

3.3 V 'SpreadTrak' Zero Delay Buffer

Features

- Zero input - output propagation delay, adjustable by capacitive load on FBK input.
- Multiple configurations - Refer "ASM5P23S04A Configurations Table".
- Input frequency range: 10MHz to 133MHz
- Multiple low-skew outputs.
- Output-output skew less than 200 ps.
- Device-device skew less than 500 ps.
- Two banks of four outputs.
- Less than 200 ps cycle-to-cycle jitter
- Available in space saving, 8-pin 150-mil SOIC packages.
- 3.3V operation.
- Advanced 0.35 μ CMOS technology.
- Industrial temperature available.
- 'SpreadTrak'

Functional Description

ASM5P23S04A is a versatile, 3.3V zero-delay buffer designed to distribute high-speed clocks in PC, workstation, datacom, telecom and other high-performance applications. It is available in a 8-pin package. The part has an on-chip PLL which locks to an input clock presented on the REF pin. The PLL feedback is required to be driven to

FBK pin, and can be obtained from one of the outputs. The input-to-output propagation delay is guaranteed to be less than 250ps, and the output-to-output skew is guaranteed to be less than 200ps.

The ASM5P23S04A has two banks of two outputs each. Multiple ASM5P23S04A devices can accept the same input clock and distribute it. In this case the skew between the outputs of the two devices is guaranteed to be less than 500ps.

The ASM5P23S04A is available in two different configurations (Refer "ASM5P23S04A Configurations Table"). The ASM5P23S04A-1 is the base part, where the output frequencies equal the reference if there is no counter in the feedback path. The ASM5P23S04A-1H is the high-drive version of the -1 and the rise and fall times on this device are much faster.

The ASM5P23S04A-2 allows the user to obtain Ref, 1/2 X and 2X frequencies on each output bank. The exact configuration and output frequencies depend on which output drives the feedback pin. The ASM5P23S04A-5H is a high-drive version with REF/2 on both banks

Block Diagram

rev 2.0

ASM5P23S04A Configurations

Device	Feedback From	Bank A Frequency	Bank B Frequency
ASM5P23S04A-1	Bank A or Bank B	Reference	Reference
ASM5P23S04A-1H	Bank A or Bank B	Reference	Reference
ASM5P23S04A-2	Bank A	Reference	Reference /2
ASM5P23S04A-2	Bank B	2 X Reference	Reference
ASM5P23S04A-5H	Bank A or Bank B	Reference /2	Reference /2

‘SpreadTrak’

Many systems being designed now utilize a technology called Spread Frequency Timing Generation. ASM3P23S04A is designed so as not to filter off the Spread Spectrum feature of the Reference input, assuming it exists. When a zero

delay buffer is not designed to pass the Spread Spectrum feature through, the result is a significant amount of tracking skew which may cause problems in the systems requiring synchronization.

Zero Delay and Skew Control

For applications requiring zero input-output delay, all outputs must be equally loaded.

REF Input to CLKA/CLKB Delay Vs Difference in Loading between FBK pin and CLKA/CLKB pins

rev 2.0

To close the feedback loop of the ASM5P23S04A, the FBK pin can be driven from any of the four available output pins. The output driving the FBK pin will be driving a total load of 7 pF plus any additional load that it drives. The relative loading of this output (with respect to the remaining outputs) can adjust the input output delay. This is shown in the above graph.

For applications requiring zero input-output delay, all outputs including the one providing feedback should be equally loaded. If input-output delay adjustments are required, use the above graph to calculate loading differences between the feedback output and remaining outputs. For zero output-output skew, be sure to load outputs equally.

Pin Configuration

Pin Description for ASM5P23S04A

Pin #	Pin Name	Description
1	REF ¹	Input reference frequency, 5V tolerant input
2	CLKA1 ²	Buffered clock output, bank A
3	CLKA2 ²	Buffered clock output, bank A
4	GND	Ground
5	CLKB1 ²	Buffered clock output, bank B
6	CLKB2 ²	Buffered clock output, bank B
7	V _{DD}	3.3V supply
8	FBK	PLL feedback input

Notes:

1. Weak pull-down.
2. Weak pull-down on all outputs.

**Absolute Maximum Ratings**

Parameter	Min	Max	Unit
Supply Voltage to Ground Potential	-0.5	+7.0	V
DC Input Voltage (Except REF)	-0.5	$V_{DD} + 0.5$	V
DC Input Voltage (REF)	-0.5	7	V
Storage Temperature	-65	+150	°C
Max. Soldering Temperature (10 sec)		260	°C
Junction Temperature		150	°C
Static Discharge Voltage (per MIL-STD-883, Method 3015)		>2000	V
Note: These are stress ratings only and functional usage is not implied. Exposure to absolute maximum ratings for prolonged periods can affect device reliability.			

Operating Conditions for ASM5P23S04A Commercial Temperature Devices

Parameter	Description	Min	Max	Unit
V_{DD}	Supply Voltage	3.0	3.6	V
T_A	Operating Temperature (Ambient Temperature)	0	70	°C
C_L	Load Capacitance, below 100 MHz		30	pF
C_L	Load Capacitance, from 100 MHz to 133 MHz		15	pF
C_{IN}	Input Capacitance ³		7	pF

Note: 3. Applies to both Ref Clock and FBK.

Electrical Characteristics for ASM5P23S04A Commercial Temperature Devices

Parameter	Description	Test Conditions	Min	Max	Unit
V_{IL}	Input LOW Voltage			0.8	V
V_{IH}	Input HIGH Voltage		2.0		V
I_{IL}	Input LOW Current	$V_{IN} = 0V$		50.0	μA
I_{IH}	Input HIGH Current	$V_{IN} = V_{DD}$		100.0	μA
V_{OL}	Output LOW Voltage ⁴	$I_{OL} = 8mA (-1, -2)$ $I_{OH} = 12mA (-1H, -5H)$		0.4	V
V_{OH}	Output HIGH Voltage ⁴	$I_{OL} = -8mA (-1, -2)$ $I_{OH} = -12mA (-1H, -5H)$	2.4		V
I_{DD}	Supply Current	Unloaded outputs 100MHz REF, Select inputs at V_{DD} or GND		TBD	mA
				TBD	
		Unloaded outputs, 66MHz REF (-1, -2)		TBD	
		Unloaded outputs, 33MHz REF (-1, -2)		TBD	

Note: 4. Parameter is guaranteed by design and characterization. Not 100% tested in production.

5. REF Input $V_{th} = \sim V_{DD}/2$
