Inspection distance: 30cm±5cm;

12.5.3. Inspection angle: vertical rotate angle: ±45°, up->down;horizontal rotate angle:±45°,left->right

12.5.4 .Inspection luminance :

(1) appearance inspection: Inspection luminance is 800~1200Lux

12.5.5 background: white/black

12.5.6. Inspection time : 10~15s/ pcs;

Black Booth or Black Background

12.5.7.2 VA area: Visual Windows area (refer to below sketch Red blank);

12.5.7.3 Area A: visual area from front side view((refer to below sketch Blue blank))

12.5.7.4 Area B: four sides and FPC area((refer to below sketch Green blank))

12.5.7.5 Undefined items or other special items, refer to mutual agreement and limited sample. If criterion does not match product specifications/ technical requirement, both should be subject to special inspection criterion agreed by customer.

12.5.8 Defect define:

12.5.8.1 Defect in AA area: pixel defect, function defect (no display, miss line, dark line, wrong polarizer angle, image retention, flicker, abnormal display, dim/bright display, Contrast ratio, dot defect (white dot, black dot, dark dot, Convex-concave point, bubble, foreign material), visual line defect (fiber, scratch, foreign material), stain and so on

12.5.8.2 Defect in VA area: dot defect (white dot, black dot, dark dot, Convex-concave point, bubble, foreign material), visual line defect (fiber, scratch, foreign material), stain and so on

12.5.8.3 Defect in A area: Line defect (scratch, soft flocks, fibre), dot defect (white dot, black dot, same color dot, different color dot, dust, bubble), surface stain, pin-hole, light leak, scratch.

12.5.8.4 Defect in B area: Broken, crack/chipping, FPC defect

12.5.9 Undefined items or other special items, refer to mutual agreement and limited sample. If criterion does not match product specifications/ technical requirement, both should be subject to special inspection criterion agreed by customer.

12.5.10. To the touch screen and display size of different products: The defects of TFT screen are determined according to the corresponding TFT screen size.; The defects in TP VA area are determined according to the corresponding criteria of the corresponding VA area, and the outside of the VA area is determined by the dimension standard.

12.6. Defects and Acceptance Standards

12.6.1 Function defect for TP

12.6.1 Electrical properties test

Check in ODNA tester. The program will release result automatically. There are “OK”、“PASS”、“NG” and the final judgment must be “OK” “PASS”, and we need to pass the draw line test.

Refer to 《**series IC test program》

12.7. Others

Items not specified in this document or released on compromise should be inspected with reference to mutual agreement and limit samples.

13. HANDLING PRECAUTIONS

13.1 Mounting method

The LCD module consists of two thin glass plates with polarizers which easily be damaged. And since the module is so constructed as to be fixed by utilizing fitting holes in the printed circuit board.

Extreme care should be needed when handling the LCD modules.

13.2 Caution of LCD handling and cleaning

When cleaning the display surface, Use soft cloth with solvent [recommended below] and wipe lightly :

- .Isopropyl alcohol
- .Ethyl alcohol

Do not wipe the display surface with dry or hard materials that will damage the polarizer surface.

Do not use the following solvent :

- .Water
- .Aromatics

Do not wipe ITO pad area with the dry or hard materials that will damage the ITO patterns

Do not use the following solvent on the pad or prevent it from being contaminated :

- .Soldering flux
- .Chlorine (Cl) , Sulfur (S)

If goods were sent without being silicon coated on the pad, ITO patterns could be damaged due to the corrosion as time goes on.

If ITO corrosion happen by miss-handling or using some materials such as Chlorine (Cl), Sulfur (S) from customer, Responsibility is on customer.

13.3 Caution against static charge

The LCD module use C-MOS LSI drivers, so we recommended that you :

Connect any unused input terminal to Vdd or Vss, do not input any signals before power is turned on, and ground your body, work/assembly areas, assembly equipment to protect against static electricity.

13.4 Packing

Module employ LCD elements and must be treated as such.

- .Avoid intense shock and falls from a height.
- .To prevent modules from degradation, do not operate or store them exposed direct to sunshine or high temperature/humidity.

13.5 Caution for operation

- .It is an indispensable condition to drive LCD's within the specified voltage limit since the higher voltage then the limit cause the shorter LCD life.
- .An electrochemical reaction due to direct current causes LCD's undesirable deterioration, so that the use of direct current drive should be avoided.
- .Response time will be extremely delayed at lower temperature then the operating temperature range and on the other hand at higher temperature LCD's show dark color in them. However those phenomena do not mean malfunction or out of order with LCD's, which will come back in the specified operation temperature.
- .If the display area is pushed hard during operation, some font will be abnormally displayed but it resumes normal condition after turning off once.
- .A slight dew depositing on terminals is a cause for electro-chemical reaction resulting in terminal open circuit.
- .Usage under the maximum operating temperature, 50%Rh or less is required.
- .When fixed patterns are displayed for a long time, remnant image is likely to occur.

13.6 Storage

In the case of storing for a long period of time for instance, for years for the purpose or replacement use, the following ways are recommended.

- .Storing in an ambient temperature 10°C to 30°C, and in a relative humidity of 45% to 75%. Don't expose to sunlight or fluorescent light.
- .Storing in a polyethylene bag with the opening sealed so as not to enter fresh air outside in it . And with no desiccant.
- .Placing in a dark place where neither exposure to direct sunlight nor light's keeping the storage temperature range.
- .Storing with no touch on polarizer surface by anything else.

It is recommended to store them as they have been contained in the inner container at the time of delivery from us.

13.7 Safety

- .It is recommendable to crash damaged or unnecessary LCD's into pieces and wash off liquid crystal by

either of solvents such as acetone and ethanol, which should be burned up later.

- .When any liquid leaked out of a damaged glass cell comes in contact with your hands, please wash it off well with soap and water.

14. PRECAUTION FOR USE

14.1 A limit sample should be provided by the both parties on an occasion when the both parties agreed its necessity. Judgment by a limit sample shall take effect after the limit sample has been established and confirmed by the both parties.

14.2 On the following occasions, the handing of problem should be decided through discussion and agreement between responsible of the both parties.

- .When a question is arisen in this specification.
- .When a new problem is arisen which is not specified in this specifications.
- .When an inspection specifications change or operating condition change in customer is reported to ODNA, and some problem is arisen in this specification due to the change.
- .When a new problem is arisen at the customer's operating set for sample evaluation in the customer site.
