SILICON LABS
400 West Cesar Chavez
Austin, TX 78701

April 20,2017

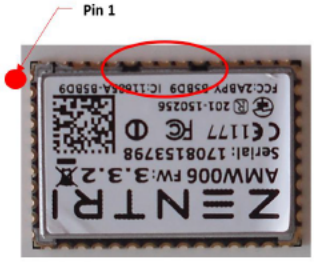

Module devices AMW006 and AMW106 from Silicon Labs have been shipped using 2 different marking label orientations. This may create confusion when trying to identify the pin 1 during orientation of the module and possible misorientation of the modules during surface mount.

There are two possible label orientations as described below. The location of pin 1 should always be determined by the antenna pins 47 and 43 which show as notches in surrounding soldered ground pins.

Standard Label Orientation

Alternative Label Orientation

All shipments after 20 April 2017 will carry the Standard Label Orientation to help avoid any confusion in the future.

Silicon Labs regrets the inconvenience this issue may have caused and is proactively taking steps to minimize the impact to you. Please contact your local sales representative if you have any questions or concerns regarding this issue.
