

Low Capacitance Modular RJ Jacks

LCT Series

UL Recognized
CSA Certified

LCT Series

Capacitance components enhance the filtering performance but may alter the signal as it passes through the RJ Jack. A low capacitance model allows additional filter performance without significant effect on the signal itself. The new LCT models provide improved performance over L models without impact on the signal. These parts are particularly suited for ethernet applications.

These models are available in shielded models only, with either panel or board ground.
