## High Speed CAN, CAN FD Transceiver

The NCV7351 CAN transceiver is the interface between a controller area network (CAN) protocol controller and the physical bus and may be used in both 12 V and 24 V systems. The transceiver provides differential transmit capability to the bus and differential receive capability to the CAN controller.

The NCV7351 is an addition to the CAN high-speed transceiver family complementing NCV734x CAN stand-alone transceivers and previous generations such as AMIS42665, AMIS3066x, etc. The NCV7351F is an addition to the family based on NCV7351 transceiver with improved bit timing symmetry behavior to cope with CAN flexible data rate requirements (CAN FD).

Due to the wide common-mode voltage range of the receiver inputs and other design features, the NCV7351 is able to reach outstanding levels of electromagnetic susceptibility (EMS). Similarly, extremely low electromagnetic emission (EME) is achieved by the excellent matching of the output signals.

### Key Features

- Compatible with the ISO 11898-2 Standard
- High Speed (up to 1 Mbps)
- NCV7351F Version Has Specification for Loop Delay Symmetry (up to 2 Mbps according to ISO11898-2, up to 5 Mbps for information only)
- V<sub>IO</sub> Pin on NCV7351(F)D13 Version Allowing Direct Interfacing with 3 V to 5 V Microcontrollers
- EN Pin on NCV7351D1E Version Allowing Switching the Transceiver to a Very Low Current OFF Mode
- Excellent Electromagnetic Susceptibility (EMS) Level Over Full Frequency Range. Very Low Electromagnetic Emissions (EME) Low EME also Without Common Mode (CM) Choke
- Bus Pins Protected Against >15 kV System ESD Pulses
- Transmit Data (TxD) Dominant Time-out Function
- Under all Supply Conditions the Chip Behaves Predictably. No Disturbance of the Bus Lines with an Unpowered Node
- Bus Pins Short Circuit Proof to Supply Voltage and Ground
- Bus Pins Protected Against Transients in an Automotive Environment
- Thermal Protection
- These are Pb-Free Devices

### Quality

- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable

### Typical Applications

- Automotive
- Industrial Networks

# NCV7351, NCV7351F

## APPLICATION INFORMATION

## FUNCTIONAL DESCRIPTION

**NCV7351** has three versions which differ from each other only by function of pin 5. (See also Table 2) Devices marked with F (NCV7351F) are devices compliant to CAN flexible data rate timing specifications as detailed in electrical characteristics section. Except fulfilling these extra CAN FD requirements, all remaining specifications are equal to other devices from NCV7351 family. E.g. all specifications valid for NCV7351-3 versions are also valid for NCV7351F-3 version.

**NCV7351-3:** Pin 5 is  $V_{IO}$  pin, which is supply pin for transceiver digital inputs/output (supplying pins TxD, RxD, S, EN). The  $V_{IO}$  pin should be connected to microcontroller supply pin. By using  $V_{IO}$  supply pin shared with microcontroller the I/O levels between microcontroller and

transceiver are properly adjusted. This allows in applications with microcontroller supply down to 3 V to easily communicate with the transceiver. (See Figure 2)

**NCV7351-0:** Pin 5 is not connected. This version is full replacement of the previous generation CAN transceiver AMIS30660.

**NCV7351-E:** Pin 5 is digital enable pin which allows transceiver to be switched off with very low supply current.

### OPERATING MODES

The NCV7351 modes of operation are provided as illustrated in Table 3. These modes are selectable through pin S and also EN in case of NCV7351-E.

**Table 3. OPERATING MODES**

| Mode                | Pin S | Pin EN (Note 1) | Pin TxD | CANH,L Pins       | RxD      |
|---------------------|-------|-----------------|---------|-------------------|----------|
| <b>Normal</b>       | 0     | 1               | 0       | Dominant          | 0        |
|                     | 0     | 1               | 1       | Recessive         | 1        |
| <b>Silent</b>       | 1     | 1               | X       | Recessive         | 1        |
|                     | 1     | 1               | X       | Dominant (Note 3) | 0        |
| <b>Off (Note 1)</b> | X     | 0               | X       | floating          | floating |

1. Only applicable to NCV7351-E

2. 'X' = don't care

3. CAN bus driven to dominant by another transceiver on the bus

### Normal Mode

In the normal mode, the transceiver is able to communicate via the bus lines. The signals are transmitted and received to the CAN controller via the pins TxD and RxD. The slopes on the bus lines outputs are optimized to give low EME.

### Silent Mode

In the silent mode, the transmitter is disabled. The bus pins are in recessive state independent of TxD input. Transceiver listens to the bus and provides data to controller, but controller is prevented from sending any data to the bus.

### Off Mode

In Off mode, complete transceiver is disabled and consumes very low current. The CAN pins are floating not loading the CAN bus.

### Over-temperature Detection

A thermal protection circuit protects the IC from damage by switching off the transmitter if the junction temperature exceeds a value of approximately 180°C. Because the transmitter dissipates most of the power, the power dissipation and temperature of the IC is reduced. All other IC functions continue to operate. The transmitter off-state resets when the temperature decreases below the shutdown threshold and pin TxD goes high. The thermal protection

circuit is particularly needed in case of the bus line short circuits.

### TxD Dominant Time-out Function

A TxD dominant time-out timer circuit prevents the bus lines being driven to a permanent dominant state (blocking all network communication) if pin TxD is forced permanently low by a hardware and/or software application failure. The timer is triggered by a negative edge on pin TxD. If the duration of the low-level on pin TxD exceeds the internal timer value  $t_{dom}$ , the transmitter is disabled, driving the bus into a recessive state. The timer is reset by a positive edge on pin TxD. This TxD dominant time-out time ( $t_{dom}(TxD)$ ) defines the minimum possible bit rate to 12 kbps.

### Fail Safe Features

A current-limiting circuit protects the transmitter output stage from damage caused by accidental short circuit to either positive or negative supply voltage, although power dissipation increases during this fault condition.

The pins CANH and CANL are protected from automotive electrical transients (according to ISO 7637; Figure 4). Internally, pin TxD is pulled high, pin EN and S low should the input become disconnected. Pins TxD, S, EN and RxD will be floating, preventing reverse supply should the  $V_{CC}$  supply be removed.

## NCV7351, NCV7351F

**Definitions:** All voltages are referenced to GND (pin 2). Positive currents flow into the IC. Sinking current means the current is flowing into the pin; sourcing current means the current is flowing out of the pin.

**Table 4. ABSOLUTE MAXIMUM RATINGS**

| Symbol       | Parameter                                                                     | Conditions                          | Min  | Max  | Unit |
|--------------|-------------------------------------------------------------------------------|-------------------------------------|------|------|------|
| $V_{sup}$    | Supply voltage $V_{CC}$                                                       |                                     | -0.3 | +6   | V    |
| $V_{CANH}$   | DC voltage at pin CANH                                                        | $0 < V_{CC} < 5.5$ V; no time limit | -50  | +50  | V    |
| $V_{CANL}$   | DC voltage at pin CANL                                                        | $0 < V_{CC} < 5.5$ V; no time limit | -50  | +50  | V    |
| $V_{IOs}$    | DC voltage at pin TxD, RxD, S, EN, $V_{IO}$                                   | Notes 4 and 5                       | -0.3 | +6   | V    |
| $V_{esd}$    | Electrostatic discharge voltage at all pins according to EIA-JESD22           | Note 6                              | -6   | +6   | kV   |
|              | Electrostatic discharge voltage at CANH,CANL, pins according to EIA-JESD22    | Note 6                              | -8   | +8   | kV   |
|              | Electrostatic discharge voltage at CANH, CANL pins According to IEC 61000-4-2 | Note 7                              | -15  | +15  | kV   |
|              | Standardized charged device model ESD pulses according to ESD-STM5.3.1-1999   |                                     | -750 | +750 | V    |
| $V_{schaff}$ | Transient voltage at CANH, CANL pins, See Figure 4                            | Note 8                              | -150 | +100 | V    |
| Latch-up     | Static latch-up at all pins                                                   | Note 9                              |      | +150 | mA   |
| $T_{stg}$    | Storage temperature                                                           |                                     | -55  | +150 | °C   |
| $T_J$        | Maximum junction temperature                                                  |                                     | -40  | +170 | °C   |

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

4. EN pin Only available on NCV7351-E version

5.  $V_{IO}$  pin Only available on NCV7351-3 version

6. Standardized human body model electrostatic discharge (ESD) pulses in accordance to EIA-JESD22. Equivalent to discharging a 100 pF capacitor through a 1.5 k $\Omega$  resistor.

7. System human body model electrostatic discharge (ESD) pulses. Equivalent to discharging a 150 pF capacitor through a 330  $\Omega$  resistor referenced to GND. Verified by external test house

8. Pulses 1, 2a,3a and 3b according to ISO 7637 part 3. Results were verified by external test house.

9. Static latch-up immunity: Static latch-up protection level when tested according to EIA/JESD78.

**Table 5. THERMAL CHARACTERISTICS**

| Symbol             | Parameter                                              | Conditions | Value | Unit |
|--------------------|--------------------------------------------------------|------------|-------|------|
| $R_{\theta JA\_1}$ | Thermal Resistance Junction-to-Air, 1S0P PCB (Note 10) | Free air   | 125   | K/W  |
| $R_{\theta JA\_2}$ | Thermal Resistance Junction-to-Air, 2S2P PCB (Note 11) | Free air   | 75    | K/W  |

10. Test board according to EIA/JEDEC Standard JESD51-3, signal layer with 10% trace coverage.

11. Test board according to EIA/JEDEC Standard JESD51-7, signal layers with 10% trace coverage.

# NCV7351, NCV7351F

## ELECTRICAL CHARACTERISTICS

$V_{CC} = 4.5 \text{ V to } 5.5 \text{ V}$ ;  $V_{IO} = 2.8 \text{ V to } 5.5 \text{ V}$ ;  $T_J = -40^\circ\text{C to } +150^\circ\text{C}$ ;  $R_{LT} = 60 \Omega$  unless specified otherwise.  
On chip versions without  $V_{IO}$  pin reference voltage for all digital inputs and outputs is  $V_{CC}$  instead of  $V_{IO}$ .

**Table 6. CHARACTERISTICS**

| Symbol                                                                  | Parameter                                                          | Conditions                                                         | Min                 | Typ        | Max                  | Unit          |

## PACKAGE DIMENSIONS

### SOIC-8 CASE 751AZ ISSUE B

#### NOTES:

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
2. CONTROLLING DIMENSION: MILLIMETERS.
3. DIMENSION b DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE PROTRUSION SHALL BE 0.004 mm IN EXCESS OF MAXIMUM MATERIAL CONDITION.
4. DIMENSION D DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS. MOLD FLASH, PROTRUSIONS OR GATE BURRS SHALL NOT EXCEED 0.006 mm PER SIDE. DIMENSION E1 DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSION. INTERLEAD FLASH OR PROTRUSION SHALL NOT EXCEED 0.010 mm PER SIDE.
5. THE PACKAGE TOP MAY BE SMALLER THAN THE PACKAGE BOTTOM. DIMENSIONS D AND E1 ARE DETERMINED AT THE OUTERMOST EXTREMES OF THE PLASTIC BODY AT DATUM H.
6. DIMENSIONS A AND B ARE TO BE DETERMINED AT DATUM H.
7. DIMENSIONS b AND c APPLY TO THE FLAT SECTION OF THE LEAD BETWEEN 0.10 TO 0.25 FROM THE LEAD TIP.
8. A1 IS DEFINED AS THE VERTICAL DISTANCE FROM THE SEATING PLANE TO THE LOWEST POINT ON THE PACKAGE BODY.

| MILLIMETERS |          |      |
|-------------|----------|------|
| DIM         | MIN      | MAX  |
| A           | ---      | 1.75 |
| A1          | 0.10     | 0.25 |
| A2          | 1.25     | ---  |
| b           | 0.31     | 0.51 |
| c           | 0.10     | 0.25 |
| D           | 4.90 BSC |      |
| E           | 6.00 BSC |      |
| E1          | 3.90 BSC |      |
| e           | 1.27 BSC |      |
| h           | 0.25     | 0.41 |
| L           | 0.40     | 1.27 |
| L2          | 0.25 BSC |      |

#### RECOMMENDED SOLDERING FOOTPRINT\*

\*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.

ON Semiconductor and are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at [www.onsemi.com/site/pdf/Patent-Marketing.pdf](http://www.onsemi.com/site/pdf/Patent-Marketing.pdf). ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
