RFM products are now Murata products.

RO3150E

304 MHz SAW Resonator

- ***Designed for Low Power 304 MHz Transmitters***
- ***Very Low Series Resistance***
- ***Quartz Frequency Stability***
- ***Miniature 3.0 x 3.0 mm Surface-mount Case***
- ***Complies with Directive 2002/95/EC (RoHS)***

SM3030-6 Case

The RO3104E is a true one-port, surface-acoustic-wave (SAW) resonator in a surface-mount ceramic case. It provides reliable, fundamental-mode quartz frequency stabilization of fixed-frequency transmitters operating at 304 MHz. This SAW is designed specifically for transmitters used in wireless security and remote control applications.

Absolute Maximum Ratings

Rating	Value	Units
CW RF Power Dissipation (See Typical Test Circuit)	0	dBm
DC Voltage Between Terminals (Observe ESD Precautions)	5	VDC
Case Temperature	-40 to +85	°C
Maximum Soldering Profile Temperature (10 s, 5 cycles maximum)	+260	°C

Electrical Characteristics

Characteristic		Sym	Notes	Minimum	Typical	Maximum	Units
Frequency, +25 °C	Nominal Frequency	f_C	2, 3, 4, 5	303.925	304.000	304.075	MHz
	Tolerance from 304.000 MHz	Δf_C				±75	kHz
Insertion Loss		IL	2, 5, 6		1.35	2.0	dB
Quality Factor	Unloaded Q	Q_U	5, 6, 7		14,590		
	50 Ω Loaded Q	Q_L			2,100		
Temperature Stability	Turnover Temperature	T_O	6, 7, 8	10	25	40	°C
	Turnover Frequency	f_O			f_C		
	Frequency Temperature Coefficient	FTC			0.032		ppm/°C^2
Frequency Aging	Absolute Value during the First Year	$\|f_A\|$	1, 6		10		ppm/yr
DC Insulation Resistance between Any Two Terminals			5	1.0			MΩ
RF Equivalent RLC Model	Motional Resistance	R_M	5, 6, 7, 9,		16		Ω
	Motional Inductance	L_M			125		µH
	Motional Capacitance	C_M			2.1		fF
	Transducer Static Capacitance	C_O	5, 6, 9		3.8		pF
Test Fixture Shunt Inductance		L_{TEST}	2, 7		TBD		nH
Lid Symbolization		977 // YWWS					
Standard Reel Quantity	Reel Size 7 Inch		10	500 Pieces/Reel			
	Reel Size 13 Inch			3000 Pieces/Reel

CAUTION: Electrostatic Sensitive Device. Observe precautions for handling.

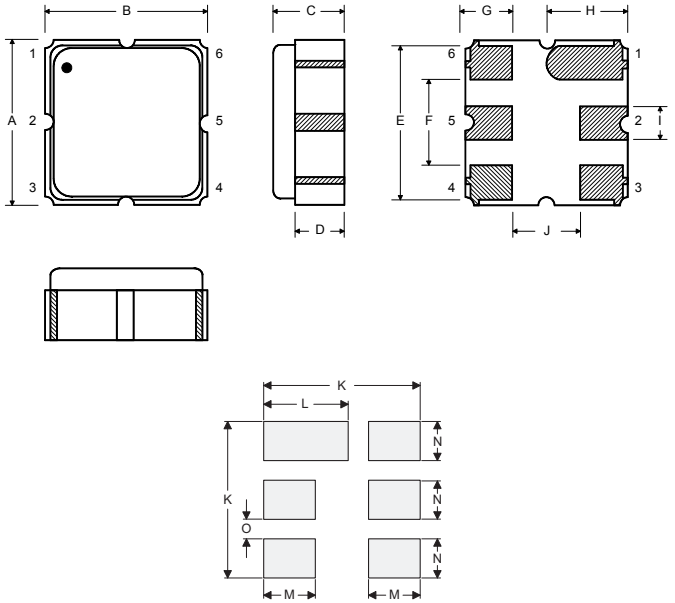

NOTES:

1. Frequency aging is the change in f_C with time and is specified at +65 °C or less. Aging may exceed the specification for prolonged temperatures above +65 °C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
2. The center frequency, f_C, is measured at the minimum insertion loss point, IL_{MIN}, with the resonator in the 50 Ω test system (VSWR ≤ 1.2:1). The shunt inductance, L_{TEST}, is tuned for parallel resonance with C_O at f_C. Typically, $f_{OSCILLATOR}$ or $f_{TRANSMITTER}$ is approximately equal to the resonator f_C.
3. One or more of the following United States patents apply: 4,454,488 and 4,616,197.
4. Typically, equipment utilizing this device requires emissions testing and government approval, which is the responsibility of the equipment manufacturer.
5. Unless noted otherwise, case temperature T_C = +25 ±2 °C.
6. The design, manufacturing process, and specifications of this device are subject to change.
7. Derived mathematically from one or more of the following directly measured parameters: f_C, IL, 3 dB bandwidth, f_C versus T_C, and C_O.
8. Turnover temperature, T_O, is the temperature of maximum (or turnover) frequency, f_O. The nominal frequency at any case temperature, T_C, may be calculated from: $f = f_O [1 - FTC (T_O - T_C)^2]$. Typically *oscillator* T_O is approximately equal to the specified *resonator* T_O.
9. This equivalent RLC model approximates resonator performance near the resonant frequency and is provided for reference only. The capacitance C_O is the static (nonmotional) capacitance between the two terminals measured at low frequency (10 MHz) with a capacitance meter. The measurement includes parasitic capacitance with "NC" pads unconnected. Case parasitic capacitance is approximately 0.05 pF. Transducer parallel capacitance can by calculated as: $C_P \approx C_O$ - 0.05 pF.
10. Tape and Reel Standard Per ANSI / EIA 481.

Electrical Connections

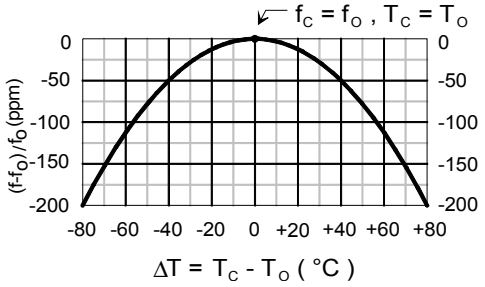

The SAW resonator is bidirectional and may be installed with either orientation. The two terminals are interchangeable and unnumbered. The callout NC indicates no internal connection. The NC pads assist with mechanical positioning and stability. External grounding of the NC pads is recommended to help reduce parasitic capacitance in the circuit.

Pin	Connection
1	NC
2	Terminal
3	NC
4	NC
5	Terminal
6	NC

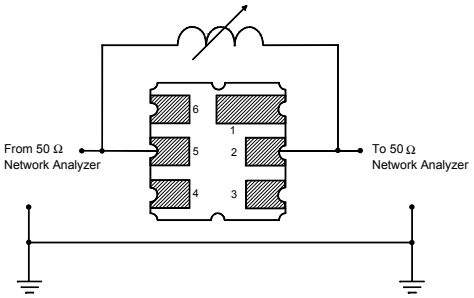

Temperature Characteristics

The curve shown accounts for resonator contribution only and does not include external LC component temperature effects.

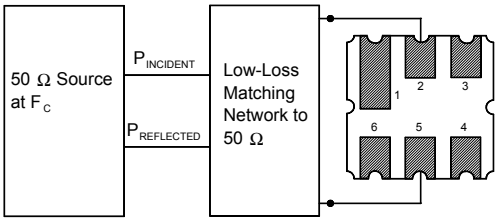

Characterization Test Circuit

Inductor L_{TEST} is tuned to resonate with the static capacitance, C_O, at F_C.
