High Power Thin Film Current Sensor

Size:0201,0402,0603,0805,1206,2010,2512

*Contents in this sheet are subject to change without prior notice.

FEATURES

1. Extra high power rating and low TCR.
2. Extra low resistance and high precision.
3. High component and equipment reliability
4. Low resistances applied to current sensing
5. RoHS compliant & Halogen Free.
6. Suitable for lead free soldering.

APPLICATIONS

- Current sensor
- Medical equipment
- Measuring instrument
- Communication device
- Power supply
- Computer

DESCRIPTION

This specification describes TTL series current sensor – Extra high power and low TCR with lead-free terminations made by metal film with substrate.

Note :

1. This is the maximum voltage that may be continuously supplied to the resistor element, see "IEC publication 60115-8"
2. Max. Operation Voltage : So called RCWV (Rated Continuous Working Voltage) is determined by

$$RCWV = \sqrt{\text{Rated Power} \times \text{Resistance Value}}$$
3. Operating Temperature Range
 0201/0402 : -55°C to +125°C
 0603/0805/1206/2010/2512 : -55°C to +170°C

FUNCTIONAL DESCRIPTION

Product characterization

Standard values of nominal resistance are taken from the E96 & E24 series for resistors with a tolerance of $\pm 5.0\%$, $\pm 1.0\%$. The values of the E24/E96 series are in accordance with "IEC publication 60063".

DERATING

The power that the resistor can dissipate depends on the operating temperature; see Fig.1&Fig2

0201/0402 Range: -55°C to +125°C (Fig.1)

Fig.1 Maximum dissipation in percentage of rated power
As a function of the ambient temperature

0603 to 2512 Range: -55°C to +170°C (Fig.2)

Fig.2 Maximum dissipation in percentage of rated power

MOUNTING

Due to their rectangular shapes and small tolerances, Surface Mountable Resistors are suitable for handling by automatic placement systems.

Chip placement can be on ceramic substrates and printed-circuit boards (PCBs).

Electrical connection to the circuit is by individual soldering condition.

The end terminations guarantee a reliable contact.

SOLDERING CONDITION

The robust construction of chip resistors allows them to be completely immersed in a solder bath of 260°C for 10 seconds. Therefore, it is possible to mount Surface Mount Resistors on one side of a PCB and other discrete components on the reverse (mixed PCBs).

Surface Mount Resistors are tested for solderability at 235°C during 2 seconds within lead-free solder bath. The test condition for no leaching is 260°C for 30 seconds. Typical examples of soldering profile and condition that provide reliable joints without any damage are given in Fig 3. and Table 1.

Fig. 3 Infrared soldering profile for Chip Resistors

Table 1. Infrared soldering condition for Chip Resistors

Temperature Condition	Exposure Time
Average ramp-up rate (217°C to 260°C)	Less than 3°C/second
Between 150 and 200°C	Between 60-120 seconds
> 217°C	Between 60-150 seconds
Peak Temperature	260°C +0/-5°C
Time within 245°C	Min. 30 seconds
Ramp-down rate (Peak to 217°C)	Less than 6°C/second
Time from 25°C to Peak	No greater than 480 seconds
