DESCRIPTION

LT-54B33B series is ITU-T G.983.3 Class B optical line terminal (OLT) for 622 Mbps/1490 nm in downstream and 155 Mbps/1310 nm in upstream. The transmitter section uses a multiple quantum well 1490 nm DFB laser and is a class 1 laser compliant according to International Safety Standard IEC-60825. The receiver section uses an integrated 1310 nm burst-mode detector preamplifier (IDP) mounted in an optical header and a burst-mode limiting post-amplifier IC. **Unlike the conventional BM RX, the RX does not requires reset pulse to receive optical data packets with different optical power.** LVPECL interface is used for differential inputs and outputs. A LVTTL logic interface simplifies interface to external circuitry.

LASER SAFETY

This single mode transceiver is a Class 1 laser product. It complies with IEC-60825 and FDA 21 CFR 1040.10 and 1040.11. The transceiver must be operated within the specified temperature and voltage limits. The optical ports of the module shall be terminated with an optical connector or with a dust plug.

APPLICATIONS

- ┌ B-PON System

RECOMMENDED CIRCUIT BOARD LAYOUT

Notes:

1. This figure describes the recommended circuit board layout for the SFF OLT Transceiver.
2. The hatched areas are keep-out areas reserved for housing standoff. No metal traces or ground connection in keep-out area.
3. The mounting studs should be solder to chassis ground for mechanical integrity.
