BASIC CONFIGURATIONS

The modules' addresses can be set freely from 0 to 31 regardless the mounting location. However, be sure not to use duplicated addresses. A 4-point analog I/O module occupies 2 addresses. E.g. when R8-SV4N is set to address 5, Input 1 and Input 2 are assigned to address 5, Input 3 and Input 4 are assigned to address 6. In this case, do not set other I/O modules to address 6.

■ HOW TO MOUNT THE MODULE ON DIN RAIL

• Web-Enabled RTU Modules

Position the upper hook at the rear on the DIN rail and push in the lower. When removing the module, push down the DIN rail adaptor utilizing a minus screwdriver and pull.

• I/O Module

Confirm that the locking clamps of the I/O module are set.
 Insert the module in parallel to the next one while aligning the grooves of both modules (A & B in the above figure).
 Maintain it perpendicularly to the rail.

More I/O modules can be added in the same manner.
