

UM601A

LINEAR INTEGRATED CIRCUIT

VOLTAGE AND CURRENT CONTROLLER

DESCRIPTION

The UTC **UM601A** integrated circuit incorporates a high stability series band gap voltage reference, two ORed operational amplifiers and a current source.

This IC compares the DC voltage and the current level at the output of a switching power supply to an internal reference. It provides a feedback through an optocoupler to the PWM controller IC in the primary side.

The controlled current generator can be used to modify the level of current limitation by offsetting the information coming from the current sensing resistor.

It can be used in voltage supervisors, every types of application requiring a precision voltage regulation and current limitation, over voltage protection, battery charger with a constant voltage and a limited output current.

FEATURES

- * 1.24V Series Voltage Reference with 10mA Output Current and 1% Precision (**UM601A**)
- * Two Operational Amplifiers with ORed Output and 1MHz Gain Bandwidth Product
- * Built-In Current Generator with Enable / Disable Function
- * 4.5 ~ 32V Supply Voltage Range

■ PIN CONFIGURATION

■ PIN DESCRIPTION

PIN	NAME	TYPE	FUNCTION
1.	V _{REF}	OUTPUT	Voltage Reference Output 1.24V, 10mA max. Do not short circuit
2.	C _{SEN}	INPUT	Current source enable input. This current source can be used to offset the voltage measurement on the sense resistor and therefore to modify the charge current. The current source is enabled when the input voltage on pin 2 is lower than 0.8V
3.	C _{RREF}	INPUT	Current Limitation Reference Input
4.	GND	INPUT	Ground
5.	C _{RIN}	INPUT	Current Limitation Loop Input, connected to the sense resistor
6.	OUTPUT	OUTPUT	Output pin common to the voltage regulation and current limitation loops. This output can drive the primary side (LED) of an optocoupler
7.	V _{RIN}	INPUT	Voltage Regulation Loop Input
8.	V _{CC}	INPUT	Power Supply Input (4.5 ~ 32VDC)
