

CC2591 2.4-GHz RF Front End

1 Device Overview

1.1 Features

- Seamless Interface to 2.4-GHz Low-Power RF Devices from Texas Instruments
- Output Power up to 22 dBm
- Few External Components
 - Integrated Switches
 - Integrated Matching Network
 - Integrated Balun
 - Integrated Inductors
 - Integrated PA
 - Integrated LNA
- Digital Control of LNA Gain by HGM Pin
- 100-nA in Power Down (EN = PAEN = 0)
- Low Transmit Current Consumption (100 mA at 3 V for 20-dBm Out, PAE = 33%)
- Low-Receive Current Consumption
 - 3.4 mA for High-Gain Mode
 - 1.7 mA for Low-Gain Mode
- 4.8-dB LNA Noise Figure, Including T/R Switch and External Antenna Match
- RoHS Compliant 4×4-mm QFN-16 Package
- 2-V to 3.6-V Operation

1.2 Applications

- All 2.4-GHz ISM Band Systems
- Wireless Sensor Networks
- Wireless Industrial Systems
- IEEE 802.15.4 and ZigBee® Systems
- Wireless Consumer Systems
- Wireless Audio Systems

1.3 Description

CC2591 is a cost-effective and high-performance RF front end for low-power and low-voltage 2.4-GHz wireless applications. The device is a range extender for all existing and future 2.4-GHz low-power RF transceivers, transmitters, and System-on-Chip products from TI. CC2591 increases the link budget by providing a power amplifier for increased output power, and an LNA with low noise figure for improved receiver sensitivity. The device provides a small size, high output power RF design with its 4-mm × 4-mm QFN-16 package. The device contains PA, LNA, switches, RF-matching, and balun for simple design of high-performance wireless applications.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE
CC2591RGV	RGV (16)	4.00 mm × 4.00 mm

(1) For more information, see [Section 7, Mechanical Packaging and Orderable Information](#).

2 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision A (June 2008) to Revision B	Page
• Changed format of data sheet to the latest TI standards	1

3 Terminal Configuration and Functions

The CC2591 pinout and description are shown in [Figure 3-1](#) and [Table 3-1](#), respectively.

Figure 3-1. PIN AND I/O CONFIGURATION (TOP VIEW)

NOTE

The exposed die attach pad **must** be connected to a solid ground plane as this is the primary ground connection for the chip. Inductance in vias to the pad should be minimized. It is highly recommended to follow the reference layout. Changes will alter the performance.

For best performance, minimize the length of the ground vias, by using a 4-layer PCB with ground plane as layer 2 when CC2591 is mounted onto layer 1.

3.1 Pin Attributes

Table 3-1. Pin Attributes

TERMINAL		TYPE	DESCRIPTION
NO.	NAME		
—	GND	Ground	The exposed die attach pad must be connected to a solid ground plane. See CC2591EM reference design for recommended layout.
1	AVDD_PA1	Power	2.0 V – 3.6 V Power. PCB trace to this pin serves as inductive load to PA . See CC2591EM reference design for recommended layout.
2	RF_N	RF	RF interface towards CC24xx or CC25xx device.
3	RXTX	Analog/Control	RXTX switching voltage when connected to CC24xx devices. See Table 5-2 and Table 5-3 for details.
4	RF_P	RF	RF interface towards CC24xx or CC25xx device
5	PAEN	Digital Input	Digital control pin. See Table 5-2 and Table 5-3 for details.
6	EN	Digital Input	Digital control pin. See Table 5-2 and Table 5-3 for details.
7	HGM	Digital Input	Digital control pin. HGM=1 → Device in High Gain Mode HGM=0 → Device in Low Gain Mode (RX only)
8, 9, 12, 14	GND	Ground	Secondary ground connections. Should be shorted to the die attach pad on the top PCB layer.
10	AVDD_PA2	Power	2.0 V – 3.6 V Power. PCB trace to this pin serves as inductive load to PA. See CC2591EM reference design for recommended layout.
11	ANT	RF	Antenna interface.
13	AVDD_LNA	Power	2 V – 3.6 V Power. PCB trace to this pin serves as inductive load to LNA. See CC2591EM reference design for recommended layout.
15	BIAS	Analog	Biasing input. Resistor between this node and ground sets bias current to PAs.
16	AVDD_BIAS	Power	2 V – 3.6 V Power.

4 Specifications

4.1 Absolute Maximum Ratings⁽¹⁾⁽²⁾

Under no circumstances must the absolute maximum ratings be violated. Stress exceeding one or more of the limiting values may cause permanent damage to the device.

PARAMETER		VALUE	UNIT
Supply voltage	All supply pins must have the same voltage	–0.3 to 3.6	V
Voltage on any digital pin		–0.3 to $V_{DD} + 0.3$, max 3.6	
Input RF level		10	dBm

- (1) Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to V_{SS} , unless otherwise noted.

4.2 Handling Ratings

			MIN	MAX	UNIT
T_{stg}	Storage temperature range		–50	150	°C
V_{ESD}	Electrostatic discharge (ESD) performance:	Human Body Model (HBM), per ANSI/ESDA/JEDEC JS001 ⁽¹⁾	–600	600	V
		Charged Device Model (CDM), per JESD22-C101 ⁽²⁾	–500	500	V

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

4.3 Recommended Operating Conditions

The operating conditions for CC2591 are listed below.

PARAMETER		MIN	MAX	UNIT
Ambient temperature range		–40	85	°C
Operating supply voltage		2	3.6	V
Operating frequency range		2400	2483.5	MHz

4.4 Electrical Characteristics

$T_C = 25^\circ\text{C}$, $V_{DD} = 3\text{ V}$, $f_{RF} = 2440\text{ MHz}$ (unless otherwise noted). Measured on CC2591EM reference design including external matching components.

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Receive current, High-Gain Mode	HGM = 1		3.4	4	mA
Receive current, Low-Gain Mode	HGM = 0		1.7	2	
Transmit current	$P_{IN} = 0.5\text{ dBm}$		112		
Transmit current	No input signal		40	50	
Power-down current	EN = PAEN = 0		0.1	0.3	μA
High-input level (control pins)	EN, PAEN, HGM, RXTX	1.3		V_{DD}	V
Low-input level (control pins)	EN, PAEN, HGM, RXTX			0.3	
Power down - Receive mode switching time			12		μs
Power down - Transmit mode switching time			1		μs
RF Receive					
Gain, High-Gain Mode	HGM = 1		11		dB
Gain, Low-Gain Mode	HGM = 0		1		dB
Gain variation, 2400 – 2483.5 MHz, High-Gain Mode	HGM = 1		1.3		dB
Gain variation, 2.0 V – 3.6 V, High-Gain Mode	HGM = 1		1.5		dB

Electrical Characteristics (continued)

$T_C = 25^\circ\text{C}$, $V_{DD} = 3\text{ V}$, $f_{RF} = 2440\text{ MHz}$ (unless otherwise noted). Measured on CC2591EM reference design including external matching components.

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Gain variation, $-40^\circ\text{C} - 85^\circ\text{C}$, High-Gain Mode	HGM = 1		3		dB
Noise figure, High-Gain Mode	HGM = 1, including internal T/R switch and external antenna match		4.8		dB
Input 1-dB compression, High-Gain Mode	HGM = 1		-17		dBm
Input IP3, High-Gain Mode	HGM = 1		-2		dBm
Input reflection coefficient, S11	HGM = 1, measured at antenna port		-11		dB
RF Transmit					
Gain			22		dB
Output power, P_{OUT}	$P_{IN} = 0.5\text{ dBm}$		20.6		dBm
Maximum output power	$P_{IN} = 5\text{ dBm}$		22		dBm
Power Added Efficiency, PAE	$P_{IN} = 0.5\text{ dBm}$		34%		
Output 1-dB compression			19		dBm
Output IP3			32		dBm
Output power variation over frequency	2400 – 2483.5 MHz, $P_{IN} = 0.5\text{ dBm}$		0.5		dB
Output power variation over power supply	2 V – 3.6 V, $P_{IN} = 0.5\text{ dBm}$		3.5		dB
Output power variation over temperature	$-40^\circ\text{C} - 85^\circ\text{C}$, $P_{IN} = 0.5\text{ dBm}$		1.5		dB
Second harmonic power	$P_{IN} = 0.5\text{ dBm}$. The second harmonic can be reduced to below regulatory limits by using an external LC filter and antenna.		-15		dBm
Third harmonic power	$P_{IN} = 0.5\text{ dBm}$. The third harmonic can be reduced to below regulatory limits by using an external LC filter and antenna.		-30		dBm

4.5 Thermal Resistance Characteristics for RGV Package

NAME	DESCRIPTION	$^\circ\text{C/W}^{(1) (2)}$	AIR FLOW (m/s) ⁽³⁾
RO_{JC-top}	Junction-to-case (top)	52.8	0.00
RO_{JB}	Junction-to-board	20.4	0.00
RO_{JA}	Junction-to-free air	41.9	0.00
PSI_{JT}	Junction-to-package top	1.4	0.00
PSI_{JB}	Junction-to-board	20.5	0.00
$RO_{JC-bottom}$	Junction-to-case (bottom)	8.3	0.00

(1) $^\circ\text{C/W}$ = degrees Celsius per watt.

(2) These values are based on a JEDEC-defined 2S2P system (with the exception of the Theta JC [RO_{JC}] value, which is based on a JEDEC-defined 1S0P system) and will change based on environment as well as application. For more information, see these EIA/JEDEC standards:

- JESD51-2, *Integrated Circuits Thermal Test Method Environmental Conditions - Natural Convection (Still Air)*
- JESD51-3, *Low Effective Thermal Conductivity Test Board for Leaded Surface Mount Packages*
- JESD51-7, *High Effective Thermal Conductivity Test Board for Leaded Surface Mount Packages*
- JESD51-9, *Test Boards for Area Array Surface Mount Package Thermal Measurements*

(3) m/s = meters per second.

4.6 Typical Characteristics

5 Applications, Implementation, and Layout

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

5.1 CC2591EM Evaluation Module

TL131	Transmission line. Will affect LNA resonance.	See CC2591EM reference design.
R151	Bias resistor	4.3 kΩ: RK73H1ETTP4301F from Koa

5.2 Controlling the Output Power from CC2591

The output power of CC2591 is controlled by controlling the input power. The CC2591 PA is designed to work in compression (class AB), and the best efficiency is reached when a strong input signal is applied.

5.2.1 Input Levels on Control Pins

The four digital control pins (PAEN, EN, HGM, RXTX) have built-in level-shifting functionality, meaning that if the CC2591 is operating from a 3.6-V supply voltage, the control pins will still sense 1.6-V - 1.8-V signals as logical '1'.

An example of the above would be that RXTX is connected directly to the RXTX pin on CC24xx, but the global supply voltage is 3.6 V. The RXTX pin on CC24xx will switch between 0 V (RX) and 1.8 V(TX), which is still a high enough voltage to control the mode of CC2591.

The input voltages should however not have logical '1' level that is higher than the supply.

5.2.2 Connecting CC2591 to a CC24xx Device

Table 5-2. Control Logic for Connecting CC2591 to a CC24xx Device

PAEN = EN	RXTX	HGM	MODE OF OPERATION
0	X	X	Power Down
1	0	0	RX Low Gain Mode
1	0	1	RX High Gain Mode
1	1	X	TX

Figure 5-2. CC2591 + CC24xx Application Circuit

5.2.3 Connecting CC2591 to the CC2500, CC2510, or CC2511 Device

Table 5-3. Control Logic for Connecting CC2591 to a CC2500/10/11 Devices

PAEN	EN	RXTX	HGM	MODE OF OPERATION
0	0	NC	X	Power Down
0	1	NC	0	RX LGM
0	1	NC	1	RX HGM
1	0	NC	X	TX
1	1	NC	X	Not allowed

6 Device and Documentation Support

6.1 Device Support

6.1.1 Development Support

TI offers an extensive line of development tools, including tools to evaluate the performance of the processors, generate code, develop algorithm implementations, and fully integrate and debug software and hardware modules. The tool's support documentation is electronically available within the Code Composer Studio™ Integrated Development Environment (IDE).

The following products support development of the CC2591 device applications:

Software Development Tools: Code Composer Studio™ Integrated Development Environment (IDE): including Editor C/C++/Assembly Code Generation, and Debug plus additional development tools Scalable, Real-Time Foundation Software (DSP/BIOS™), which provides the basic run-time target software needed to support any CC2591 device application.

Hardware Development Tools: Extended Development System (XDS™) Emulator

For a complete listing of development-support tools for the CC2591 platform, visit the Texas Instruments website at www.ti.com. For information on pricing and availability, contact the nearest TI field sales office or authorized distributor.

6.1.2 Device Nomenclature

To designate the stages in the product development cycle, TI assigns prefixes to the part numbers of all microprocessors (MPUs) and support tools. Each device has one of three prefixes: X, P, or null (no prefix) (for example, CC2591). These prefixes represent evolutionary stages of product development from engineering prototypes (TMDX) through fully qualified production devices and tools (TMDS).

Device development evolutionary flow:

- X** Experimental device that is not necessarily representative of the final device's electrical specifications and may not use production assembly flow.
- P** Prototype device that is not necessarily the final silicon die and may not necessarily meet final electrical specifications.
- null** Production version of the silicon die that is fully qualified.

Support tool development evolutionary flow:

X and P devices are shipped against the following disclaimer:

"Developmental product is intended for internal evaluation purposes."

Production devices have been characterized fully, and the quality and reliability of the device have been demonstrated fully. TI's standard warranty applies.

Predictions show that prototype devices (X or P) have a greater failure rate than the standard production devices. Texas Instruments recommends that these devices not be used in any production system because their expected end-use failure rate still is undefined. Only qualified production devices are to be used.

TI device nomenclature also includes a suffix with the device family name. This suffix indicates the package type (for example, RGV) and the temperature range (for example, blank is the default commercial temperature range). provides a legend for reading the complete device name for any CC2591 device.

For orderable part numbers of CC2591 devices in the RGV package types, see the Package Option Addendum of this document, the TI website (www.ti.com), or contact your TI sales representative.

6.2 Documentation Support

The following documents describe the CC2591 processor. Copies of these documents are available on the Internet at www.ti.com.

SWRA351	Antenna Quick Guide

6.2.1 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

[TI E2E™ Online Community](#) *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

[TI Embedded Processors Wiki](#) *Texas Instruments Embedded Processors Wiki*. Established to help developers get started with Embedded Processors from Texas Instruments and to foster innovation and growth of general knowledge about the hardware and software surrounding these devices.

6.3 Trademarks

E2E is a trademark of Texas Instruments.

ZigBee is a registered trademark of ZigBee Alliance.

6.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

6.5 Export Control Notice

Recipient agrees to not knowingly export or re-export, directly or indirectly, any product or technical data (as defined by the U.S., EU, and other Export Administration Regulations) including software, or any controlled product restricted by other applicable national regulations, received from disclosing party under nondisclosure obligations (if any), or any direct product of such technology, to any destination to which such export or re-export is restricted or prohibited by U.S. or other applicable laws, without obtaining prior authorization from U.S. Department of Commerce and other competent Government authorities to the extent required by those laws.

6.6 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

7 Mechanical Packaging and Orderable Information

7.1 Packaging Information

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
CC2591RGVR	ACTIVE	VQFN	RGV	16	2500	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 85	CC2591	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. - NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - This drawing is subject to change without notice.
 - Quad Flatpack, No-leads (QFN) package configuration.
 - The package thermal pad must be soldered to the board for thermal and mechanical performance.
 - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
 - Falls within JEDEC MO-220.

PLASTIC QUAD FLATPACK NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Publication IPC-7351 is recommended for alternate designs.
 - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, QFN Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - Customers should contact their board fabrication site for solder mask tolerances.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
