

DATA SHEET

# SMP1302 Series: Switch and Attenuator Plastic Packaged PIN Diodes

## Applications

- TV distribution and cellular base stations
- High volume switch and attenuators

## Features

- Designed for base station and handset applications
- Low-distortion design
- Available in tape and reel packaging
- Packages rated MSL1 @ 260 °C per JEDEC J-STD-020

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

## Description

The SMP1302 series of plastic packaged, surface mountable, low capacitance (0.3 pF) silicon PIN diodes is designed for high-volume switch and attenuator applications from 10 MHz to beyond 10 GHz.

These diodes are designed for use in low-distortion TEE attenuators with low drive current (maximum resistance at 1 mA is 10 Ω) commonly used in TV distribution and cellular base station applications. The nominal 50 μm I region width, combined with a maximum resistance of 3 Ω at 10 mA, makes these diodes useful in large signal switch applications.

The SMP1302 series provides single, dual, and quad diodes in a selection of plastic packages including SOT-23, SOD-323, SC-79, SC-70, SC-88, and a small footprint SOD-882.

Table 1 describes the various packages and marking of the SMP1302 series.

 The Pb-free symbol or “LF” in the part number denotes a lead-free, RoHS-compliant package unless otherwise noted as Green™. Tin/lead (Sn/Pb) packaging is not recommended for new designs.

**SMP1302-078LF Pinout**

Table 2 provides the signal pin assignments for the 6-pin SC-88 quad common cathode package.

**Electrical and Mechanical Specifications**

The absolute maximum ratings of the SMP1302 series are provided in Table 3. Electrical specifications are provided in

Table 4. Resistance versus temperature measurements are provided in Table 5.

Typical performance characteristics of the SMP1302 series are illustrated in Figures 1 to 4. Package dimensions are shown in Figures 5 to 15 (odd numbers), and tape and reel dimensions are provided in Figures 6 to 16 (even numbers).

Operating temperature	$T_A$	-65	+150	°C
Electrostatic discharge: Human Body Model (HBM), Class 1C	ESD	1000	2000	V

**Note:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**CAUTION:** Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

## Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SMP1302 series is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering.

For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
