

High Dynamic Range, 2 Channel IF Amplifier with Power Control 100 - 400 MHz

**AM55-0024
V7**

Features

- Attenuation: 0.5 dB steps to 31.5 dB
- 6 Bit Digital Gain Control
- CMOS Logic
- Serial Logic Interface
- Single Positive Voltage Supply
- 8 mm PBGA Package
- JEDEC MO-151 Footprint
- Single Package Solution for GSM,CDMA,PCS

Description

The M/A-COM AM55-0024 is a dual channel IF amplifier and digital attenuator packaged in a multi-layer multi-chip module (MCM). Gain control is via two separate serial logic interfaces. The part utilizes Plastic Ball Grid Array (PBGA) interconnect technology to achieve high circuit density and superior performance. This device is ideal for GSM/DCS/PCS digital base station applications where high dynamic range gain control is required.

Absolute Maximum Ratings^{4,5,6}

Parameter	Absolute Maximum
Input Power ³	+20 dBm
Operating Voltage ³	V _{DD} = +6 V
Operating Temperature	-40°C to +85°C
Storage Temperature	-65°C to +150°C

- Exceeding any one or combination of these limits may cause permanent damage to this device.
- M/A-COM does not recommend sustained operation near these survivability limits.
- Ambient Temperature (T_A) = +25°C.

Serial Interface

Each channel in the AM55-0024 is independently controllable with a 3 wire serial interface: Clock, Data, and Latch Enable. These lines can be shared based on application requirements. The attenuator within the device is controlled with a 6 bit word, enabling the selection of 64 possible states. The highest gain state is '000000', and the lowest is '111111'. The sequence for shifting the data is as follows: Present data (Least significant bit first), strobe clock, repeat until 6 bits have been presented and clocked, then strobe the latch enable line, which implements the state change.

Figure 1: Mechanical drawing of the component. The drawing includes a top view, a side view, and a detail view of the solder ball array. The top view shows a square component with a side length of 3150/8. It features an 'A1 ORIENTATION MARK' and a 'SEATING PLANE'. The side view shows a thickness of 0669 MAX. and 1.70. The detail view shows a 12x12 array of solder balls with a pitch of 0315/0.8. The detail view also shows a 64X 0.197 ± 0.02 0.5 ± 0.05 SOLDER BALL. The drawing includes various tolerances and surface finish symbols.
