

Description

Designed to convert fixed voltages into an isolated regulated voltage, the VIBLSD1-DIP series is well suited for providing board-mount local supplies in a wide range of applications, including mixed analog/digital circuits, test & measurement equip., process/machine controls, data-com/telecom fields, etc...

Features

- Isolated 1 W output
- Regulated
- High efficiency to 79%
- Single voltage output
- Small footprint
- DIP package style
- Industry standard pinout
- UL94-V0 package
- No heatsink required
- 1K Vdc isolation
- Temperature range: -40°C~+85°C
- No external component required
- Low cost

Model Number	Input Voltage		Output Voltage	Output Current		Efficiency	Package Style
	Nominal	Range		Max.	Min.		
VIBLSD1-S5-S5-DIP	5 Vdc	4.75~5.25 Vdc	5 Vdc	150 mA	15 mA	69%	DIP

Note:

1. All specifications measured at TA=25°C, humidity <75%, nominal input voltage and rated output load unless otherwise specified.

Output Specifications

Item	Test conditions	Min.	Typ.	Max.	Units
Output power		0.1		1	W
Line Regulation	For Vin change of 1%			0.25	%
Load Regulation	10% to 100% full load			1	%
Output voltage accuracy	100% full load			±3	%
Temperature drift	@ 100% load			0.03	%/°C
Output ripple	20 Hz to 300 KHz Bandwidth		10	20	mVp-p
Switching frequency	Full load, nominal input		100		KHz

General Specifications

Short circuit protection	<1 second
Temperature rise at full load	25°C Max, 15°C Typ.
Cooling	Free air convection
No-load power consumption	10% nominal power (typical)
Operating temperature range	-40°C to +85°C
Storage temperature range	-55°C to +125°C
Soldering temperature	<= 300°C (1.5mm from case for 10 sec.)
Storage humidity range	<95%
Case material	Plastic (UL94-V0)
MTBF	>3,500,000 hrs.
Burn-in	At +85°C, for 4 hours at no-load and 4 hours at full load.

Isolation Specifications

Item	Test Conditions	Min.	Typ.	Max.	Units
Isolation Voltage	Tested for 1 min.	1000			Vdc
Insulation Resistance	Test at 500 Vdc	1000			M Ω

Application Notes:
- Input filtering

To reduce the reflected ripple current and minimize EMI, especially when the converter input is more than 2" away from the DC source, it is recommended to connect a low ESR electrolytic capacitor between Vin and Gnd. The values suggested are as shown in Table 1. If additional filtering is required, the capacitance may be increased, or expanded to an LC network as shown in Figure 1.

Table 1

Input Voltage	External Input Capacitance
5 V	4.7 μ F
12 V	2.2 μ F
24 V	1.0 μ F

- Output filtering

An output capacitor as shown in Table 2 may be used to reduce output ripples and noise.

requirements as shown in Table 2.

Output capacitance may be increased for additional filtering, but should not exceed 10 μ F. It can also be expanded to an LC network as in Figure 1.

Table 2

Vout	External Output Capacitance
5 V	10 μ F
9 V	4.7 μ F
12 V	2.2 μ F
15 V	1 μ F

- Minimum loading

The converter needs a minimum of 10% loading to maintain output regulation. Operation under no-load conditions will not cause immediate damages but may reduce reliability, and cause performance not to meet specifications.

- Protection

The converter has minimal protection against input over-voltage or output over-load, and may be permanently damaged if exposed to these conditions. An input clamping device can be used for input voltage limiting. An input fuse or an output fuse can also be used to protect against over-loading.

- Unregulated input

As fixed input converters, this series can accept voltages within a limited range of the nominal input. Otherwise the converter may not function properly or may be damaged. An optional regulator can be used at the input to bring voltage within regulation, as shown in Figure 2.
