Description

M/A-COM's MASWSS0069 is a GaAs PHEMT MMIC single pole double throw (SPDT) switch in a low cost miniature 4 mm FQFP-N 20 Lead package. The MASWSS0069 is ideally suited for applications where low control voltage, low insertion loss, high isolation, small size and low cost are required. A typical application is to replace mechanical relays in CATV systems. This device has an additional state where both arms are off and the device maintains a terminated and isolated state. This state is achieved using a third control line. The MASWSS0069 can be used in all 75 ohm systems operating up to 1 GHz.

The MASWSS0069 is fabricated using a 0.5 micron gate length GaAs PHEMT process. The process features full passivation for performance and reliability.

Handling Procedures

The following precautions should be observed to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are ESD sensitive and can be damaged by static electricity. Proper ESD techniques should be used when handling these devices.
