

LC Sine Wave Filter for Motor Drives

- Smooth sine wave without voltage peaks
- Perfect motor protection
- Reduce bearing currents
- Motor frequency up to 200 Hz
- Extended motor cable length capability

Performance indicators

Technical specifications

Nominal operating voltage	3x 500 VAC $\pm 10\%$
Motor frequency	70 Hz (up to 200Hz with derating (see graph))
Switching frequency	See filter selection table
Rated currents	4.5 to 1200 A @ 45 °C max.
Motor cable length	Up to 2,000 m (see graph)
Impedance (uk)	8 to 10% @ 400 V, 50 Hz and rated current
Residual ripple voltage	<5%
High potential test voltage	P → E 3000 VAC, 1 minute P → P 2500 VAC, 1 minute
Protection category	IP00 (FN 5040) IP20 (FN 5045)
Overload capability	1.5x rated current for 1 minute, once per hour
Temperature range (operation and storage)	- 25 °C to +70 °C (25/070/21)
Acoustic noise level	<70 dB(A) @ 1 m
Insulation class	EIS 200
Flammability corresponding to	UL 94 V-2 or better
Design corresponding to	IEC 61558-2-20
Environmental reliability	IEC 60068-2-1
Approvals	UL 508 pending
Declaration of conformity	CE / LVD
MTBF 1	>100,000 hours

Approvals

UL508C up to 260 A. For use with AC or DC drives (power conversion equipment) only

Features and benefits

- Converts the rectangular PWM output voltage of motor drives into a smooth sine wave with low residual ripple
- Elimination of premature motor damage caused by high dv/dt, overvoltages, cable ringing, motor overheating, and eddy current losses
- Improves bearing life time because of bearing currents caused by circulating currents
- Complies with IEC 60034-17* and NEMA-MG1 requirements for general purpose motors
- Optional with NEMA 1 protective cover

Typical applications

- HVAC applications
- Pumps
- Ventilators
- Conveyors
- Compressors
- Elevators
- Cranes
- Medium voltage applications, deployed in front of the step-up transformer
- Retrofit installations with motor drives
- Motor drive with long motor cable
- Motor drive with multiple motors in parallel

Typical electrical schematic

Installation

Filter placement

Lift the filter with appropriate crane using lifting eye bolts – smaller types may be lifted manually by two persons (no lifting eye bolt applicable).

Wiring and connection

The filter rating has to be compatible with the inverter to which it is to be connected. All inverter manufacturer installation and safety instructions must be fulfilled. The typical block schematic is shown for a motor load but the load can be also multiple motors or a transformer. Inverter and load cable selection/placement should be in accordance with all local electrical standards and regulations. Filters with separate capacitor bank must be connected as follows:

Required settings

Ensure the drive's switching frequency is set to the required minimum switching frequency (see filter selection table). Higher frequencies are allowed. The mode of operation must be "scalar" (V/Hz). Check the inverter manual whether special settings are necessary. In any doubt contact the inverter manufacturer.

CAUTION: If the inverter settings are not in accordance the filter may be damaged.

Never attempt to handle the filter with a forklift!

In order to ensure sufficient air flow, keep a distance of 150 mm above and below the filter to walls or other components. A 20 mm distance on either side is recommended.
