1 Overview

NuTiny-SDK-NUC122-64P is the specific development tool for NuMicro™ NUC122 series. Users can use NuTiny-SDK-NUC122-64P to develop and verify the application program easily.

NuTiny-SDK-NUC122-64P includes two portions. One is NuTiny-EVB-122 and the other is Nu-Link-Me. NuTiny-EVB-122 is the evaluation board and Nu-Link-Me is its Debug Adaptor. Thus, users do not need other additional ICE or debug equipments.

2 NuTiny-SDK-NUC122-64P Introduction

NuTiny-SDK-NUC122-64P uses the NUC122RD2AN as the target microcontroller. Figure 2-1 is NuTiny-SDK-NUC122-64P for NUC122 series, the left portion is called NuTiny-EVB-122 and the right portion is Debug Adaptor called Nu-Link-Me.

NuTiny-EVB-122 is similar to other development boards. Users can use it to develop and verify applications to emulate the real behavior. The on board chip covers NUC122 series features. The NuTiny-EVB-122 can be a real system controller to design users' target systems.

Nu-Link-Me is a Debug Adaptor. The Nu-Link-Me Debug Adaptor connects your PC's USB port to your target system (via Serial Wired Debug Port) and allows you to program and debug embedded programs on the target hardware. To use Nu-Link-Me Debug adaptor with IAR or Keil, please refer to "Nuvoton NuMicro™ IAR ICE driver user manual" or "Nuvoton NuMicro™ Keil ICE driver user manual" for detail. These two documents will be stored in the local hard disk when the user installs each driver.
