Compact, Small Package 100mA Power-Distribution Switches

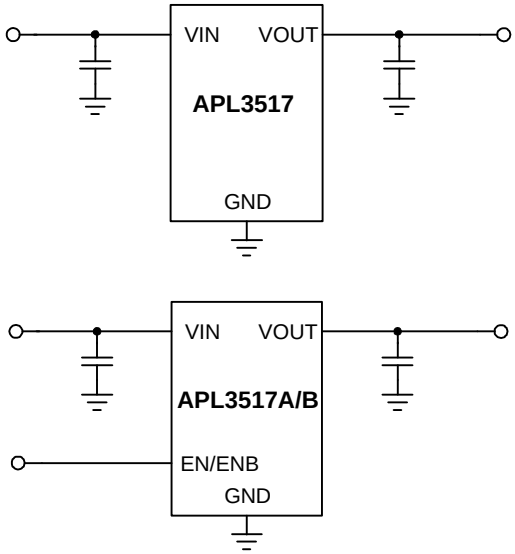

Features

- **High Side N-MOSFET with Internal Charge Pump**
- **0.1A Continuous Current**
- **Built-in Soft-Start**
- **Wide Supply Voltage Range**
- **Current-Limit Protection**
- **Input Voltage Under Voltage Lockout Protection**
- **Reverse Current Blocking when Switch Disabled**
- **Output OVP Protection**
- **Reverse Current-Limit Protection**
- **Output Discharge**
- **Over-Temperature Protection**
- **UL Approved-File No.E328191**
- **Nemko IEC 60950-1 : 2005(2nd Edition); Am 1:2009 CB; EN60950-1:2006; A11: 2009; A1: 2010 Scheme Certified, No 65711**
- **Lead Free and Green Devices Available (RoHS Compliant)**

Applications

- **HDMI Port Protection Switches**
- **Bluetooth Protection Switches**
- **High-side Power Protection Switches**

Simplified Application Circuit

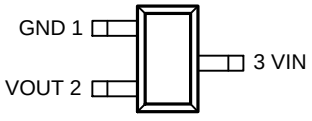

General Description

The APL3517/A/B is a power-distribution switch with current- limiting function and output OVP protections that can deliver current up to 0.1A. The device incorporates a 250mΩ N-channel MOSFET power switch.

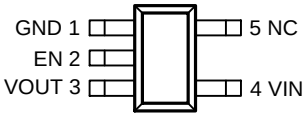

The device integrates some protection features, including current-limit protection, output over-voltage protection, over-temperature protection and UVLO. The current-limit protection can protect down-stream devices from catastrophic failure by limiting the output current at current-limit threshold during over-load or short-circuit events. The output over-voltage protection can prevent current flowing from VOUT to VIN when an abnormally high voltage exists in VOUT. The over-temperature protection function shuts down the N-channel MOSFET power switch when the junction temperature rises beyond 140°C and will automatically turns on the power switch when the temperature drops by 20°C. The UVLO function keeps the power switch in off state until there is a valid input voltage present.

The device is available in lead free SOT-23-3 and SOT-23-5 packages.

APL3517B B:	L7BX	X - Date Code

Note: ANPEC lead-free products contain molding compounds/die attach materials and 100% matte tin plate termination finish; which are fully compliant with RoHS. ANPEC lead-free products meet or exceed the lead-free requirements of IPC/JEDEC J-STD-020D for MSL classification at lead-free peak reflow temperature. ANPEC defines “Green” to mean lead-free (RoHS compliant) and halogen free (Br or Cl does not exceed 900ppm by weight in homogeneous material and total of Br and Cl does not exceed 1500ppm by weight).

Absolute Maximum Ratings (Note 1)

Symbol	Parameter	Rating	Unit
V_{IN}	VIN to GND Voltage	-0.3 ~ 6.5	V
V_{OUT}	VOUT to GND Voltage	-0.3 ~ 6.5	V
V_{EN}, V_{ENB}	EN, ENB to GND Voltage	-0.3 ~ 6.5	V
T_J	Maximum Junction Temperature	-40 ~ 150	°C
T_{STG}	Storage Temperature	-65 ~ 150	°C
T_{SDR}	Maximum Lead Soldering Temperature (10 Seconds)	260	°C

Note1: Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Thermal Characteristics (Note 2)

Symbol	Parameter	Typical Value	Unit
θ_{JA}	Junction-to-Ambient Resistance in free air (SOT-23-3, SOT-23-5)	260	°C/W

Note 2: θ_{JA} is measured with the component mounted on a high effective thermal conductivity test board in free air.

Recommended Operating Conditions (Note 3)

Symbol	Parameter	Range	Unit
V_{IN}	VIN Input Voltage	2.7~ 5.25	V
I_{OUT}	OUT Output Current	0 ~ 0.1	A
T_A	Ambient Temperature	-40 ~ 85	°C
T_J	Junction Temperature	-40 ~ 125	°C

Note 3: Refer to the typical application circuit.

Electrical Characteristics

V_{IN}=5V, V_{EN}=5V or V_{ENB}=0V and T_A=25°C (unless otherwise noted).

Symbol	Parameter	Test Conditions	APL3517/A/B			Unit
			Min.	Typ.	Max.

Pin Description

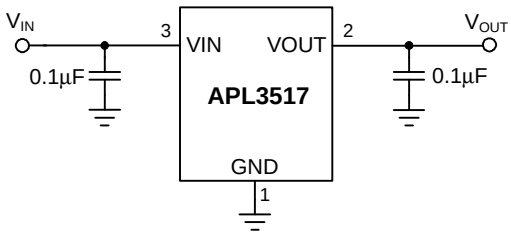

PIN			FUNCTION
NO.		NAME	
SOT-23-3	SOT-23-5		
1	1	GND	Ground.
2	3	VOUT	Output Voltage Pin. The output voltage follows the input voltage. When EN is low or V_{IN} is UVLO, the output voltage is discharged by an internal resistor.
3	4	VIN	Power Supply Input Connect this pin to external DC supply.
-	2	EN/ENB	Pulling the ENB above 2V or EN below 0.8V will disable the device, and pulling ENB pin below 0.8V or EN above 2V will enable the device. The EN and ENB pins cannot be left floating.
-	5	NC	Not Connected Internally.

Typical Application Circuit

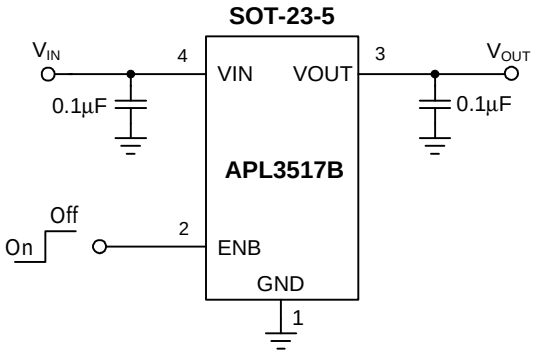

SOT-23-3

SOT-23-5

SOT-23-5

Function Description

VIN Under-voltage Lockout (UVLO)

The APL3517/A/B power switch has a built-in under-voltage lockout circuit to keep the output shut off until internal circuitry is operating properly. The UVLO circuit has hysteresis and a de-glitch feature so that it will typically ignore undershoot transients on the input. When input voltage exceeds the UVLO threshold, the output voltage starts a soft-start to reduce the inrush current.

Power Switch

The power switch is an N-channel MOSFET with a low $R_{DS(ON)}$. The internal power MOSFET does not have the body diode. When IC is in UVLO state, the MOSFET prevents a current flowing from the VOUT back to VIN and VIN to VOUT.

Current-Limit Protection

The APL3517/A/B power switch provides the current-limit protection function. During current-limit, the devices limit output current at current-limit threshold. For reliable operation, the device should not be operated in current-limit for extended period time.

Soft-Start

The APLA3517/A/B has a built-in output soft-start control to limit the current surge during start-up. The soft-start interval is 2.5ms.

Output Over-Voltage Protection

The output over-voltage protection is implemented by 2 either sensing mechanisms. One is by sensing when V_{OUT} voltage is above V_{OVP} threshold, the internal power MOSFET is turned off. The other is by sensing when reverse current, flowing from VOUT to VIN, surpasses I_{RV}. When the reverse current reachers the reverse current Blocking threshold, the device limits the reveres current at I_{RV} threshold level. When the reverse current fault exists for more than 0.7ms, the internal power MOSFET is turned off. The internal power MOSFET is allowed to turn-on once the output voltage gose below V_{IN}-1V.

Output Discharge

When the input voltage is under VIN UVLO Threshold or V_{EN}=Low or V_{ENB}=High, the output discharge device is turned on to discharge the output voltage.

Enable/Disable (SOT-23-5)

Pulling the ENB above 2V or EN below 0.8V will disable the device, and pulling ENB pin below 0.8V or EN above 2V will enable the device.
When the IC is disabled the supply current is reduced to less than 1μA. The enable input is compatible with both TTL and CMOS logic levels. The EN/ENB pins cannot be left floating.

Over-temperature Protection

When the junction temperature exceeds 140°C, the internal thermal sense circuit turns off the power FET and allows the device to cool down. When the device's junction temperature cools by 20°C, the internal thermal sense circuit will enable the device, resulting in a pulsed output during continuous thermal protection. Thermal protection is designed to protect the IC in the event of over-temperature conditions. For normal operation, the junction temperature cannot exceed T_J=+125°C.

Application Information

Input Capacitor

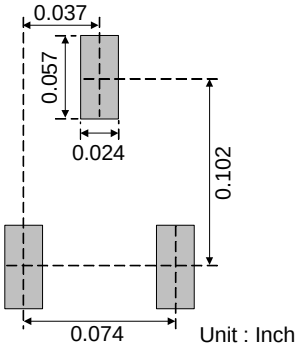

0.1µF ceramic bypass capacitor from V_{IN} to GND, located near the APL3517/A/B, is strongly recommended to suppress the ringing during short circuit fault event. Without the bypass capacitor, the output short may cause sufficient ringing on the input (from supply lead inductance) to damage internal control circuitry.

Layout Consideration

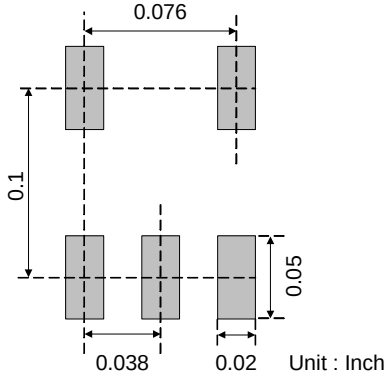

The PCB layout should be carefully performed to maximize thermal dissipation and to minimize voltage drop, droop and EMI. The following guidelines must be considered:

1. Please place the input capacitors near the VIN pin as close as possible.
2. Output decoupling capacitors for load must be placed near the load as close as possible for decoupling high-frequency ripples.
3. Locate APL3517/A/B and output capacitors near the load to reduce parasitic resistance and inductance for excellent load transient performance.
4. The negative pins of the input and output capacitors and the GND pin must be connected to the ground plane of the load.
5. Keep V_{IN} and V_{OUT} traces as wide and short as possible.
