

KYL-T206 Long Range Frequency Modulation Receiver

Technical Parameter:

Working voltage: 9V

Working frequency: 430.5MHz (Other frequency can be customized)

Stand-by current: 1mA

Working current: 400mA

Transmitting distance: >4000m (Receiving sensitivity is above -103dBm)

Output power: 32dBm (1600mW)

Transmitting speed: <10Kbps

Modulation Method: FSK (frequency modulation)

Working temperature: -20°C~+70°C

Size: 65mm×30mm×9mm

Diagrammatic introduction of pin:

Pin	Name	Function
1	ANT	antenna input
2	GND	cathode
3	KZHI	transmit control port (接9V 发射)
4	VCC	anode

Frame size diagram(mm):
