

ML9270-xx

33-Segment VFD Driver

GENERAL DESCRIPTION

The ML9270-xx is a monolithic IC designed for directly driving the anode of the vacuum fluorescent display tube. The device contains a 34-bit shift register circuit, 33-bit latch circuit, PLA (33*33 Matrix) and 33-output circuit on a single chip.

Display data is serially stored in the shift register at the rising edge of a CLOCK pulse.

Setting the BLANK_BAR pin low allows all the driver outputs to be driven low, which makes it possible to set the display blanking.

FEATURES

- Logic power supply (V_{DD}) : 3.3 V $\pm$ 10% or 5.0 V $\pm$ 10%
- VFD tube drive power supply (V_{DISP}) : 8 to 18 V
- VFD driver output can be connected directly to the VFD tube. No pull-down resistor is required.
- VFD driver output current
 - Segment driver (OUTPUT1 to 13) : -6.0 mA (V_{DISP} = 9.5V)
 - Segment driver (OUTPUT14 to 21) : -1.5 mA (V_{DISP} = 9.5V)
 - Segment driver (OUTPUT22 to 33) : -6.0 mA (V_{DISP} = 9.5V)
- Data transfer speed : 5.0MHz
- Package : 44-pin plastic QFP (QFP44-P-910-0.80-2K)
- Built-in power on reset circuit

BLOCK DIAGRAM

PIN CONFIGURATION (TOP VIEW)

PIN DESCRIPTION

Pin	Symbol	Type	Connects to	Description
32 to 38, 40 to 44, 1	OUTPUT 1 to 13	O	VFD tube anode electrode	High voltage driver outputs for driving VFD tube. The driver outputs are in phase with the corresponding latch outputs.
11 to 16, 18 to 23	OUTPUT 22 to 33			The direct connection to the anode of a VFD tube eliminates pull-down resistors. $I_{OH1} > -1.5 \text{ mA}$
2 to 5, 7 to 10	OUTPUT 14 to 21	O	VFD tube grid electrode	High voltage driver outputs for driving VFD tube. The driver outputs are in phase with the corresponding latch outputs. The direct connection to the anode of a VFD tube eliminates pull-down resistors. $I_{OH1} > -6.0 \text{ mA}$
24	DATA OUT	O	Next Device	Serial data output pin of shift register. Data in output through the DATA OUT pin in synchronization with the CLOCK signal.
28	V_{DD}	—	Power supply	V_{DD} -GND are power supplies for internal logic. V_{DISP} -GND are power supplies for driving fluorescent tubes. Apply V_{DISP} after V_{DD} is applied.
29	V_{DISP}			
26	GND			
25	LOAD ENABLE	I	Micro- Controller	Latch signal input pin of display data latch logic. If the LOAD ENABLE pin is high, the data of the shift register is through. If the LOAD ENABLE pin is low, the data of the shift register does the latch.
27	BLANK_BAR	I	Micro- Controller	BLANK_BAR input pin with a built-in pull-up resistor. The BLANK_BAR pin is normally being set high. If the BLANK_BAR pin is low, the all driver outputs are "L" level.
30	DATA	I	Micro- Controller	Serial data input pin of the shift register. Display data (positive logic) is input in through the DATA pin synchronization with CLOCK.
31	CLOCK	I	Micro- Controller	Shift register clock input pin. Shift register reads data through DATA while the CLOCK pin is low state and the data in the shift register is shifted from one stage to the next stage at the rising edge of the CLOCK.

ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Condition	Rating	Unit
Supply Voltage (1)	V_{DD}	—	−0.3 to +6.5	V
Supply Voltage (2)	V_{DISP}	—	−0.3 to +25	V
Input Voltage	V_{IN}	—	−0.3 to $V_{DD}+0.3$	V
Output Voltage (1)	V_{O1}	DATA OUT	−0.3 to $V_{DD}+0.3$	V
Output Voltage (2)	V_{O2}	OUTPUT1 to 33	−0.3 to $V_{DISP}+0.3$	V
Storage Temperature	T_{STG}	—	−55 to +150	°C
Power Dissipation	P_D	$T_a < 105^{\circ}\text{C}$	266	mW
Output Current	I_{O1}	OUTPUT1 to 13, OUTPUT 22 to 33	−18.0 to +2.0	mA
	I_{O2}	OUTPUT 14 to 21	−4.5 to +2.0	
	I_{O3}	DATA OUT	−2.0 to +2.0	

RECOMMENDED OPERATING CONDITIONS

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit
Supply Voltage (1)	V_{DD}	When the power supply voltage is 5.0 V (typ.)	4.5	5.0	5.5	V
		When the power supply voltage is 3.3 V (typ.)	3.0	3.3	3.6	V
Supply Voltage (2)	V_{DISP}	—	8	—	18	V
CLOCK Frequency	f_{CLK}	—	—	—	5.0	MHz
Operating Temperature	T_a	—	−40	—	+105	°C

ELECTRICAL CHARACTERISTICS

DC Characteristics

(V_{DD} = 5.0 V ± 10% or 3.3 V ± 10%, V_{DISP} = 8 to 18 V, f_{CLK} = 5.0 MHz, Ta = -40 to +105°C, unless otherwise specified)

Parameter	Symbol	Applied pin	Condition	Min.	Typ.	Max.	Unit
High Level Input Voltage	V _{IH}	All inputs	V _{DD} = 5.0 V ± 10 %	0.7 V _{DD}	—	—	V
			V _{DD} = 3.3 V ± 10 %	0.8 V _{DD}	—	—	V

V_{OH} / V_{OL}	$0.8 V_{DISP} / 0.2 V_{DISP}$	$0.8 V_{DISP} / 0.2 V_{DISP}$
	$0.8 V_{DD} / 0.2 V_{DD}$	$0.8 V_{DD} / 0.2 V_{DD}$

FUNCTIONAL DESCRIPTION

General Description

The ML9270 is a CMOS multi-digit display driver and consists of a 34-bit shift register, a 33-bit latch, and a 33-bit VF tube driver.

Pin Description

(1) DATA

This is a serial data input terminal of the 34-stage shift register.

(2) CLOCK

This is a Clock input terminal of the shift register to shift an input signal at its leading edge.

(3) LOAD ENABLE

This is an input terminal to transfer the data from the shift register to the data latch circuit to hold it. After the data is held, the terminal initializes the data of the shift register. These functions are executed at the leading edge of an input signal.

(4) BLANK_BAR

This is an input terminal to turn all the OUTPUT terminals OFF(Low), which contains a pull-up resistor.

(5) OUTPUT1 to 33

These are output terminals for the VFD tube driver. Each terminal outputs data which is transferred from the corresponding bit of the shift register and held in the data latch circuit.

(6) DATA OUT

This is a data output terminal of the shift register to output data on the last stage of the 34-stage shift register.

(7) V_{DD}

This is a Logic power supply terminal.

(8) V_{DISP}

This is a driver output power supply terminal.

(9) GND

This is a grounding terminal.

Shift Register Numbers (Bit Numbers) and Corresponding OUTPUT Pin Names (OUTPUT Numbers)(Code 01)

Register No.	33	32	31	30	29	28	27	26	25	24	23	
OUTPUT No.	33	32	31	30	29	28	27	26	25	24	23	
Register No.	22	21	20	19	18	17	16	15	14	13	12	
OUTPUT No.	22	21	20	19	18	17	16	15	14	13	12	
Register No.	11	10	9	8	7	6	5	4	3	2	1	0
OUTPUT No.	11	10	9	8	7	6	5	4	3	2	1	DATA OUT

POWER-ON/OFF TIMING

To prevent IC from malfunctioning, after V_{DD} is applied as soon as possible that V_{DISP} is applied.
When turning off the power, after V_{DISP} is applied as soon as possible that V_{DD} is applied.

PACKAGE DIMENSIONS

(Unit: mm)

Notes for Mounting the Surface Mount Type Package

The surface mount type packages are very susceptible to heat in reflow mounting and humidity absorbed in storage. Therefore, before you perform reflow mounting, contact ROHM's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).

REVISION HISTORY

Document No.	Date	Page		Description
		Previous Edition	Current Edition	
PEDL9270-01	Apr. 14, 2005	—	—	Preliminary edition 1
PEDL9270-02	Jun. 23, 2005	—	—	Block Diagram: Addition of PLA Block Diagram: Addition P.O.R BLANK → $\overline{\text{BLANK}}$ Power Dissipation: TBD → 266mW Timing Diagram: reversal of BLANK signal $1/f_c \rightarrow f_{\text{CLK}}$
PEDL9270-03	Jun. 28, 2005	—	—	Block Diagram: Addition of Schmidt to Data AC: Addition of tPRZ, tPOF and tRSOFF AC: Addition of POR Timing DC: Addition of restriction to $\overline{\text{BLANK}}$ Power On/Off Timing: Addition of comment
PEDL9270-04	Jun. 30, 2005	—	—	Pin Configuration: N.C → N.C(GND) AC: Deleted of All Output Delay Time Condition
FEDL9270-01	Sep. 1, 2005	1, 2, 3, 5, 6 and 7	1, 2, 3, 5, 6 and 7	Changed the pin name from $\overline{\text{BLANK}}$ to BLANK_BAR.
		—	9	Added two sections.
		—	11	Added the "PACKAGE DIMENSIONS" Section.
			6	Changed the Load-enable pulse width to 400ns.

NOTICE

No copying or reproduction of this document, in part or in whole, is permitted without the consent of LAPIS Semiconductor Co., Ltd.

The content specified herein is subject to change for improvement without notice.

The content specified herein is for the purpose of introducing LAPIS Semiconductor's products (hereinafter "Products"). If you wish to use any such Product, please be sure to refer to the specifications, which can be obtained from LAPIS Semiconductor upon request.

Examples of application circuits, circuit constants and any other information contained herein illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.

Great care was taken in ensuring the accuracy of the information specified in this document. However, should you incur any damage arising from any inaccuracy or misprint of such information, LAPIS Semiconductor shall bear no responsibility for such damage.

The technical information specified herein is intended only to show the typical functions of and examples of application circuits for the Products. LAPIS Semiconductor does not grant you, explicitly or implicitly, any license to use or exercise intellectual property or other rights held by LAPIS Semiconductor and other parties. LAPIS Semiconductor shall bear no responsibility whatsoever for any dispute arising from the use of such technical information.

The Products specified in this document are intended to be used with general-use electronic equipment or devices (such as audio visual equipment, office-automation equipment, communication devices, electronic appliances and amusement devices).

The Products specified in this document are not designed to be radiation tolerant.

While LAPIS Semiconductor always makes efforts to enhance the quality and reliability of its Products, a Product may fail or malfunction for a variety of reasons.

Please be sure to implement in your equipment using the Products safety measures to guard against the possibility of physical injury, fire or any other damage caused in the event of the failure of any Product, such as derating, redundancy, fire control and fail-safe designs. LAPIS Semiconductor shall bear no responsibility whatsoever for your use of any Product outside of the prescribed scope or not in accordance with the instruction manual.

The Products are not designed or manufactured to be used with any equipment, device or system which requires an extremely high level of reliability the failure or malfunction of which may result in a direct threat to human life or create a risk of human injury (such as a medical instrument, transportation equipment, aerospace machinery, nuclear-reactor controller, fuel-controller or other safety device). LAPIS Semiconductor shall bear no responsibility in any way for use of any of the Products for the above special purposes. If a Product is intended to be used for any such special purpose, please contact a ROHM sales representative before purchasing.

If you intend to export or ship overseas any Product or technology specified herein that may be controlled under the Foreign Exchange and the Foreign Trade Law, you will be required to obtain a license or permit under the Law.
