MODEL NUMBER: N201-SR2-BK

Cat6 UTP patch cord connects Gigabit Ethernet network components like routers, servers, and switches in high-density data centers.

Features

Right-Angle Cat6 Patch Cable Connects Network Equipment in High-Density Data Centers This Cat6 UTP patch cable is ideal for connecting network components, such as printers, computers, copiers, routers, servers, modems and switches, in high-density data centers. Designed for fast transmission and excellent signal quality, this RJ45 patch cable ensures data transfer speeds up to 1 Gbps throughout your Gigabit Ethernet network.

Right-Angle RJ45 Patch Cable Makes Connecting and Disconnecting Easier Space-saving right-angle RJ45 male connectors are easy to plug into patch panels and switches located in adjoining spaces inside a rack. The plugs' snagless design protects the locking tabs against being damaged or broken off during installation.

Special Slim Design Increases the Flow of Cool Air to Protect Your Equipment High-quality 28 AWG stranded copper wire protected by a PVC jacket, this right-angle RJ45 patch cable is more than 35% smaller in diameter than standard Cat6 cable. The slim design not only helps increase the flow of cool air through tight spaces, but also makes it easier to install the cable around corners, through cable management panels and in congested rack enclosures.

Color-Coded to Avoid Misidentification That Can Cause Costly Downtime This right-angle Cat6 patch cable features a black PVC jacket and molded black ends. The color-coding allows easy, fast identification in a crowded rack or workstation and helps prevent the cable from becoming inadvertently disconnected.
