DESCRIPTION

The PL586-25/-28 is a non-multiplier VCXO IC specifically designed to pull fundamental mode crystals from 120MHz to 125MHz. This IC achieves a typical pull range of ± 110 ppm with <5% linearity. The phase noise performance is optimized for close-in performance and with 110fs phase jitter, makes this an ideal solution for all high end clocking applications such as SONET, WiMax, CPRI, OBSAI, Fiber Channel, and any application where performance and quality are required.
