

2MHz, Operational Transconductance Amplifier (OTA)

The CA3080 and CA3080A types are Gatable-Gain Blocks which utilize the unique operational-transconductance-amplifier (OTA) concept described in Application Note AN6668, "Applications of the CA3080 and CA3080A High-Performance Operational Transconductance Amplifiers".

The CA3080 and CA3080A types have differential input and a single-ended, push-pull, class A output. In addition, these types have an amplifier bias input which may be used either for gating or for linear gain control. These types also have a high output impedance and their transconductance (g_M) is directly proportional to the amplifier bias current (I_{ABC}).

The CA3080 and CA3080A types are notable for their excellent slew rate ($50V/\mu s$), which makes them especially useful for multiplexer and fast unity-gain voltage followers. These types are especially applicable for multiplexer applications because power is consumed only when the devices are in the "ON" channel state.

The CA3080A's characteristics are specifically controlled for applications such as sample-hold, gain-control, multiplexing, etc.

Features

- Slew Rate (Unity Gain, Compensated). $50V/\mu s$
- Adjustable Power Consumption. $10\mu W$ to $30\mu W$
- Flexible Supply Voltage Range. $\pm 2V$ to $\pm 15V$
- Fully Adjustable Gain 0 to $g_M R_L$ Limit
- Tight g_M Spread:
 - CA3080. 2:1
 - CA3080A 1.6:1
- Extended g_M Linearity 3 Decades

Applications

- Sample and Hold
- Multiplexer
- Voltage Follower
- Multiplier
- Comparator

Absolute Maximum Ratings

Supply Voltage (Between V+ and V- Terminal)	36V
Differential Input Voltage	5V
Input Voltage	V+ to V-
Input Signal Current	1mA
Amplifier Bias Current (I_{ABC})	2mA
Output Short Circuit Duration (Note 1)	No Limitation

Operating Conditions

Temperature Range	
CA3080	0°C to 70°C
CA3080A	-55°C to 125°C

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

- Short circuit may be applied to ground or to either supply.
- θ_{JA} is measured with the component mounted on an evaluation PC board in free air.
