TIMER Timer

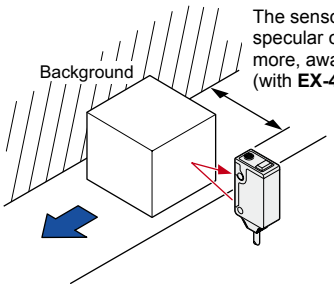

Reliable object detection in limited area

Stable convergent distance sensing

Due to convergent distance sensing, the color or material of the object has almost no effect. Further, the background also has very little effect, enabling stable sensing.

EX-43: Correlation between material and sensing range

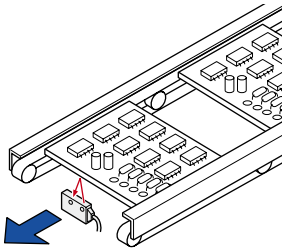

The sensor does not detect even a specular object 100 mm 3.937 in, or more, away from the sensing surface. (with **EX-43**)

However, the specular background should be a plane surface, directly facing the sensor. A spherical or curved background may be detected.

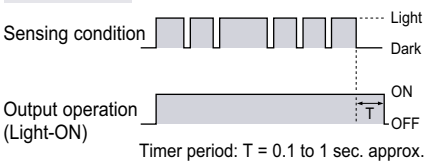

FUNCTIONS

Variable OFF-delay timer — EX-43T

The spot-beam type **EX-43T** is incorporated with an OFF-delay timer. The variable OFF-delay timer is useful for detecting a printed circuit board regardless of small holes, cutouts, or electronic parts on it.

Time Chart

Timer period: T = 0.1 to 1 sec. approx.

MOUNTING / SIZE

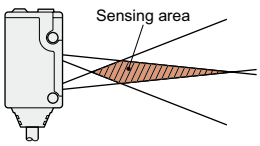

Compact size (W10 × H30 × D18 mm W0.394 × H1.181 × D0.709 in)

It can be installed in a limited space.

VARIETIES

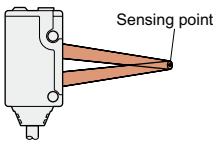

Various applications

Diffused beam type

Even in a limited sensing area, the sensor is not affected by small perforations or unevenness. It is suitable for presence detection.

Spot-beam type

- Visible red spot beam allows easy targetting.
- It is suitable for positioning because of its 0.05 mm 0.002 in repeatability.

NOTE: Mounting bracket is not supplied with the sensor. Please select from the range of optional sensor mounting brackets (two types).

Note: The sensor does not detect even a specular background if it is separated by the distance specified below.
EX-42...150 mm 5.906 in or more, **EX-44**...300 mm 11.811 in or more, **EX-43** and **EX-43T**...100 mm 3.937 in or more
(These are typical values. However, the specular background should be a plane surface, directly facing the sensor. A spherical or curved background may be detected.)

5 m 16.404 ft cable length type

5 m 16.404 ft cable length type (standard: 2 m 6.562 ft) is also available.
When ordering this type, suffix "**-C5**" to the model No.
(e.g.) 5 m 16.404 ft cable length type of **EX-42** is "**EX-42-C5**".

SENSING CHARACTERISTICS (TYPICAL)

EX-42

Sensing field

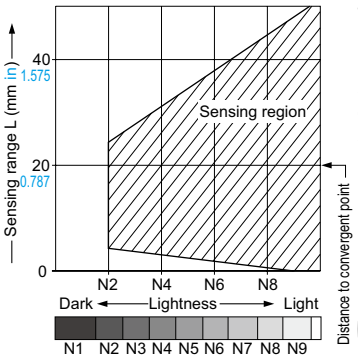

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (white non-glossy paper 50 × 50 mm 1.969 × 1.969 in), the sensing range shortens, as shown in the left graph.

For plotting the left graph, a sensor having a sensitivity such that it can just detect a 50 × 50 mm 1.969 × 1.969 in white non-glossy paper at a distance of 38 mm 1.496 in has been used.

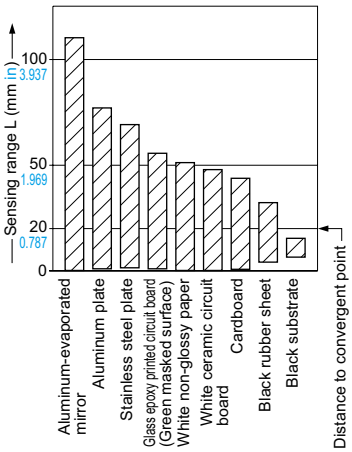

Correlation between lightness and sensing range

The sensing region (typical) is represented by oblique lines in the left figure. However, the sensitivity should be set with enough margin because of slight variation in products.

Lightness shown on the left may differ slightly from the actual object condition.

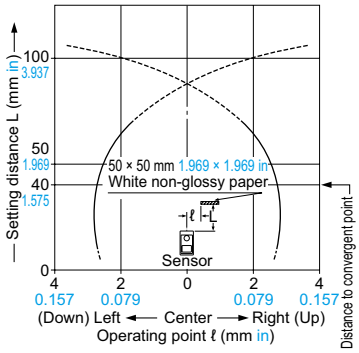

Correlation between material (50 × 50 mm 1.969 × 1.969 in) and sensing range

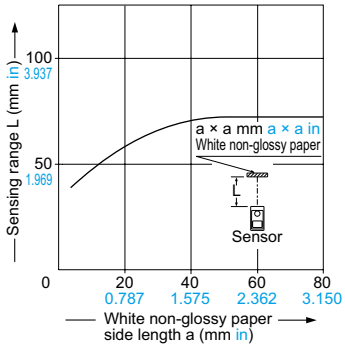

The bars in the graph indicate the sensing range (typical) for the respective material. However, there is a slight variation in the sensing range depending on the product. Further, if there is a reflective object (conveyor, etc.) in the background of the sensing object, since it affects the sensing, separate it by more than twice the sensing range shown in the left graph.

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (white non-glossy paper 50 × 50 mm 1.969 × 1.969 in), the sensing range shortens, as shown in the left graph.

For plotting the left graph, the sensitivity has been set such that a 50 × 50 mm 1.969 × 1.969 in white non-glossy paper is just detectable at a distance of 70 mm 2.756 in.

Correlation between lightness and sensing range

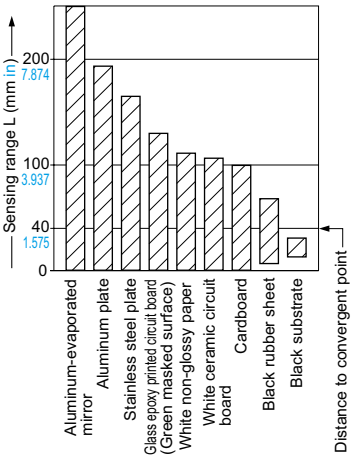

The sensing region (typical) is represented by oblique lines in the left figure. However, the sensitivity should be set with enough margin because of slight variation in products.

The graph is drawn for the maximum sensitivity setting.

PRECAUTIONS FOR PROPER USE

Refer to p.1552~ for general precautions.

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Mounting

- With the optional sensor mounting bracket, the tightening torque should be 0.5 N·m or less.

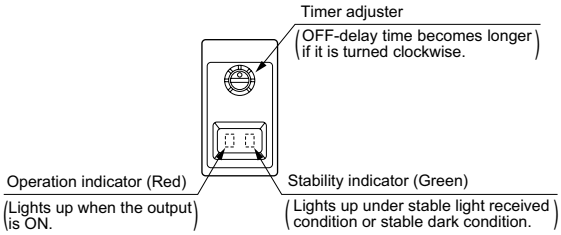

Others

- Do not use during the initial transient time (50 ms) after the power supply is switched on.

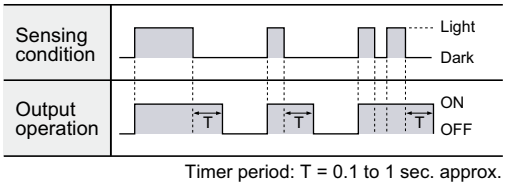

Timer function (Only for EX-43T)

- The variable OFF-delay timer prolongs the output for a certain period (0.1 to 1 sec. approx.).
  It is useful when the connected device has a slow response time or when small objects are sensed and the signal width is small.
  (The timer is always effective.)
