

# SNx407 and SNx417 Hex Buffers and Drivers With Open-Collector High-Voltage Outputs

## 1 Features

- Convert TTL Voltage Levels to MOS Levels
- High Sink-Current Capability Design
- Open-Collector Driver for Indicator Lamps
- Inputs Fully Compatible With Most TTL Circuits
- On Products Compliant to MIL-PRF-38535, All Parameters Are Tested Unless Otherwise Noted. On All Other Products, Production Processing Does Not Necessarily Include Testing of All Parameters.

## 2 Applications

- Audio Docks: Portable
- Blu-ray Disc® Players and Home Theaters
- MP3 Players or Recorders
- Personal Digital Assistants (PDAs)
- Power: Telecom and Server AC or DC Supply: Single Controllers: Analog and Digital
- Solid-State Drive (SSD): Client and Enterprise
- TV: LCD, Digital, and High-Definition (HDTV)
- Tablets: Enterprise
- Video Analytics: Servers
- Wireless Headsets, Keyboards, and Mice

## 3 Description

These TTL hex buffers and drivers feature high-voltage open-collector outputs for interfacing with high-level circuits (such as MOS) or for driving high-current loads (such as lamps or relays), and also are characterized for use as buffers for driving TTL inputs. The SN5407 and SN7407 devices have minimum breakdown voltages of 30 V, and the SN5417 and SN7417 devices have minimum breakdown voltages of 15 V. The maximum sink current is 30 mA for the SN5407 and SN5417 devices and 40 mA for the SN7407 and SN7417 devices.

These devices perform the Boolean function  $Y = A$  in positive logic.

These circuits are completely compatible with most TTL families. Inputs are diode clamped to minimize transmission-line effects, which simplifies design. Typical power dissipation is 145 mW, and average propagation delay time is 14 ns.

### Device Information<sup>(1)</sup>

| PART NUMBER      | PACKAGE   | BODY SIZE (NOM)    |
|------------------|-----------|--------------------|
| SNx407J, SNx417J | CDIP (14) | 19.56 mm × 6.92 mm |
| SN74x7D          | SOIC (14) | 8.65 mm × 3.91 mm  |
| SN74x7N          | PDIP (14) | 19.30 mm × 6.35 mm |
| SNJ5407FK        | LCCC (20) | 8.89 mm × 8.89 mm  |
| SNJ5407W         | CFP (14)  | 9.21 mm × 5.97 mm  |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                  |                                  | MIN            | MAX | UNIT |
|------------------|----------------------------------|----------------|-----|------|
| V <sub>CC</sub>  | Supply voltage                   |                | 7   | V    |
| V <sub>I</sub>   | Input voltage <sup>(2)</sup>     |                | 5.5 | V    |
| V <sub>O</sub>   | Output voltage <sup>(2)(3)</sup> | SN5407, SN7407 | 30  | V    |
|                  |                                  | SN5417, SN7417 | 15  |      |
| T <sub>J</sub>   | Junction temperature             |                | 150 | °C   |
| T <sub>stg</sub> | Storage temperature              | –65            | 150 | °C   |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to GND.
- (3) This is the maximum voltage that can safely be applied to any output when it is in the OFF state.

### 6.2 ESD Ratings

|                    |                         |                                                                                | VALUE | UNIT |
|--------------------|-------------------------|--------------------------------------------------------------------------------|-------|------|
| SN7407 AND SN7417  |                         |                                                                                |       |      |
| V <sub>(ESD)</sub> | Electrostatic discharge | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>              | ±2000 | V    |
|                    |                         | Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup> | ±1000 |      |
| SN5407 AND SN5417  |                         |                                                                                |       |      |
| V <sub>(ESD)</sub> | Electrostatic discharge | Human-body model (HBM)                                                         | ±2000 | V    |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                 |                                |                | MIN  | NOM | MAX  | UNIT |
|-----------------|--------------------------------|----------------|------|-----|------|------|
| V <sub>CC</sub> | Supply voltage                 | SN5407, SN5417 | 4.5  | 5   | 5.5  | V    |
|                 |                                | SN7407, SN7417 | 4.75 | 5   | 5.25 |      |
| V <sub>IH</sub> | High-level input voltage       |                | 2    |     |      | V    |
| V <sub>IL</sub> | Low-level input voltage        |                | 0.8  |     |      | V    |
| V <sub>OH</sub> | High-level output voltage      | SN5407, SN7407 | 30   |     |      | V    |
|                 |                                | SN5417, SN7417 | 15   |     |      |      |
| I <sub>OL</sub> | Low-level output current       | SN5407, SN5417 | 30   |     |      | mA   |
|                 |                                | SN7407, SN7417 | 40   |     |      |      |
| T <sub>A</sub>  | Operating free-air temperature | SN5407, SN5417 | −55  | 125 |      | °C   |
|                 |                                | SN7407, SN7417 | 0    | 70  |      |      |

- (1) All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. See [Implications of Slow or Floating CMOS Inputs](#).

## 6.4 Thermal Information

## 6.7 Typical Characteristics

**Figure 1. Time Low to High vs  $V_{OUT}$**

## 7 Parameter Measurement Information

- A.  $C_L$  includes probe and jig capacitance.
- B. In the examples above, the phase relationships between inputs and outputs have been chosen arbitrarily.
- C. All input pulses are supplied by generators having the following characteristics:  $PRR \leq 1 \text{ MHz}$ ,  $Z_O = 50 \Omega$ ,  $t_r \leq 7 \text{ ns}$ ,  $t_f \leq 7 \text{ ns}$ .
- D. The outputs are measured one at a time, with one input transition per measurement.

## 8 Detailed Description

### 8.1 Overview

The SN74x7 is a high sink current capable open-collector buffer. This device is high-voltage tolerant on the output of up to 30 V on the SNx407 model and 15 V on the SNx417 model. The SN74x7 is also useful for converting TTL voltage levels to MOS levels.

### 8.2 Functional Block Diagram

Copyright © 2016, Texas Instruments Incorporated

Resistor values shown are nominal.

**Figure 3. Schematic**

### 8.3 Feature Description

The SNx407 and SNx417 devices are ideal for high voltage outputs. The SNx407 device has a maximum output voltage 30 V and the SNx417 device has a maximum output voltage 15 V.

The high sink current is up to 40 mA for the SN74x7.

### 8.4 Device Functional Modes

Table 1 lists the functions of the devices.

**Table 1. Function Table**

| INPUT<br>A | OUTPUT<br>Y |
|------------|-------------|
| H          | High-Z      |
| L          | L           |

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The SN74x7 device is a high-drive, open-collector device that is used for multiple buffer-type functions. The device produces 30 mA of drive current. Therefore, this device is ideal for driving multiple inputs and for high-speed applications up to 100 MHz. The outputs are high voltage tolerant up to 30 V for the SNx407.

### 9.2 Typical Application

Copyright © 2016 Texas Instruments Incorporated

Figure 4. Typical Application Diagram

#### 9.2.1 Design Requirements

Avoid bus contention because it can drive currents that would exceed maximum limits. The high drive also creates fast edges into light loads; therefore, routing and load conditions must be considered to prevent ringing.

#### 9.2.2 Detailed Design Procedure

1. Recommended Input Conditions
  - Rise time and fall time specs: See  $t_{PHL}$  and  $t_{PLH}$  in [Switching Characteristics](#).
  - Specified high and low levels: See  $V_{IH}$  and  $V_{IL}$  in [Recommended Operating Conditions](#).
2. Recommend Output Conditions
  - Load currents must not exceed 30 mA.
  - Outputs must not be pulled above 30 V for the SNx407 device.

## Typical Application (continued)

### 9.2.3 Application Curve

**Figure 5.**  $V_{OL}$  vs  $I_{OL}$

## 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating (see [Recommended Operating Conditions](#)).

Each  $V_{CC}$  pin must have a good bypass capacitor to prevent power disturbance. TI recommends 0.1  $\mu\text{F}$  for devices with a single supply. If there are multiple  $V_{CC}$  pins, then TI recommends 0.01  $\mu\text{F}$  or 0.022  $\mu\text{F}$  for each power pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. A 0.1  $\mu\text{F}$  and a 1  $\mu\text{F}$  are commonly used in parallel. The bypass capacitor must be installed as close to the power pin as possible for best results.

## 11 Layout

### 11.1 Layout Guidelines

When using multiple bit logic devices inputs must never float.

In many cases, functions or parts of functions of digital logic devices are unused, for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such input pins must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. [Figure 6](#) specifies the rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally they are tied to GND or  $V_{CC}$ , whichever makes more sense or is more convenient. It is generally acceptable to float outputs, unless the part is a transceiver.

### 11.2 Layout Example

**Figure 6.** Layout Diagram

## 12 Device and Documentation Support

### 12.1 Documentation Support

#### 12.1.1 Related Documentation

For related documentation see the following:

[Implications of Slow or Floating CMOS Inputs](#), (SCBA004)

### 12.2 Related Links

The table below lists quick access links. Categories include technical documents, support and community resources, tools and software, and quick access to sample or buy.

**Table 2. Related Links**

### 12.3 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 12.4 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

### 12.5 Trademarks

E2E is a trademark of Texas Instruments.

Blu-ray Disc is a registered trademark of Blue-ray Disc Association.

All other trademarks are the property of their respective owners.

### 12.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 12.7 Glossary

**SLYZ022** — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## **13 Mechanical, Packaging, and Orderable Information**

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser based versions of this data sheet, refer to the left hand navigation.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBsolete:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF SN5407, SN5417, SN7407, SN7417 :**

CERAMIC DUAL FLATPACK

## NOTES:

- All linear dimensions are in inches (millimeters).
- This drawing is subject to change without notice.
- This package can be hermetically sealed with a ceramic lid using glass frit.
- Index point is provided on cap for terminal identification only.
- Falls within MIL STD 1835 GDFP1-F14

## PACKAGE OUTLINE

**CDIP - 5.08 mm max height**

CERAMIC DUAL IN LINE PACKAGE

4214771/A 05/2017

### NOTES:

1. All controlling linear dimensions are in inches. Dimensions in brackets are in millimeters. Any dimension in brackets or parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This package is hermetically sealed with a ceramic lid using glass frit.
4. Index point is provided on cap for terminal identification only and on press ceramic glass frit seal only.
5. Falls within MIL-STD-1835 and GDIP1-T14.

D (R-PDSO-G14)

PLASTIC SMALL OUTLINE

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
- D. Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
- E. Reference JEDEC MS-012 variation AB.

D (R-PDSO-G14)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate designs.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

4040049/E 12/2002

NOTES:

- A. All linear dimensions are in inches (millimeters).  
B. This drawing is subject to change without notice.
-  Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).  
 The 20 pin end lead shoulder width is a vendor option, either half or full width.
