

FEATURES:

- Step UP DC/DC LED driver
- Constant current output
- High efficiency up to 94%
- Soft Start
- PWM/Digital & Analog Voltage dimming
- Operating Temperature -40°C to +85°C
- Open and Short circuit LED Protection
- 2"x1" case package
- Drives LED strings of up to 48V

Maximum Soldering Temperature	1.5mm from case for 10sec.		260	°C

NOTES:

- To prevent burning out the driver, the output voltage must be 5.0VDC higher than the input voltage
- Do NOT exceed the maximum power ratings on each model
- With output ripple being rather low, it is recommended not to increase the additional output capacitor so as not to increase the delay while starting up under cool start conditions
- This series offers protection in case the output is shorted. After the short occurs, the input current will be cut off and recovers when the short is removed
- The reference value of under voltage protection (7.6V) means that under the condition of cool start and full discharge of output, the protection starts when input voltage is lower than 7.6V
- Note: PWM dimming means PWM signals are converted into mimic analog voltage by internal circuits and then do the dimming. The advantage of this approach is to reduce the EMI

Output Current Adjustment by External DC Control Voltage (VCTRL):

If V_{in} is between 9 VDC and 36 VDC it is recommended to use the circuit shown below

V_{in}	R1
5V	4.7K
12V	18K
24V	43K
36V	62K

Output Current Adjustment by PWM Control:

A Pulse Width Modulation (PWM) signal with a duty cycle DPWM can be applied to the DIM pin as shown below.

Driving DIM Via Open Collector Transistor

The DIM pin can also be driven via an open collector transistor as shown below.

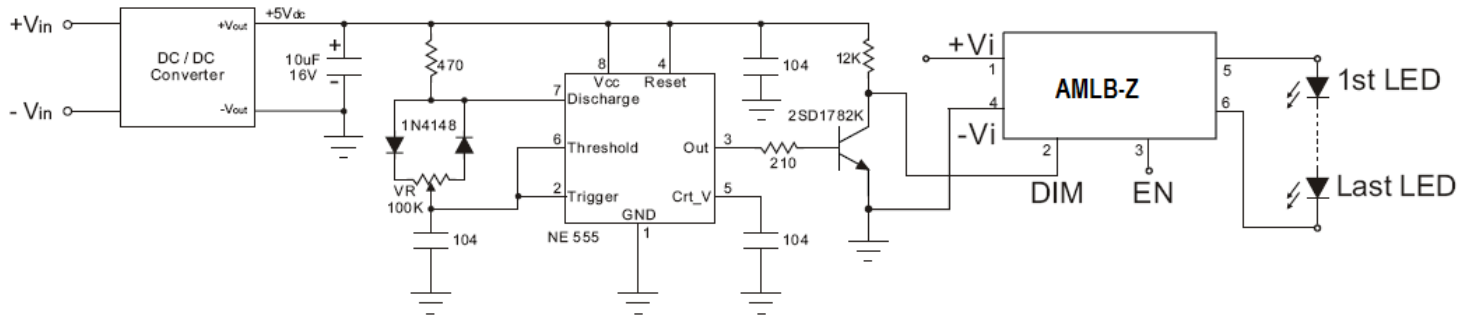

Driving the VADJ from a Microcontroller

The DIM can be driven from an open drain output of a microcontroller as shown below.

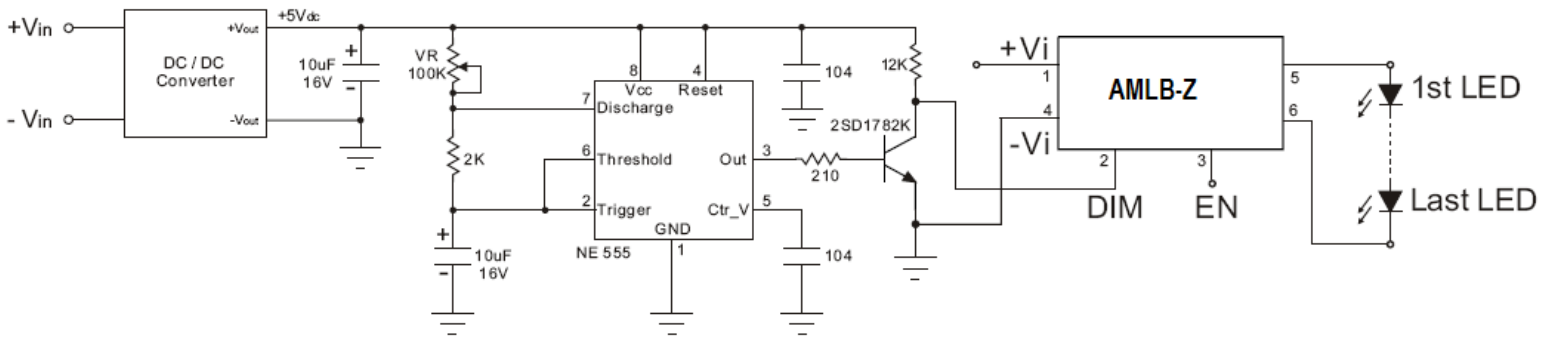

Output Current Adjustment by PWM Control (Dimming):

A PWM signal must have a frequency of greater than 100Hz to prevent any visible flicker.

Output Current Adjustment by PWM Control (Flash):

Output Current vs DIM Voltage:
