

## Antenna Filter

### ■ Features

This compact crystal filter for small antennas has been developed to remove interference caused by nonlinearity of a receiver and has low insertion loss across a wide frequency range.

- It can be manufactured for a wide frequency range from 40 to 280 MHz.
- Compact and light.
- Low insertion loss.
- Excellent temperature characteristics.

**RoHS Compliant**  
Directive 2002/95/EC
