Section 1

Overview

1.1 Scope

The AT91SAM9G20-EK Evaluation Kit enables the evaluation of and code development for applications running on an AT91SAM9G20 device. This guide focuses on the AT91SAM9G20-EK board as an evaluation platform. The board supports the AT91SAM9G20 in a 217-ball LFBGA RoHS-compliant Package.

1.2 Deliverables

The AT91SAM9G20-EK package contains the following items:

- an AT91SAM9G20-EK board
- a universal input AC/DC power supply with US and Europe plug adapter
- one A/B-type USB cable
- one serial RS232 cable
- one RJ45 crossed Ethernet cable
- one CD-ROM that allows the user to begin evaluating the AT91 ARM® Thumb® 32-bit microcontroller quickly
- one 3V Lithium battery

1.3 AT91SAM9G20-EK Evaluation Board

The board is equipped with an AT91SAM9G20 microcontroller together with the following:

- 64 Mbytes of SDRAM memory
- 256 Mbytes of NAND Flash memory
- one Atmel® serial DataFlash®
- one Atmel TWI serial EEPROM
- one USB Device port interface
- two USB Host port interfaces
- one DBGU serial communication port
- one complete MODEM serial communication port
- one additional serial communication port with RTS/CTS handshake control
- JTAG/ICE debug interface
- one PHY Ethernet 100-base TX with three status LEDs
- one on-board Audio DAC
- one Power LED and one general-purpose LED

Overview

- two user-input push buttons
- one Wakeup-input push button
- one reset push button
- two DataFlash SD/MMC card slots
- four expansion connectors (PIOA, PIOB, PIOC, IMAGE SENSOR)
- one BGA-like EBI expansion footprint connector
- one Lithium Coin Cell Battery Retainer for 12 mm cell size

Section 2

Setting Up the AT91SAM9G20-EK Board

2.1 Electrostatic Warning

The AT91SAM9G20-EK evaluation board is shipped in protective anti-static packaging. The board must not be subjected to high electrostatic potentials. A grounding strap or similar protective device should be worn when handling the board. Avoid touching the component pins or any other metallic element.

2.2 Requirements

In order to set up the AT91SAM9G20-EK evaluation board, the following items are needed:

- the AT91SAM9G20-EK evaluation board itself,
- AC/DC power adapter (5V at 2A), 2.1 mm by 5.5 mm.

2.3 Layout

Figure 2-1. Top View

Figure 2-2. Bottom View

2.4 Powering Up the Board

The AT91SAM9G20-EK requires 5V DC ($\pm 5\%$). DC power is supplied to the board via the 2.1 mm by 5.5 mm socket J1. Coaxial plug center positive standard.

2.5 Backup Power Supply

The user can plug in a battery (3V Lithium Battery CR1225 or equivalent) in order to permanently power the backup part of the device. In this case, J10 configuration must be set in position 1, 2. Refer to [Section 4.1 "Jumpers"](#).

2.6 Getting Started

The AT91SAM9G20-EK evaluation board is delivered with a CD-ROM containing all necessary information and step-by-step procedures for working with the most common development tools.

2.7 AT91SAM9G20-EK Block Diagram

Figure 2-3. AT91SAM9G20-EK Block Diagram

3.1 AT91SAM9G20 Microcontroller

- Incorporates the ARM926EJ-S™ ARM® Thumb® Processor
 - DSP Instruction Extensions, ARM Jazelle® Technology for Java® Acceleration
 - 32-KByte Data Cache, 32-KByte Instruction Cache, Write Buffer
 - CPU Frequency 400 MHz
 - Memory Management Unit
 - EmbeddedICE™, Debug Communication Channel Support
- Additional Embedded Memories
 - One 64-KByte Internal ROM, Single-cycle Access at Maximum Matrix Speed
 - Two 16-KByte Internal SRAM, Single-cycle Access at Maximum Matrix Speed
- External Bus Interface (EBI)
 - Supports SDRAM, Static Memory, ECC-enabled NAND Flash and CompactFlash®
- USB 2.0 Full Speed (12 Mbps per second) Device Port
 - On-chip Transceiver, 2,432-byte Configurable Integrated DPRAM
- USB 2.0 Full Speed (12 Mbps per second) Host and Double Port
 - Single or Dual On-chip Transceivers
 - Integrated FIFOs and Dedicated DMA Channels
- Ethernet MAC 10/100 Base T
 - Media Independent Interface or Reduced Media Independent Interface
 - 128-byte FIFOs and Dedicated DMA Channels for Receive and Transmit
- Image Sensor Interface
 - ITU-R BT. 601/656 External Interface, Programmable Frame Capture Rate
 - 12-bit Data Interface for Support of High Sensibility Sensors
 - SAV and EAV Synchronization, Preview Path with Scaler, YCbCr Format
- Bus Matrix
 - Six 32-bit-layer Matrix
 - Boot Mode Select Option, Remap Command
- Fully-featured System Controller, including
 - Reset Controller, Shutdown Controller
 - Four 32-bit Battery Backup Registers for a Total of 16 Bytes
 - Clock Generator and Power Management Controller
 - Advanced Interrupt Controller and Debug Unit
 - Periodic Interval Timer, Watchdog Timer and Real-time Timer
- Reset Controller (RSTC)
 - Based on a Power-on Reset Cell, Reset Source Identification and Reset Output Control
- Clock Generator (CKGR)
 - Selectable 32,768 Hz Low-power Oscillator or Internal Low Power RC Oscillator on Battery Backup Power Supply, Providing a Permanent Slow Clock
 - 3 to 20 MHz On-chip Oscillator, One up to 800 MHz PLL and One up to 100 MHz PLL

- **Power Management Controller (PMC)**
 - Very Slow Clock Operating Mode, Software Programmable Power Optimization Capabilities
 - Two Programmable External Clock Signals
- **Advanced Interrupt Controller (AIC)**
 - Individually Maskable, Eight-level Priority, Vectored Interrupt Sources
 - Three External Interrupt Sources and One Fast Interrupt Source, Spurious Interrupt Protected
- **Debug Unit (DBGU)**
 - 2-wire UART and Support for Debug Communication Channel, Programmable ICE Access Prevention
- **Periodic Interval Timer (PIT)**
 - 20-bit Interval Timer plus 12-bit Interval Counter
- **Watchdog Timer (WDT)**
 - Key-protected, Programmable Only Once, Windowed 16-bit Counter Running at Slow Clock
- **Real-time Timer (RTT)**
 - 32-bit Free-running Backup Counter Running at Slow Clock with 16-bit Prescaler
- **One 4-channel 10-bit Analog-to-Digital Converter**
- **Three 32-bit Parallel Input/Output Controllers (PIOA, PIOB, PIOC)**
 - 96 Programmable I/O Lines Multiplexed with up to Two Peripheral I/Os
 - Input Change Interrupt Capability on Each I/O Line
 - Individually Programmable Open-drain, Pull-up Resistor and Synchronous Output
 - All I/O Lines are Schmitt Trigger Inputs
- **Peripheral DMA Controller Channels (PDC)**
- **One Two-slot MultiMedia Card Interface (MCI)**
 - SDCard/SDIO and MultiMediaCard™ Compliant
 - Automatic Protocol Control and Fast Automatic Data Transfers with PDC
- **One Synchronous Serial Controller (SSC)**
 - Independent Clock and Frame Sync Signals for Each Receiver and Transmitter
 - I²S Analog Interface Support, Time Division Multiplex Support
 - High-speed Continuous Data Stream Capabilities with 32-bit Data Transfer
- **Four Universal Synchronous/Asynchronous Receiver Transmitters (USART)**
 - Individual Baud Rate Generator, IrDA® Infrared Modulation/Demodulation, Manchester Encoding/Decoding
 - Support for ISO7816 T0/T1 Smart Card, Hardware Handshaking, RS485 Support
 - Full Modem Signal Control on USART0
- **Two 2-wire UARTs**
- **Two Master/Slave Serial Peripheral Interfaces (SPI)**
 - 8- to 16-bit Programmable Data Length, Four External Peripheral Chip Selects
 - Synchronous Communications
- **Two Three-channel 16-bit Timer/Counters (TC)**
 - Three External Clock Inputs, Two Multi-purpose I/O Pins per Channel
 - Double PWM Generation, Capture/Waveform Mode, Up/Down Capability
 - High-Drive Capability on Outputs TIOA0, TIOA1, TIOA2
- **One Two-wire Interface (TWI)**
 - Compatible with Standard Two-wire Serial Memories
 - One, Two or Three Bytes for Slave Address
 - Sequential Read/Write Operations
 - Master, Multi-master and Slave Mode Operation
 - Bit Rate: Up to 400 Kbits
 - General Call Supported in Slave Mode
 - Connection to Peripheral DMA Controller (PDC) Channel Capabilities Optimizes Data Transfers in Master Mode

- IEEE® 1149.1 JTAG Boundary Scan on All Digital Pins
- Required Power Supplies
 - 0.9V to 1.1V for VDDBU, VDDCORE, VDDPLL
 - 1.65 to 3.6V for VDDOSC
 - 1.65V to 3.6V for VDDIOP (Peripheral I/Os)
 - 3.0V to 3.6V for VDDUSB
 - 3.0V to 3.6V VDDANA (Analog-to-digital Converter)
 - Programmable 1.65V to 1.95V or 3.0V to 3.6V for VDDIOM (Memory I/Os)
- Available in a 217-ball LFBGA RoHS-compliant Package

[illegible]

3.3 Microcontroller

- One 217-ball LFBGA fitted on board

3.4 Memory

- 32 Kbytes of Internal ROM
- Two 4-KByte Internal SRAMs
- Atmel serial DataFlash
- 64 Mbytes of SDRAM memory (32-bit bus width)
- 256 Mbytes of NAND Flash memory (8-bit bus width)
- TWI serial EEPROM

3.5 Clock Circuitry

- 18.432 MHz standard crystal for the embedded oscillator
- Selectable 32,768Hz Low-power external standard crystal Oscillator or Internal Low Power RC Oscillator

3.6 Reset Circuitry

- Internal reset controller with bi-directional reset pin
- External reset pushbutton

3.7 Shutdown Controller

- Programmable shutdown and Wake-Up
- Wake-up push button

3.8 Power Supply Circuitry

- On-board 1.0V High Efficiency step-down charge pump regulator with shutdown control
- On-board 3.3V linear regulator with shutdown control
- On-board power sequencer

3.9 Remote Communication

- One serial interface (DBGU COM Port) via RS-232 DB9 male socket
- One complete modem serial interface (COM Port 0) via RS-232 DB9 male socket
- One additional serial interface (COM Port 1) with RTS/CTS handshake control via RS-232 DB9 male socket
- USB V2.0 full-speed compliant, 12 Mbits per second (UDP)
- Two USB Host ports V2.0 full-speed compliant, 12 Mbits per second (UHP)

- One Ethernet 100-base TX with three status LEDs

3.10 Audio Stereo Interface

- Stereo Audio Codec with Integrated Headphone Driver (50 mW on 16W @ 3.3V)
- One Headset output (J4) with master volume and mute controls

3.11 User Interface

- Two user input push buttons
- One user green LED
- One yellow power LED (can be also software controlled)
- Debug Interface
- All I/Os of the AT91SAM9G20 are routed to peripheral extension connectors
- All I/Os of the AT91SAM9G20 Image Sensor Interface are routed to peripheral extension connectors
- All EBI Signals of the AT91SAM9G20 are routed to extension footprint connectors (J25)

3.12 Debug Interface

- 20-pin JTAG/ICE interface connector
- DBGU COM port

3.13 Expansion Slot

- One on-board DataFlash device
- Two SD/MMC card slots, the system can boot from slot J35
- All I/Os of the AT91SAM9G20 are routed to peripheral extension connectors
- All I/Os of the AT91SAM9G20 Image Sensor Interface are routed to peripheral extension connectors
- All EBI Signals of the AT91SAM9G20 are routed to extension footprint connectors (J25)

This allows the developer to check the integrity of the components and to extend the features of the board by adding external hardware components or boards.

3.14 PIO Usage

Table 3-1. I/O Peripheral Controller A

I/O Line	Peripheral A	Peripheral B	Comments	Function

Section 4

Configuration

4.1 Jumpers

Table 4-1. Jumpers Configuration

Designation	Default Setting	Feature
J2	Closed	3.3V Jumper ⁽¹⁾
J3	Closed	Forces power on. To use the software shutdown control: • J3 must be opened, • 3V battery backup must be present, • J10 jumper set in position 1-2
J6	Closed	VDDPLL Jumper ⁽¹⁾
J7	Open	Enables boot on the internal ROM
	Closed	Enables boot on the NCS0
J9	2-3	Slow Clock OSCSEL 1-2: Internal RC Oscillator 2-3: External Crystal Oscillator
J10	2-3	VDDBU Jumper select ⁽¹⁾ 1-2: Lithium 3V Battery 2-3: 1.0V from VDDCORE
J12	Closed	VDDCORE Jumper ⁽¹⁾
J15	Closed	Enables Ethernet Auto MDIX control
J33	Closed	Serial DataFlash chip select enable
J34	Closed	NAND Flash chip select enable

Note: 1. These jumpers are provided for power consumption measurement. By default, they are closed. To use this feature, the user has to open the strap and insert an ampere meter.

4.2 JTAG/ICE

Table 4-2. JTAG/ICE Configuration

Designation	Default Setting	Feature
S1	Opened	Disables the ICE NTRST input
S2	Opened	Selects ICE Debug Mode or JTAG Boundary Scan Mode
S3	Opened	Disables TCK <-> RTCK local loop. If S3 is closed, R13 must be unsoldered.
R13	Soldered	Enables the ICE RTCK return. S3 must be opened
R14	Soldered	Enables the ICE RTCK return. S3 must be opened

4.3 Microcontroller Clock

Table 4-3. Microcontroller Clock Configuration

Designation	Default Setting	Feature
R18/R20	Soldered	Enables the use of 18.432MHz crystal. If external clock is used, R18/R20 must be unsoldered and S4 closed.
S4	Opened	
J9		Slow Clock Setting. See Table 4-1 .

4.4 Memory

Table 4-4. Memory Configuration

Designation	Default Setting	Feature
SDRAM		
R31	Soldered	Enables MN7 Chip select access
R32	Soldered	Enables MN8 Chip select access
NAND Flash (MN6+x)		
J34	Closed	Enables the use of NAND Flash (MN6x)
R34	Soldered	Enables the use of Ready Busy signal
S6	Opened	Disables write protect
SERIAL DataFlash (MN9)		
J33	Soldered	Enable the use of the Serial DataFlash®(MN9)
S5	Opened	Disables write protect
TWI SERIAL EEPROM (MN10)		
R46	Soldered	Enables SCL access
R47	Soldered	Enables SDA access

4.5 Ethernet

RMII is the factory default mode. To evaluate the MII mode, the user has to unsolder R49, R50, R127 and close S7 and S8. When the RMII mode is used, the user can use the specific MII signals as PIO, but the following resistors must be unsoldered (R119 to R126).

Note that, by default, resistors R112 and R120 are not populated in order to avoid contention between the MII signals and the SD Card slot J35. If the Ethernet MII mode is implemented on the board, then you must not insert any card into slot J35. Otherwise, signal conflicts could occur and damage both the Ethernet controller and the SD Card.

4.6 Miscellaneous

Refer to “Board Layout - Top View” in [Section 5.1 "Schematics"](#) for the PIO Usage.

Section 5

Errata

6.1 Wrong Silkscreen of BB and 1.0V on the Board

There is a silkscreen reversion on the board, for the selection of the VDDBU source:

- On J10 position 1-2, the marking should be 'BB' for Battery Backup instead of '1.0V'
- On J10 position 2-3, the marking should be '1.0V' instead of 'BB'.

This erratum is not applicable for AT91SAM9G20-EK Rev. C and later versions.

6.2 Choice of an Oscillator Capacitance

For many reasons at the manufacturing level, Atmel does not specify any crystal references at the board design stage.

Because of that, the user can find an inconsistency in the value of the used capacitance of the 18.432 MHz crystal on each pin (C23, C24), and the nominal load capacitance of the crystal.

As a reminder, here is the way to select these values. The electrical parameter allows you to fit the right values provided by the crystal manufacturer - and not by Atmel. They are called "Load Capacitance" of the crystal. You have to take stray capacitances (package, socket, trace) into account in order to be close enough to the equivalent nominal Load Capacitance.

With the on-board HCM49-18.432MABJT crystal reference, 10 pF capacitances have been fitted on the 18.432 MHz crystal for a nominal 27 pF load capacitance.

6.3 SD Card Slots and Booting Capability

On the board, Slot J13 is incorrectly marked with a "bootable" mention (solder side). This should be applied to J35 instead. However, the schematic entitled "Memory" attached to this User Guide, in [Section 5.1 "Schematics"](#) does represent the correct location and marking.
