

OPTIREG™ Linear TLE4264-2

5-V low drop fixed voltage regulator

Features

- Output voltage tolerance $\leq \pm 3\%$ ($\pm 2\%$ up to 50 mA)
- 150 mA current capability
- Low-drop voltage
- Very low current consumption: 40 μA
- Overtemperature protection
- Short-circuit proof
- Suitable for use in automotive electronics
- Reverse polarity proof
- Green Product (RoHS compliant)

Potential applications

General automotive applications.

Product validation

Qualified for automotive applications. Product validation according to AEC-Q100/101.

Description

The OPTIREG™ Linear TLE4264-2 is a monolithic integrated low-drop fixed voltage regulator which can supply loads up to 150 mA. It is functional compatible to the TLE4264, but has a reduced quiescent current of typ. 40 μA . The TLE4264-2 is especially designed for all applications which require very low quiescent currents. The device is available in the small surface mounted PG-SOT223-4 package. The device is pin compatible to the TLE4264. The regulator is designed to supply microprocessor systems under the severe condition of automotive applications and is therefore equipped with additional protection against overload, short-circuit and overtemperature. Of course the TLE4264-2 can be used in all other applications, wherever a stabilized voltage is required.

An input voltage V_I in the range of $5.5\text{ V} < V_I < 45\text{ V}$ is regulated to $V_{Q, \text{nom}} = 5\text{ V}$ with an accuracy of $\pm 3\%$. An accuracy of $\pm 2\%$ is kept for a load current range up to 50 mA.

The device operates in the temperature range of $T_j = -40^\circ\text{C}$ to 150°C .

	I_q	–	40	70	μA	$I_Q = 100\ \mu\text{A}$
Current consumption $I_q = I_1 - I_Q$	I_q	–	1.7	4	mA	$I_Q = 50\text{ mA}$
Drop voltage	V_{dr}	–	0.22	0.5	V	$I_Q = 100\text{ mA}$ ¹⁾
Load regulation	$\Delta V_{Q,lo}$	–	50	90	mV	$I_Q = 1\text{ mA}$ to 100 mA $V_1 = 13.5\text{ V}$
Line regulation	$\Delta V_{Q,li}$	–	5	30	mV	$V_1 = 6\text{ V}$ to 28 V $I_Q = 1\text{ mA}$
Power supply ripple rejection	$PSRR$	–	68	–	dB	$f_r = 100\text{ Hz}$ $V_r = 0.5\text{ Vpp}$
Output capacitor	C_Q	10	–	–	μF	$ESR \leq 4\ \Omega$ at 10 kHz

1) Drop voltage = $V_1 - V_Q$ (measured where V_Q has dropped 100 mV from the nominal value obtained at $V_1 = 13.5\text{ V}$).

Functional description

4 Functional description

4.1 Application circuit

Figure 3 Application circuit

The control amplifier compares a reference voltage, which is kept highly precise by resistance adjustment, to a voltage that is proportional to the output voltage and drives the base of the series transistor via a buffer. Saturation control, working as a function of load current, prevents any over-saturation of the power element. The IC is additionally protected against overload, overtemperature and reverse polarity.

In the TLE4264-2 the output voltage is divided and compared to an internal reference of 2.5 V typical. The regulation loop controls the output to achieve an output voltage of 5 V with an accuracy of $\pm 3\%$ at an input voltage range of $5.5 \text{ V} < V_I < 45 \text{ V}$.

Figure 3 shows a typical application circuit. For stability of the control loop the TLE4264-2 output requires an output capacitor C_O of at least 10 μF with a maximum permissible ESR of 4 Ω . Tantalum as well as multi layer ceramic capacitors are suitable.

At the input of the regulator an input capacitor is necessary for compensating line influences (100 nF ceramic capacitor recommended). A resistor of approx. 1 Ω in series with C_I , can damp any oscillation occurring due the input inductivity and the input capacitor.

In the application circuit shown in **Figure 3** an additional electrolytic input capacitor of 470 μF is added in order to buffer supply line influences. This capacitor is recommended, if the device is sourced via long supply lines of several meters.

The TLE4264-2 can supply up to 150 mA. However for protection for high input voltage above 25 V, the output current is reduced (SOA protection).

Typical performance characteristics

5 Typical performance characteristics

Output voltage V_Q versus junction temperature T_j

Drop voltage V_{dr} versus output current I_Q

Output voltage V_Q versus input voltage V_I

Typical performance characteristics

Current consumption I_q versus output current I_Q

Current consumption I_q versus output current I_Q

Green Product (RoHS compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e. Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).
