Bobbintron Electrical Corporation

We prompt your power supply design

To a Hi-end age of

Wizardry** and **Gadgetry

Forewords of Management

Bobbintron focus on designing unique and high-end product lineups or custom made power supply to meet certain particular requirements. Within the last 5 years we have completed several micro-controlled intelligent power supply units for specific application.

Our goal is to meet special requirements of customer specification with our resource of firmware programmer and circuitry designer all over the world. To highlight our achievement over the years, for several instances you may find in the following pages of this brochure, we have several top notch designs given pride to our capability.

To our micro-controller firmware programmer, the benefits of build-in micro-controller brings solutions to all kinds of electronic constraints and break the limitation to the farthest ends of possibility and feasibility. When $\pm 1\%$ output voltage or current tolerance constraint is the unconquerable limit of components' limitation, micro-controller came in and took over the tough functionality to cover up the impossible with "nothing is impossible".

Bobbintron's resource consolidates multi-national talented designers with a common belief of building things with thinking outside the box. We strongly believe in **Versatility**, **Originality** and **Creativity** is the only route to Uniqueness and the best means of survival in the harsh competition nature of electronic industry.

When you are building hi-end electronic devices you may leave 2 or 3 signals expecting to communicate with power supply unit to enable a better power source with good tolerance of voltage protection and or overload protection. This trend will expand as we believe the more delicate of battery technologies it will become, the more sophisticate protection it will be required from the power unit. Power supply has come to an age of interactive era.

We believe our effort to devote more resource into the micro-controlled power supply will pay off with more customers and business as this is a flow no one can avoid.

Another Bobbintron's core competency lies at our sourceful strength on allocating all sorts of components for RF, wireless transceiver, receiver device, low to high frequency antenna, special SMA, MMCX, SSMB, TNC,.....coaxial connectors or cable assembly which are familiar and experienced by our engineers. We knew most of where the screw machinery, tool house where and we vertically integrated our resource to help customer easily get what they need most but not standard assembly. Bobbintron therefore gained more than 30% revenue out of this particular system integration.

BOBBINTRON ELECTRICAL CORPORATION

A few Snapshots over Production facility in China

Product Outline: Battery Fuel Gauge

Micro-controlled

Features

Monitors 12 volt battery charge level.
Accurate during loaded, unloaded, and charging states.
Constant battery monitoring. Always on whenever connected.
Low current draw - <5 mA.
Can be used on any capacity 12 volt battery.
Works in cold temperatures - Down to -20° C - Storage to -40° C.
Water-proof construction

Arrow shows charge mode

Up = Charge Mode
Down = Discharge Mode
No Arrow = Steady Mode

Large Display
LCD or Bright LED

Epoxy filled for
all weather protection

Alligator Clips

Operation

- Connection to battery positive and negative will show battery charge level percentage.
- A CPU will look at the battery voltage vs change over time and determine the proper state of steady, rising, or falling.
- Steady voltage will show no arrow. Steady Mode
- Falling voltage will show a DOWN arrow. Discharge Mode
- Rising voltage will show an UP arrow. Charge Mode
- Percentage value displayed will change based on different Mode. it is based on dv/dt change
 - 1-In steady Mode the capacity display the approximate capacity value. ex: 12.5V = 50% capacity
 - 2-When the State change to Discharge or Charge Mode, the capacity don't change instantiously
The voltage could change instantiously, but the capacity will remain constant. then follow a slope
This function compensate for different Discharge or Charge current, Capacity is related to dv/dt
 - 3-Above 13volts is considered in Charging Mode.
- A battery could be charged even at 13.5volts, and should show 100% after a while. it will take longer time then if the charging voltage is 14.5Volts.

Micro-controlling Features

- A) - CPU detects short rapid voltage drop as battery becomes loaded.
Mode is changed to Discharge. The capacity remain the same for rapid change to red line, then follow a specific slope for decreasing the capacity.
 - B) - CPU detects a short rise in voltage as the load is removed from the battery.
Mode is changed to Steady. The capacity remain the same for short rise Voltage to red line
 - C) - CPU detects rise in voltage as charge is applied.
Mode is changed to Charge. The capacity remain the same in the short rise
Then gradually capacity increase to a specific slope
 - D) - CPU detects voltage drop as charger is removed or switches to float mode. Capacity remains
- The Charge mode remains if the voltage is higher than 13V then change to Steady Mode

Voltage	Steady Mode	Discharge Mode or Charge Mode
<10.5	0	
10.5	0	Capacity = $a \cdot dv + P_{cap}$, for charge and discharge Mode
10.6	0	
10.7	0	a = slope factor,
10.8	0	dv = Previous voltage - actual voltage; if $dv > \text{fixed level}$, $dv = 0$
10.9	0	if dv negative, it is a discharge voltage
11.0	0	if dv positive, then $dv = (dv + \text{factor})$ it is charge Mode
11.1	0	factor is to increase capacity when charge voltage stable <14.5V

PSS25-1212 Micro-Controlled Smart Charger (Design for **Emerson, Not for sale**) *Output voltage is driven by auto-sensing signal from device and micro-processor.*

Micro-controlled

Electrical specifications :

Input:

Voltage..... 100-240VAC

Current.....1.2A rms Max

Frequency.....50-60 Hz

Output:

Voltage (Vo)..... (see table)

Tolerance.....+/- 5%

Power (Po).....25W

Hold up time.....8mS min at Full Load, 115VAC

Over voltage protection.....Built-in

Short circuit protection.....Hiccup Mode, Auto Recovery

Efficiency.....70% min, at Full Load and 115VAC

Ripple/Noise (Vp-p).....2% (20M Hz Bandwidth)

Calculated MTBF..... Over 100 Khr at 25C

Feature:

Universal Input 100V to 240VAC

IEC Socket C8 Input

With Micro Controller Function

Charger for Ni-Mh, Ni-Cd ceCell

Smart Charger (Auto Sensing)

Environmental :

Operating Temperature:

0 deg. C to 40 deg. C ambient

Storage Temperature:

-20 deg. C to 80 deg.C

Output Electronic Specifications:

Wireless Transmitter for iPod/ iPod Mini

- Dimensions: 51.6 (L) x 26.5(W) x 14.5(T)mm without counting earphone plug.
- Color: Pure Apple White
- Built-in Antenna
- Power Requirement: Supplied by iPod connection.
- Modulation: FM stereo
- Frequencies: ch.1@88.2 /ch.2@ 88.6 /ch.3@ 89 MHz(for Japan) 3 band adjusted by manual switch built on front right side. With silk screen indication. Ch.1@ 88.3, ch.2@ 88.7 and ch.3@ 88.9MHz(for USA & Europe) as from bottom to top indicated beside the manual switch.
- Stereo separation: Greater than 45 dB
- Signal Distortion: Less than .5%
- Frequency response: 50Hz to 15 kHz
- Operating Range Availability: 10~30 ft(Limited by FCC regulation)
- International frequencies software selectable.

Blister package for Retailer's choice.
