4194304-BIT (524288-WORD BY 8-BIT) CMOS STATIC RAM

DESCRIPTION

The M5M5V408B is a family of low voltage 4-Mbit static RAMs organized as 524,288-words by 8-bit, fabricated by Mitsubishi's high-performance 0.25µm CMOS technology.

The M5M5V408B is suitable for memory applications where a simple interfacing , battery operating and battery backup are the important design objectives.

M5M5V408B is packaged in 32-pin plastic SOP, 32-pin plastic TSOP and 32-pin 8mm x 13.4mm STSOP packages. Two types of TSOPs and two types of STSOPs are available, M5M5V408BTP (normal-lead-bend TSOP), M5M5V408BRT (reverse-lead-bend TSOP), M5M5V408BKV (normal-lead-bend STSOP) and M5M5V408BKR (reverse-lead-bend STSOP). These two types TSOPs and two types STSOPs are suitable for a surface mounting on double-sided printed circuit boards.

From the point of operating temperature, the family is divided into three versions; "Standard", "W-version", and "I-version". Those are summarized in the part name table below.

FUNCTION

The M5M5408BFP,TP,RT,KV,KR is organized as 524,288-words by 8-bit. These devices operate on a single +2.7~3.6V power supply, and are directly TTL compatible to both input and output. Its fully static circuit needs no clocks and no refresh, and makes it useful.

A write operation is executed during the $\overline{S}$ low and $\overline{W}$ low overlap time. The address(A0~A18) must be set up before the write cycle

A read operation is executed by setting $\overline{W}$ at a high level and $\overline{OE}$ at a low level while S are in an active state($\overline{S}$=L).

When setting $\overline{S}$ at a high level, the chips are in a non-selectable mode in which both reading and writing are disabled. In this mode, the output stage is in a high-impedance state, allowing OR-tie with other chips. Setting the $\overline{OE}$ at a high level,the output stage is in a high-impedance state, and the data bus contention problem in the write cycle is eliminated.

The power supply current is reduced as low as 0.3µA(25°C, typical), and the memory data can be held at +2V power supply, enabling battery back-up operation during power failure or power-down operation in the non-selected mode.

Note 3: Hatching indicates the state is "don't care".

Note 4: A Write occurs during the overlap of a low $\overline{S}$ and a low $\overline{W}$.

Note 5: If $\overline{W}$ goes low simultaneously with or prior to $\overline{S}$,the output remains in the high impedance state.

Note 6: Don't apply inverted phase signal externally when DQ pin is in output mode.
