

Evaluating the Isolated RS-485 Repeater Using the **ADM2587E** 2.5 kV rms Signal and Power Isolated RS-485/RS-422 Transceiver with ± 15 kV ESD Protection

FEATURES

- 2.5 kV rms power and signal isolated RS-485/RS-422 transceiver
- PCB layout optimized for EN55022 radiated emissions according to the [AN-1349 Application Note](#)
- 4-layer PCB layout that minimizes PCB material cost
- Convenient connections for power and signal through screw terminal blocks
- Configured as half-duplex
- 5 V or 3.3 V V_{CC} operation
- Flow control circuit removes the requirement for jumper connections
- Test points for measuring all signals

EVALUATION KIT CONTENTS

EVAL-ADM2587EEB2Z

DOCUMENTS NEEDED

[AN-1349 Application Note](#)
[AN-1458 Application Note](#)
[ADM2582E/ADM2587E data sheet](#)

GENERAL DESCRIPTION

Use the [ADM2587E](#) isolated repeater evaluation board to easily evaluate the [ADM2587E](#) power and signal isolated RS-485/RS-422 transceiver. Screw terminal blocks provide convenient connections for the power and signal connections. The evaluation board does not require jumper connections because flow control is implemented with a high speed comparator circuit. The board is configured as half-duplex and has a 120 Ω termination resistor fitted on the receiver inputs. Test points are included on the power and signal lines on both sides of the isolation barrier.

The [ADM2587E](#) evaluation board is designed to reduce emissions generated by the high frequency switching elements used by the isoPower® technology to transfer power through the [ADM2587E](#) integrated transformer. The layout of the evaluation board uses the guidelines provided in the [AN-1349 Application Note](#), *PCB Implementation Guidelines to Minimize Radiated Emissions on the [ADM2582E/ADM2587E](#) RS-485/RS-422 Transceivers*.

REVISION HISTORY

4/2018—Revision 0: Initial Version

EVALUATION BOARD HARDWARE

TEST SETUP

Figure 2 shows the EVAL-ADM2587EEB2Z evaluation board. The evaluation board does not require jumper connections because flow control is implemented with an [ADCMP600](#) high speed comparator circuit. The board is configured as half-duplex and has a $120\ \Omega$ termination resistor fitted on the receiver inputs. Test points are included on the power and signal lines on both sides of the isolation barrier. Power the evaluation board with 3.3 V or 5 V on the P2 terminal block. Confirm basic operation of the evaluation board using a signal generator at the P1 terminal block. Refer to the Cable Connection and Bus Capacitance section for more information. Use an oscilloscope to confirm that the voltage waveforms at TP1 (A) and TP2 (B) match the output of the RS-485 repeater at TP10 (B) and TP11 (A).

CABLE CONNECTION AND BUS CAPACITANCE

Use the EVAL-ADM2587EEB2Z P1 and P3 terminal blocks to attach a Category 5e RS-485 cable to the [ADM2587E](#) A and B bus pins. Route the RS-485 cable to other RS-485 evaluation boards to create a multinode setup. Alternatively, use a signal generator to simulate bus differential voltage inputs to P1, as shown in Figure 2. In this configuration, insert a $1.5\ \text{nF}$ wire wound capacitor between the A and B connectors on both the P1 and P3 terminal blocks. This $1.5\ \text{nF}$ capacitor simulates the capacitance from 20 m of Category 5e RS-485 cable.

BOARD INTERNAL LAYER THICKNESS

The EVAL-ADM2587EEB2Z evaluation board consists of four layers. The spacing between the top and bottom layer is 1.6 mm. The EVAL-ADM2587EEB2Z printed circuit board (PCB) has a minimum distance of 0.4 mm of insulation along a bonded surface, meeting requirements for IEC 61010, third edition, and IEC 60950 isolation standards as described in the [AN-1109 Application Note](#), *Recommendations for Control of Radiated Emissions with iCoupler® Devices*.

OVERLAPPING STITCHING CAPACITOR

The evaluation board implements an embedded stitching capacitor structure. An embedded PCB capacitor is created when two metal planes in a PCB overlap each other and are separated by dielectric material. This embedded stitching capacitor is formed by extending the internal reference planes from the primary and secondary layers (which are used for creepage on the PCB surface) across the area. This capacitor provides a return path for high frequency common-mode noise currents across the isolation gap. The layout and implementation of embedded stitching capacitors is explained in detail in the [AN-0971 Application Note](#).

PCB LAYOUT RECOMMENDATIONS

The EVAL-ADM2587EEB2Z evaluation board reduces emissions generated by the high frequency switching elements used by the *isoPower* technology to transfer power through the [ADM2587E](#) integrated transformer. The layout of the evaluation board is generated using the guidelines provided in the [AN-1349 Application Note](#).

The [AN-1349 Application Note](#) provides examples of 4-layer PCBs. The EVAL-ADM2587EEB2Z PCB layout is a 4-layer PCB.

To pass EN55022 Class B on a 4-layer PCB, the following layout guidelines are recommended:

1. Ensure that there is sufficient decoupling on the PCB. Use the decoupling capacitors recommended in Figure 4.
2. Place a ferrite bead between the PCB trace connections and the following IC pins: V_{ISOOUT} (Pin 12) and GND_2 (Pin 11 and Pin 14).
3. Do not connect the V_{ISOOUT} pin to a power plane; connect between V_{ISOOUT} and V_{ISOIN} using a PCB trace. Ensure that V_{ISOIN} (Pin 19) is connected through the E1 ferrite to V_{ISOOUT} (Pin 12).
4. Place an embedded stitching capacitor between the GND_1 and GND_2 pins using internal layers of the PCB planes (see the Overlapping Stitching Capacitor section).

The following additional notes apply to the PCB layout (refer to the Evaluation Board Schematics and Artwork section):

- Ensure that GND_2 (Pin 14) is connected to GND_2 (Pin 11) on the inside (device side) of the C5 100 nF capacitor.
- Ensure that the C5 100 nF capacitor is connected between V_{ISOOUT} (Pin 12) and GND_2 (Pin 11) on the device side of the E2 and E1 ferrites.
- Ensure that GND_2 (Pin 16) is connected to GND_2 (Pin 11) on the outside (bus side) of the E2 ferrite, as shown in Figure 3.
- Ensure that there is a keep out area for the GND_2 plane in the PCB layout around the E2 and E1 ferrites. The keep out area means there must not be a GND_2 fill on any layer below the E2 and E1 ferrites.

**ESD Caution**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
