Description

T0501SA are ultra low capacitance ESD protection devices designed to protect high speed data interfaces. They are designed to replace 0201 size mul- tilayer varistors (MLVs) in portable applications such as cell phones, notebook computers, and other portable electronics. This device offers desirable characteristics for board level protection including fast response time, low operating and clamping voltage, and no device degradation. T0501SA has a typical capacitance of only 0.25pF . This allows it to be used on circuits operating.

T0501SA is in a 2-pin DFN0603 package. It measures $0.6 \times 0.3\text{ mm}$ with a nominal height of only 0.25mm . Leads are finished with lead-free NiAu. Each device will protect one line operating at 5V . It gives the designer the flexibility to protect single lines in applications where arrays are not practical. The combination of small size and high ESD surge capability makes them ideal for use in portable applications such as cellular phones, digital cameras, and Mp3 players.

Assembly Guidelines

The small size of this device means that some care must be taken during the mounting process to insure reliable solder joint. The table below provides CITC recommended assembly guidelines for Mounting this device. The figure at the right details CITC recommended aperture based on the below recommendations. Note that these are only recommendations and should serve only as a starting point for design since there are many factors that affect the assembly process. The exact manufacturing parameters will require some experimentation to get the desired solder application.

Assembly Parameter	Recommendation
Solder Stencil Design	Laser cut, Electro-polished
Aperture shape	Rectangular with rounded corners
Solder Stencil Thickness	0.100 mm (0.004")
Solder Paste Type	Type 4 size sphere or smaller
Solder Reflow Profile	Per JEDEC J-STD-020
PCB Solder Pad Design	Non-Solder mask defined
PCB Pad Finish	OSP OR NiAu
