ZERO INSERTION FORCE

CONNECTORS

Cannon

ITT Industries
Engineered for life

1999

The Cannon Zero Insertion Force (ZIF) series of connectors provide versatile low-cost, high performance, multiple-wire power and signal connectors. This series can be mated/unmated in less than two seconds even with as many as 2,496 contacts. The long life and rapid mating are achieved through the ZIF design, where contacts in the plug and receptacle design do not touch each other while the connector halves are being engaged.

DL Product Introduction

The Cannon DL Series of Zero Insertion Force (ZIF) connectors fill the need in the medical, commercial/industrial, computer and peripheral equipment market places for low-cost, high performance multiple-wire power and signal connectors.

DL connectors feature: a **minimum** rated life of 10,000 complete mating and unmating cycles with no performance loss; can be mated and unmated in less than two seconds even with as many as 2496 contacts; and they cost less (often as much as 25% less) per mated line than singular high-density rack-and-panel connectors.

Simple. Effective. Reliable. Durable.

Combining their special design with commercial-grade materials and low cost crimp, PCB and wrappable hermaphroditic contacts, that may be hand or machine terminated, makes the DL Series of ZIF connectors the finest low-cost-per-mated-line I/O connectors available today.

Materials and Finishes

DL1/2/3 Housing	Glass filled thermoplastic, UL 94V-1 rated, Color: Black
DL5 Housing	Glass filled thermoplastic, UL 94V-0 rated, Color: Black
Crimp Contact*	Copper alloy, 50 μ inches gold over 50 μ inches nickel in mating area, gold flash on balance
	Copper alloy, 20 μ inches gold over 50 μ inches nickel in mating area, tin lead on balance
Square Post Contact	Copper alloy, 50 μ inches gold over 50 μ inches nickel in mating area, gold flash on balance
	Copper alloy, 20 μ inches gold over 50 μ inches nickel in mating area, gold flash on balance
Actuating Camshaft	Stainless steel, Passivated
Insulator Retainer (Plug Only)	Stainless steel, Passivated

*Order crimp contacts separately, see pages 52-53.

DLM Product Introduction

Cannon has expanded the DL-ZIF Series offering with the addition of the DLM (Metal Shell) versions. The DLM uses a rugged nickel plated aluminum housing. The Shield-Locking Mechanism feature (see illustration below) ensures uniform mating pressure around the perimeter of the mated connector to create an EMI/RFI shield. Facilitates compliance of equipment to CE EMC directives.

The DLM1/2/3 connectors are an extension of the DL line, similar to the current DLM5 and DLM6 products. The DLM series connectors are interchangeable to the DL (Plastic) versions for backwards/forwards compatibility.

The DLM Series are offered with the 3,18(.125) long 0,64(.025) square post 50μ inch gold contacts, as well as the 4,50(.177) long Ø 0,50(.020) PC/RC round tail contacts.

Materials and Finishes

DLM1/2/3/5/6 Housing	Aluminum alloy, nickel plated
DLM1/2/3/5/6 Insulator	Glass filled thermoplastic, UL 94V-0 rated, Color: Black
Crimp Contact*	Copper alloy, 50μ inches gold over 50μ inches nickel in mating area, gold flash on balance
	Copper alloy, 20μ inches gold over 50μ inches nickel in mating area, tin lead on balance
Square Post Contact	Copper alloy, 50μ inches gold over 50μ inches nickel in mating area, gold flash on balance
	Copper alloy, 20μ inches gold over 50μ inches nickel in mating area, gold flash on balance
PC/RC Contact	Copper alloy, 20μ inches gold over nickel in mating area, tin lead on balance
Actuating Camshaft	Stainless steel, Passivated
Insulator Retainer (Plug Only)	Stainless steel, Passivated

* Order crimp contacts separately, see pages 52-53.

DLD Drawer Product Introduction

Cannon has combined Zero Insertion Force (ZIF) technology with remote electrical engagement. The DLD Drawer allows the movement of a drawer or panel to effortlessly mate/unmate the connector halves. As an example: electrical sub-systems can be easily removed for service, interchangeability, or portability.

By specifying DLD Drawer interconnect systems, your packaging design is simplified as the need for expensive, complicated, and space-consuming manual actuation mechanisms is eliminated. Tight space requirements no longer restrict your use of ZIF connectors.

The contacts in the DLD Drawer product line do not touch each other while the connector halves are mating. This unique ZIF technology, introduced in the Cannon DL series in the early 1970's, has time-tested proven reliability and durability.

The DLD Drawer's remote mating feature utilizes the axial thrust of a cam to move and mate the contacts. At the end of the cam travel, the cam ramps on a flat surface thereby negating any uncoupling forces.

This rack-and-panel connector is available with crimp or square post contacts, allowing cable, PCB, or flat-flex termination.

Materials and Finishes

DLD1/2 Housing	Glass Filled thermoplastic, UL 94V-1 rated, Color: Black
Crimp Contact*	Copper alloy, 50μ inches gold over 50μ inches nickel in mating area, gold flash on balance
	Copper alloy, 20μ inches gold over 50μ inches nickel in mating area, tin lead on balance
Square Post Contact	Copper alloy, 50μ inches gold over 50μ inches nickel in mating area, gold flash on balance
	Copper alloy, 20μ inches gold over 50μ inches nickel in mating area, gold flash on balance
Insulator Retainer (Plug Only)	Stainless steel, Passivated
Actuating Camshaft (Receptacle Only)	Stainless steel
Spring Mounting Screw (Receptacle Only)	Stainless steel, Passivated
Compression Spring (Receptacle Only)	Music wire, zinc plated

* Order crimp contacts separately, see pages 52-53.

DL4 Product Introduction

The Cannon DL4 Series of Zero Insertion Force (ZIF) connectors fill the need in the commercial/industrial, aerospace/military, computer and peripheral equipment marketplaces for low-cost, high performance multiple wire power and signal connectors. The DL4 Series is a panel mounted connector with easy actuating lever from the side.

DL connectors feature: a **minimum** rated life of 20,000 complete mating and unmating cycles with no performance loss; can be mated and unmated in less than two seconds even with as many as 2496 contacts; and they cost less (often as much as 25% less) per mated line than singular high-density rack-and-panel connectors.

Simple. Effective. Reliable. Durable.

Combining their special design with commercial-grade materials and low cost crimp, PCB and wrappable hermaphroditic contacts, that may be hand or machine terminated, makes the DL Series of ZIF connectors the finest low-cost-per-mated-line I/O connectors available today.

Materials and Finishes

DL4 Insulator	Glass filled thermoplastic, UL 94V-1 rated, Color: Gray
DL4 Housing Frame	Aluminum alloy, cadmium plated
DL4 Mounting Plate	Aluminum alloy, clear anodized
Crimp Contact*	Copper alloy, 50μ inches gold over 50μ inches nickel in mating area, gold flash on balance
	Copper alloy, 20μ inches gold over 50μ inches nickel in mating area, tin lead on balance
Square Post Contact	Copper alloy, 50μ inches gold over 50μ inches nickel in mating area, gold flash on balance
	Copper alloy, 20μ inches gold over 50μ inches nickel in mating area, gold flash on balance
Actuating Camshaft	Stainless steel, Passivated
Insulator Retainer (Plug Only)	Stainless steel, Passivated

*Order crimp contacts separately, see pages 52-53.

DL/DLM Product Features

- High pin count: 60, 96, 156, 260, 360, 624, 1248* or 2496* contact positions.
- Variety of contacts:
 - Crimp
 - Square Post
 - Wrap Post
 - Buss
 - PC/RC
- Metal or plastic housing.
- Wide range of accessories.
- Easy actuation by screwdriver, socket wrench (DL1/2/3 only), allen wrench or actuating handle (see accessories page 47).

The long life and rapid mating are achieved through the use of our Zero Insertion Force design. Contacts in the plug and receptacle do not touch each other while the connector halves are being engaged.

Zero Insertion Force Camming Instructions

It's as easy as 1, 2, 3...

- Step 1.** The plug is placed over the receptacle.
Step 2. A "quarter turn" of an actuating shaft mates all the contacts at once.
Step 3. The "same quarter" turn also physically locks the connector halves together.

Connector engagement force is zero, and the only wear on the contacts occurs as they are pressed together and lightly wiped past each other during the camming and locking operation.

* Contact Cannon for details.

This is our "DL/DLM" series of connectors.

Step 1. Simply place it together.

Contacts aligned.

Step 2. Turn the cam a quarter turn.

Contacts engaged.

Step 3. It's locked and mated.

Contacts are mated.

DL/DLM/DLD Applications

Medical

- Ultrasound Diagnostic
- Patient Monitoring
- Hospital Equipment

Test & Instrumentation

- Avionics
- Automated Test Equipment
- Computer & Peripheral Equipment
- Semiconductor

Commercial/Industrial Manufacturing

- Automation
- Robotics
- Electrical Controls

Entertainment

- Recording Studio Equipment
- Stage Lighting & Sound
- Broadcasting Equipment

Telecommunication

- Systems Interconnect
- Manufacturing Test Equipment
- Switching Systems

Transportation

- Locomotive Systems
- Automotive Electronics
- Aircraft Simulators

Signal and Power Distribution Cable Harness

For your complete cable harnessing resource, contact Cannon for details.

Contact Termination	PC Tails, Straight Crimp Square Post Wrap Post Buss

DL/DLM/DLD Temperature/Current Rating

The ambient temperature curves shown represent the rated current carrying capacity of the Cannon DL1/2/3/4, DLM1/2/3 and DLD1/2 electrical connectors, derated to 80% of the values recorded using the methods specified by International Electro-Technical Commission Document 48 (1975).

Current was applied to the total connector (all contacts) in one-half ampere increments and maintained at each current level until thermal stability was achieved. A thermocouple inserted into the "hottest area" of each connector then measured the connector temperature at the same time that an ambient temperature reading was taken. The difference between the two measured values is the heat rise or self-heating created solely by the current flow, and this temperature rise for the current level was deducted from the insulator material rated temperature. These values were then derated to 80% to obtain the curves shown.

How to Identify the Ideal DL Product for Your Application

- Q. What type of actuation does the application require?
- A. Manual (turn handle cam) – DL / DLM series.
Blind mating (self cam) – DLD drawer series.
- Q. Does the application require plastic housing?
- A. DL / DLD series.
- Q. Does the application require metal housing?
- A. DLM series (for EMI / RFI shielding).
DL4 series.
- Q. Does this application involve low currents?
- A. For 100 milliamps or less use 50 μ inch gold contacts (Flat contacts on Receptacle, and Bump contacts on Plug), see pages 52-53.
- Q. Does this application involve standard currents of more than 100 milliamps?
- A. For more than 100 milliamps, use 20 μ inch gold contacts (Hermaphroditic Bump contact), see pages 52-53.
- Q. Does this application involve higher than 5 amps?
- A. For higher than 5 amps use Buss contacts, see page 51.
- Q. What type of contact is required for this application?
- A. Select the appropriate part number for the Plug and Receptacle based on the number and type of contacts needed for this application, see pages 12-13.
- Q. Does the application require crimp contacts?
- A. Order appropriate crimp contacts for the wire size used in this application, see pages 50-53.
- 50 μ inch Gold (low current to 5 A applications) – Most Versatile
 - 20 μ inch Gold (standard application)
 - Buss contacts (high amps-greater than 5 A)
- Q. Does the application require crimp tooling, with low or high volume?
- A. For low volume of crimps:
Order loose contacts and order the appropriate hand tool, see page 55.
For high volume of crimps (50,000 per year or more):
Order reeled contacts, see page 53, and contact Cannon's Customer-Use-Tooling to lease an automatic crimp machine, see page 59.
- Q. Is an actuating handle needed?
- A. Actuating handles are ordered separately (except DL4 Series), see page 47.
- Q. Does the application require fool-proof mating?
- A. Order the polarizing posts to protect from erroneous mating, see page 48.
- Q. How do I protect the wiring / cabling?
- A. Two Options:
- Plastic Junction Shell with optional second entry cable clamp kit, see page 46.
 - Metal Backshell available, see pages 44-45.
- Q. When the DL5-260 series application requires EMI / RFI shielding?
- A. Order the EMI / RFI metal shielding shells or utilize the new DLM5 series without shield shell, see page 49.
- Q. Does the customer need to protect the contacts when connector is not mated?
- A. Order the appropriate protective cover, see page 47.

Accessories

Cannon offers a wide selection of accessories that allow the design engineers to configure the product for their exacting needs. The accessories range from the simple actuating handle to junction and backshells, as well as polarizing posts and protective covers for the contacts.

Actuating handles are the same for the DL1/2/3 and DLM1/2/3 series. The DL5/DLM5 and DLM6 series have specific handles. Handles are sold separately since many applications require the connector to be attached or removed only by an authorized technician.

Plastic junction shells are available for the DL1/2/3 series for encasement of the crimp contacts after complete installation into the connector. These shells also make it possible for the DL to be used as a cable-to-cable mating connector as they can be used both on the plug and the receptacle. The DL1/2/3 plastic junction shells have optional secondary cable entry capability by removing the molded in cable entry plugs. Cable clamp kits are available to affix the cable to the second entry. This second entry option is very useful in applications where the large wire sizes make the cable diameter too large to be handled from a single entry port.

Metal Backshells are available for the entire DL/DLM series. The metal backshells are constructed from die cast aluminum with a nickel plating to facilitate in EMI/RFI shielding of the connector system. Shielding has become a driving force because of ever increasing stringent EMI/RFI regulations.

Polarizing posts are available to offer a keying feature for both the DL and DLM connectors. The polarizing posts can be installed in specific orientation so that plugs of the same size connectors can only be mated in predetermined receptacles. This feature offers the designer the ability to fool-proof the attachment possibilities to protect accidental damage to the system.

Protective covers of plastic and anti-static rubber are available to offer contact protection from physical damage or dust. Since the DL series has a high density of contacts in an exposed area, these covers are very useful for many applications. For example: where systems have multiple connectors; when the connections are often left unattached; or when the system parts are put into storage.

Metal Backshell

DL1, DLM1

- DL1, DLM1 is a two piece shell design.
- Kit consists of 2 shells, 10 screws, 1 wire hood, 1 wire clamp, 1 lock/open indication seal.

Materials and Finishes

Shell:	Nickel over die cast aluminum
Hardware:	Stainless Steel

Used On	Part Number	Mounting	Max Cable Entry
DL1, DLM1	249-4516-000	Straight or 90°	19,05 (.750)

DL2, DLM2

- DL2, DLM2 is a two piece shell design.
- Kit consists of 2 shells, 9 screws, 1 wire hood, 1 wire clamp, 1 lock/open indication seal.

Materials and Finishes

Shell:	Nickel over die cast aluminum
Hardware:	Stainless Steel

Used On	Part Number	Mounting	Max Cable Entry
DL2, DLM2	249-4517-000	Straight or 90°	19,05 (.750)

DL3, DLM3

- DL3, DLM3 is a two piece shell design.
- Kit consists of 2 shells, 9 screws, 1 wire hood, 1 wire clamp, 1 lock/open indication seal.

Materials and Finishes

Shell:	Nickel over die cast aluminum
Hardware:	Stainless Steel

Used On	Part Number	Mounting	Max Cable Entry
DL3, DLM3	249-4518-000	Straight or 90°	19,05 (.750)

Accessories

Metal Backshell

DL5, DLM5

- DL5, DLM5 is a one piece shell design.
- Kit consists of 1 shell, 8 screws, 1 wire hood, 1 wire clamp, 4 nuts.

Materials and Finishes

Shell:	Nickel over die cast aluminum
Hardware:	Stainless Steel

Used On	Part Number	Mounting	Max Cable Entry
DL5, DLM5	249-4501-000	Straight or 90°	22,23 (.875)

DLM6

- DLM6 is a one piece shell design.
- Kit consists of 1 shell, 8 screws, 1 wire hood, 1 wire clamp, 4 nuts.

Materials and Finishes

Shell:	Nickel over die cast aluminum
Hardware:	Stainless Steel

Used On	Part Number	Mounting	Max Cable Entry

Polarizing Posts

Corner Mounting* for DL1/2/3, DLM6

Kit Number: 320-0021-006

- Kit contains 2 posts and 2 No. 4-40x9/32 pan head screws.
- Order 1 kit per connector.

Description	Material	Finish/Treatment
Post	Zinc	Yellow chromate over cadmium
Screw	Stainless Steel	Passivated

* Corner mounting polarization is accomplished by replacing the nut with polarizing posts.

Corner Mounting* for DL5, DLM5

Kit Number: 320-4502-000

- Kit contains 4 posts and 4 M3x8 screws.
- Order 1 kit per connector.

Description	Material	Finish/Treatment
Post	Zinc	Nickel
Screw	Stainless Steel	Passivated

* Corner mounting polarization is accomplished by replacing the nut with polarizing posts.

Center Mounting for DL1/2, DLM1/2

Kit Number: 320-0021-005

- Kit contains 2 posts and 2 No. 2-56x3/16 fil. head screws.
- Order 1 kit per connector.

Description	Material	Finish/Treatment
Post	Zinc	Clear chromate over cadmium
Screw	Steel	Clear chromate over cadmium

Corner Mounting* for DLM1/2/3

Kit Number: 320-4505-000

- Kit contains 4 posts and 4 M2.5x12 screws.
- Order 1 kit per connector.
- For metal backshells.

Description	Material	Finish/Treatment
Post	Zinc	Nickel
Screw	Stainless Steel	Passivated

* Corner mounting polarization is accomplished by replacing the nut with polarizing posts.

Recommended Key Nomenclature

- Polarizing posts are a customer installed option.
- Recommended key nomenclature can be used for simple, opposite corner polarization.
- It is recommended that customers use their own configuration drawings.

Example:
DL1-156RW4B32C describes a Size 1 receptacle connector with 156 front insertable/removable square post 50µ in. gold contacts with polarization position 3 at location A and position 2 at location B. (C ⇒ corner polarization). Receptacle DL1-156RW4B32C would mate with plug DL1-156PW4A32C

Description	Part Number	Material	Finish
Receptacle Shell	248-4501-000	Steel	Nickel

Accessories

Contacts

The Cannon DL Crimp and Buss contacts are available in addition to the factory installed Square Post/PCB mount version contacts. Crimp contacts are available loose or reeled, where as Buss contacts are available loose only.

The **Buss contacts** make the DL series capable of providing higher than 5 amps per line. The Buss contacts are pairs of contact lines which increase the amperage capability in increments of 10 amps up to 60 amps. The contacts have solder holes at the tail section for soldering #30-#18 AWG. The tail is also designed to accommodate a 1/8" crimp lug for wire sizes larger than #18.

The **Crimp contacts** are available in two plating types. The 20μ inch gold hermaphroditic version which is the economical choice for applications requiring over 100 milliamps to 5 amps. And the **50μ inch gold BUMP to FLAT** version which offers the most versatile range of application requirements from micro-amps to 5 amps.

The **BUMP to FLAT** version was developed specifically to handle "dry circuit" requirements where the signal amperage is not enough to ensure a clean contact point. The **50μ inch gold BUMP to FLAT** version is mandatory for applications with signals below 100 milliamps. The Bump contact is installed in the Plug and the Flat contact is installed in the Receptacle. This combination increases the contact force and

ensures that the wiping point becomes the current carrying point after mating. The **50μ inch gold BUMP to FLAT** version has become the standard for all modern applications where power and low voltage signals are combined into one connector.

Materials and Finishes

Description	Material	Finish
Crimp Contact*	Copper Alloy	Gold over nickel or Selective gold/tin lead over nickel
Buss Contact	Copper Alloy	Gold over nickel

*Order crimp contacts separately. See pages 52-53.

Buss Contacts

6 Pair/3Pair/1 Pair

- Designed for power distribution of more than 5 amps.
- Accommodates #30-#18 AWG in hole \varnothing 1,29-1,14 (.051-.045) for wire soldering.
- Accommodates 1/8" crimp lugs for larger wire sizes.

Material: Copper Alloy

Finish: 20 μ inch in mating area/
gold flash on balance (terminating end)

Crimp Contacts — Reeled

Reeled

50µ inch gold contacts:

- Recommended for all applications.
- Offer the broadest amperage range.
- Mandatory for low current applications (less than 100 milliamps).

Material: Copper Alloy
 Finish: Gold over nickel
 Extraction Tool: 274-7029-007
 Insertion Tool: None Required

Note: Automatic tooling is recommended for volume over 50K per year, see page 59.

Plug (Bump)

Receptacle (Flat)

Wire Accommodation	Plug 50µInch Gold Bump ●	Receptacle 50µInch Gold Flat ●	Plug and Receptacle 20µInch Gold	Hand Tool (Page 55)

Note: For more information on tools and assembly, see pages 54-59.

- ◆ Non Insulation Support
- For low current applications (less than 100 milliamps) use 50µ inch gold (bump) contact on plug side and 50µ inch gold (flat) contact on receptacle side.
- ▲ Contact Factory for tool.
- * Finish: 20µ inch gold in mating area/Gold flash on balance (terminating end).
- Finish: 20µ inch gold in mating area/Tin lead on balance (terminating end).

Tooling

A key feature of the Cannon DL connector series is easy contact termination, both in the field and in high-volume production. An ergonomically designed hand crimp tool is available for the low volume (loose contact) applications and will accommodate two different crimp contact sizes. To reduce overall costs, the crimp jaws are replaceable.

Automatic crimp and strip/crimp machines are available for high volume applications requiring a large number of crimps (50,000 crimps per year or more). These machines are leased to customers to eliminate the need for heavy investment. They also improve productivity for large pin count applications.

DL Crimp contacts are designed to be hand installed into the connector, no tooling is needed for the insertion process. Extraction tools are available for the removal of Crimp contacts for easy repair even in field applications. Extraction tools are also available for the Buss contacts, as well as the factory installed Square Post contacts.

Extraction Tool — Buss Contacts

Crimp Tensile Strength

Crimp tensile strength is a measure of how hard a wire can be pulled without breaking or separating from the contact. This is the best way to verify that the wire is properly terminated to the contact. Periodic crimp tensile measurements are recommended to insure the integrity of the crimp. The table below contains the appropriate values for DL crimp contacts.

Wire Trim Dimension

Wire Size (AWG)	32	30	28	26	24	22	20	18
Tensile Min. (lbs)	1	1.5	3	7	10	15	19	30
Wire Trim Dimension "A"	3,30 (.130)	3,30 (.130)	3,30 (.130)	3,30 (.130)	3,30 (.130)	3,30 (.130)	4,06 (.160)	4,06 (.160)

Assembly Instructions for Crimp Contacts

Contact Insertion:

All crimp contacts are inserted by hand. No tooling is required for either the plug or receptacle.

Caution: Do not force contacts into contact cavities. If contact encounters excessive resistance during installation remove and re-insert using a slight up and down motion. This will assure positive cavity alignment. *Do not* install contact if plug is in the *closed* or actuated position.

Plug:

Step 1. Prior to inserting contacts, turn the shaft counter-clockwise to its maximum *open* position.

Step 2. With the retention lance positioned *away* from the shaft, insert contacts from the rear of the plug.

Receptacle:

Step 1. With the retention lance positioned *toward* the shaft hole, insert contacts from the rear of the receptacle.

Contact Removal for Crimp Contacts

Tool: CET-DL10

Release retention lance by inserting tip of extraction tool into cavity until it bottoms on insulator shoulder. Gently pull wire in direction of arrow, see illustration, to remove contact from insulator.

Assembly Instructions for Buss Contacts

Contact Insertion:

All buss contacts are inserted by hand. No tooling is required for either the plug or receptacle.

Caution: Do not force contacts into contact cavities. If contact encounters excessive resistance during installation remove and re-insert using a slight up and down motion. This will assure positive cavity alignment. *Do not* install contact if plug is in the *closed* or actuated position.

Plug:

Step 1. Prior to inserting contacts, turn the shaft counter-clockwise to its maximum *open* position.

Step 2. With the retention lance positioned *away* from the shaft, insert contacts from the rear of the plug.

Receptacle:

Step 1. With the retention lance positioned *toward* the shaft hole, insert contacts from the rear of the receptacle.

Contact Removal for Buss Contacts

Tool: CET-DL3/4/5/6

Release retention lance by inserting tip of extraction tool into cavity until it bottoms on insulator shoulder. Gently remove buss contact in direction of arrow, see illustration, to remove contact from insulator.

Assembly Instructions for Square Post Contacts

Contact Insertion:

Square Post Contacts are factory installed but can be removed and replaced if damaged in service.

Step 1. Prior to inserting contacts, actuating handle must be in the maximum *open* position. Actuating handle will be facing toward connector front face, see Figure 1.

Step 2. Contacts are inserted from the insulator front face by hand and are seated and clicked in the cavity by pulling on the terminal post with flat nose pliers, see Figure 2.

Figure 1

Figure 2

Contact Removal for Square Post Contacts

Tool: CET-ECP and CET-ECP-1

Place tool over square post terminal and impact tool. Apply sufficient force to collapse retention lance and push contact out of insulator. This process destroys the retention lance.

Lease Automatic Tooling — North America*

ABT-607 Pneumatic Crimper

The ABT-607 is a pneumatic powered and controlled machine. It is designed for customers with moderate volume. This machine is designed to semi-automatically crimp stamped and formed contacts onto pre-stripped stranded or single conductor electrical wire. This machine will accommodate size 34 thru 12 AWG wire and is actuated by the use of a foot pedal.

Machine Crimp Rate:
800 per hour

Power Requirements:
Pneumatic = 100 psi, 2 cu. ft. per min.

ABT-500 UCCD

The ABT-500 Universal Cannon Crimp Die, is a flywheel driven, electronically controlled machine that is designed to semi-automatically crimp stamped and formed contacts on stranded or single conductor, pre-stripped wire. This machine will accommodate size 34 thru 12 AWG wire. The primary application of this machine is for terminating discrete, pre-stripped, wire. The machine is actuated by the use of a foot pedal.

Machine Crimp Rate:
1300 per hour

Power Requirements:
Electrical = 115 VAC, 60 Hz, 20A

ABT-620 UCCS

The ABT-620 Universal Cannon Crimper/Stripper is a pneumatic powered, microprocessor controlled machine. It is designed to semi-automatically strip insulation from stranded or single conductor electrical wire and attach a stamped and formed contact by crimping. The machine will accommodate 34 thru 12 AWG wire. Primary application of the machine is the termination of jacketed cable where the individual leads cannot be stripped by fully automated equipment. The ABT-620 UCCS operates automatically upon insertion of a wire or it can be switched over to foot pedal operation as desired.

Machine Strip/Crimp Rate:
1200+ per hour

Power Requirements:
Electrical = 115 VAC, 60 Hz, 20A
Pneumatic = 80 psi, 3 cu. ft. per min.

* For other geographical regions, contact Cannon for details.

PCB Pad Layout

For the PC/RC Versions; The contact tail design has been modified from a 0,64 (.025) square pin to a 0,05 (.020) diameter round pin. The change enables a decrease in the diameter of the through-holes as well as the solder mounds on PCB's (d1,

and d2 can be wider than D1 and D2). This can reduce the crosstalk in RF circuits and enhance the dielectric withstanding voltage in high voltage circuits.

Dimensions	
D1	1,14 (.045)
D2	0,47 (.018)
d1	1,44 (.057)
d2	0,62 (.024)

PCB Pad Layout

The soldering of contacts into through (THRU) holes on a PC Board has become standard for medical equipment and test equipment for semi-conductors. As a result of the narrow spacing between the solder pad and circuit pattern, crosstalk between signals increases. A solution to this problem is to make the diameter of the contacts and solder lands smaller to provide more space between the lands and the patterns.

However, a smaller diameter contact results in higher impedance.

Cannon designed a solution with a smaller diameter contact tail. This design application allows the use of a smaller through-hole diameter.

Contacts mated.

Glossary of Terms

In every job speciality there are certain words and phrases used by the "insiders" which after a time become almost a language unique to that speciality. DL Zero Insertion Force (ZIF) technology is a typical example of that condition.

This page provides some explanations, in an attempt to clarify some of the terms that are commonly used by engineers and sales staff at Cannon.

The list is not comprehensive, but highlights many of the expressions commonly used. Should you have any comments or additions please contact us. Feedback will be appreciated.

AWG — American Wire Gauge. A standard for wire diameters based on the approximate circular mil area of the wire. As numbers get larger, wire diameters decrease in size (a size 16 AWG wire has a larger diameter than a size 22 AWG).

Beryllium Copper — An alloy of copper used to make contacts. It is relatively expensive, but has superior spring qualities, is resistant to fatigue, and can operate at higher temperatures than other materials such as phosphor bronze. It is used when numerous insertion and extraction cycles are required.

Cable Clamp — A rear connector clamping accessory which tightens over a cable or wire bundle to provide strain relief to the cable. The cable clamp may be part of a more elaborate endbell or it may be used alone.

Contact Retention — The maximum allowable axial load which can be applied to a contact from either direction without it being dislodged from the insulator. Usually stated in Newtons or pounds of force.

Contact Spacing — The distance between the centers of adjacent contacts.

Crimp — A method of attaching a contact to a wire through the application of pressure.

Crimp Contact — A contact which is terminated to a wire by means of crimping with an appropriate die and tool. After termination, an insertion tool is normally used to insert the crimped contact into the connector. Removable crimp contacts can be FRONT RELEASE or REAR RELEASE. An extraction tool is usually required to remove the contact.

Cross Talk — Undesired electrical currents in conductors caused by electromagnetic or electrostatic coupling from other conductors or from external sources. Also, leakage of optical power from one optical conductor to another.

Derating — To reduce the voltage, current, or power rating of a connector to improve its reliability or to permit operation at high ambient temperatures or altitudes.

Derating Curve — A graph of the change in power handling capability of a connector as a function of ambient temperature or altitude. Typically the graphed function is curved, hence the name.

EMI/RFI — Electro-Magnetic Interference and Radio Frequency Interference. This is unwanted stray electronic radiation which may enter, and/or be emitted by an electronic system. The most common method of shielding interconnections against this radiation is to use wires with a metallic braided shield and a connector system which will extend the shield through the interconnection. This type of design will keep radiation from entering, or being emitted by the system. Endbells for shielded cable and connectors with threads or grounding fingers are typically used for this purpose. Call for the specific EMI/RFI accommodations of the connectors in this catalog.

Extraction Tool — A device used to remove a (removable) contact from a connector insulator. The extraction tool may be inserted into the mating face of the insulator (FRONT RELEASE) or the wire side (REAR RELEASE). In either case, the contact comes out the rear, or wire side, of the connector.

Flash Plating — As commonly used in connector terminology, flash refers to extremely thin platings of metal, for example: gold flash is a very thin plating of gold. So thin, that the thickness is generally not specified.

Insertion Tool — A small, handheld tool used to insert contacts into a connector.

Mating Life — The minimum number of times a connector can be mated and unmated and still meet all of its design specifications. The maximum life may be much higher than this figure.

Operating Temperature — The range of AMBIENT TEMPERATURES over which the connector can operate and still meet all of its design specifications.

PC Contact — A pin or socket contact that has a post opposite the mating end which is intended to be soldered directly to a printed circuit (PC) board instead of being terminated to a wire. The solder post may come in square post and or round pin configurations.

Polarization — A mechanism that allows connector halves to intermate in only one specific orientation. This can be accomplished by asymmetrical shapes of the two halves as in a

D Subminiature connector, insulator rotation, keys, keyways, ramps, or other means. Polarization prevents connectors of the same size and/or same layout from intermating when this is undesirable, such as when two otherwise identical connectors are used on the same panel. Polarization is typically done by the assembler and cannot be changed by the user, while keying is typically done by the user with an auxiliary keying device.

Removable Contact — A contact which can be inserted and removed from the insulator by the user. An insertion tool and extraction tool are normally required to insert and remove the contact.

Selective Plating — The application of metal PLATING to selective areas of the contact, particularly those areas subject to wear. Precious metal platings may be applied selectively to those contact surfaces responsible for the electrical connection, reducing the contact cost without sacrificing electrical performance.

Thermoplastic — A plastic material that can be softened by heat and rehardened into a solid state by cooling. This process can be accomplished using a variety of techniques.

UL — Abbreviation for Underwriter's Laboratories, a corporation supported by a group of underwriters for the purpose of establishing safety standards covering certain types of equipment and components in the United States.

UL 94V-0 — A flammability performance rating set by Underwriter's Laboratories for plastics.

Wire Size — The numerical designation for conductor diameter. This catalog uses American Wire Gauge (AWG) which is based on the approximate circular mil area of the wire. Also see AWG.

Wrap Post Contact — A type of contact which is terminated by wrapping wire around a post in a manner that deforms the wire and creates a gas-tight connection between the wire and the post. This method is slow and labor intensive. If used at all, it is used in prototype work.

Zero Insertion Force Connector (ZIF) — A connector designed in such a way that the contacts do not mechanically touch until the two connector halves have been jointed and a compression mechanism has joined the contacts together. A ZIF connector has extremely low insertion and removal forces making it possible to easily mate very large numbers of contacts with virtually no wear.

THIS NOTE MUST BE READ IN CONJUNCTION WITH THE PRODUCT DATA SHEET/CATALOG. FAILURE TO OBSERVE THE ADVICE IN THIS INFORMATION SHEET AND THE OPERATING CONDITIONS SPECIFIED IN THE PRODUCT DATA SHEET/CATALOG COULD RESULT IN HAZARDOUS SITUATIONS.

1 MATERIAL CONTENT AND PHYSICAL FORM

Electrical connectors do not usually contain hazardous materials. They contain conducting and non-conducting materials and can be divided into two groups.

- a) Printed circuit types and low cost audio types which employ all plastic insulators and casings.
- b) Rugged, Fire Barrier and High Reliability types with metal casings and either natural rubber, synthetic rubber, plastic or glass insulating materials. Contact materials vary with type of connector and also application and are usually manufactured from either: Copper, copper alloys, nickel, alumel, chromel or steel. In special applications, other alloys may be specified.

2 FIRE CHARACTERISTICS AND ELECTRIC SHOCK HAZARD

There is no fire hazard when the connector is correctly wired and used within the specified parameters. Incorrect wiring or assembly of the connector or careless use of metal tools or conductive fluids, or transit damage to any of the component parts may cause electric shock or burns. Live circuits must not be broken by separating mated connectors as this may cause arcing, ionisation and burning. Heat dissipation is greater at maximum resistance in a circuit. Hot spots may occur when resistance is raised locally by damage, e.g. cracked or deformed contacts, broken strands of wire. Local overheating may also result from the use of the incorrect application tools or from poor quality soldering or slack screw terminals. Overheating may occur if the ratings in the product Data Sheet/Catalog are exceeded and can cause breakdown of insulation and hence electric shock.

If heating is allowed to continue it intensifies by further increasing the local resistance through loss of temper of spring contacts, formation of oxide film on contacts and wires and leakage currents through carbonisation of insulation and tracking paths. Fire can then result in the presence of combustible materials and this may release noxious fumes. Overheating may not be visually apparent. Burns may result from touching overheated components.

3 HANDLING

Care must be taken to avoid damage to any component parts of electrical connectors during installation and use. Although there are normally no sharp edges, care must be taken when handling certain components to avoid injury to fingers.

Electrical connectors may be damaged in transit to the customers, and damage may result in creation of hazards. Products should therefore be examined prior to installation/use and rejected if found to be damaged.

4 DISPOSAL

Incineration of certain materials may release noxious or even toxic fumes.

5 APPLICATION

Connectors with exposed contacts should not be selected for use on the current supply side of an electrical circuit, because an electric shock could result from touching exposed contacts on an unmated connector. Voltages in excess of 30 V ac or 42.5 V dc are potentially hazardous and care should be taken to ensure that such voltages cannot be transmitted in any way to exposed metal parts of the connector body. The connector and wiring should be checked, before making live, to have no damage to metal parts or insulators, no solder blobs, loose strands, conducting lubricants, swarf, or any other undesired conducting particles. Circuit resistance and continuity check should be made to make certain that there are no high resistance joints or spurious conducting paths. Always use the correct application tools as specified in the Data Sheet/Catalog.

Do not permit untrained personnel to wire, assemble or tamper with connectors. For operation voltage please see appropriate national regulations.

IMPORTANT GENERAL INFORMATION

(i) Air and creepage paths/Operating voltage

The admissible operating voltages depend on the individual applications and the valid national and other applicable safety regulations.

For this reason the air and creepage path data are only reference values. Observe reduction of air and creepage paths due to PC board and/or harnessing.

(ii) Temperature

All information given are temperature limits. The operation temperature depends on the individual application.

(iii) Other important information

ITT Cannon continuously endeavors to improve their products. Therefore, ITT Cannon products may deviate from the description, technical data and shape as shown in this catalog and data sheets.

ITT Cannon manufactures the highest quality products available in the marketplace; however these products are intended to be used in accordance with the specifications in this publication. Any use or application that deviates from the stated operating specifications is not recommended and may be unsafe. No information and data contained in this publication shall be construed to create any liability on the part of ITT Cannon. Any new issue of this publication shall automatically invalidate and supersede any and all previous issues. **A limited warranty applies to ITT Cannon products. Except for obligations assumed by ITT Cannon under this warranty, ITT Cannon shall not be liable for any loss, damage, cost of repairs, incidental or consequential damages of any kind, whether or not based on express or implied warranty, contract, negligence or strict liability arising in connection with the design, manufacture, sale, use or repair of the products.** Product availability, prices and delivery dates are exclusively subject to our respective order confirmation form; the same applies to orders based on development samples delivered. This publication is not to be construed as an offer. It is intended merely as an invitation to make an offer. By this publication, ITT Cannon does not assume responsibility or any liability for any patent infringements or other rights of third parties which may result from its use. Reprinting this publication is generally permitted, indicating the source. However, ITT Cannon's prior consent must be obtained in all cases.

Cannon

ITT Industries
Engineered for life

We're Part of Your World in Interconnect Technology

- ▶ Innovation
- ▶ Experience
- ▶ Reliability
- ▶ Responsiveness

Don't blink.

No industry in the world moves faster than electronics. Take a snapshot of it today, and it all changes by tomorrow.

When you need to bring your products to market more quickly, you most likely seek a partner who moves just as fast as you do. A company at the forefront with the latest ideas in products and service.

At ITT Industries' Cannon Division, we have made it our business to understand your world. Or should we say, the many parts of your world:

- The places in the world where you do business.
- The products you bring to the world.
- The service you require from suppliers to compete in the world.

At Cannon, we are proud of a heritage that helped pioneer the electronics industry from its infancy in the early part of the twentieth century, to the highly advanced technologies of the present.

Today, we serve nearly every industry in which the increased demand for reliable and innovative interconnect systems is critical: from Computers (Personal computers, portables and peripherals) to Military/Aerospace (Commercial and military aircraft, defense and space).

INNOVATION

A commitment to concurrent engineering to help you reach your markets faster

Let us bring our spirit of innovation to your world. Experienced engineering teams located throughout the globe work hand-in-hand with our customers. And since these teams are thoroughly networked together, you benefit from 24 hour-a-day concurrent engineering capability. These teams advance your project from initial product concepts to final design and into production.

EXPERIENCE

Worldwide capacity to meet all of your delivery requirements

Our decades of manufacturing experience, help us bring the latest products to your world. With automated manufacturing capacity strategically located in North America, Europe and Asia, we can produce products in either large or small quantities to quickly meet your exact requirements.

RELIABILITY

We don't stop at "world class quality" — Continuous improvement is our standard

Our goal is to bring world class electronics to your world. This commitment to perfection has helped Cannon's global facilities earn ISO 9000 certification.

Cannon has also met or exceeded the quality system requirements from all customers who have conducted audits. We participate in ship-to-stock programs with many of these customers worldwide and have received numerous quality and preferred supplier awards from customers throughout the world in each of the industries we serve.

RESPONSIVENESS

A singular focus on responding to your needs

We know that to be responsive, we must know your world inside and out: your particular company, your industry and your challenges. Each of Cannon's thousands of employees worldwide is focused on responding to you with timely and dependable information — and on ensuring that we keep the commitments we make.

AN INVITATION TO SHARE OUR WORLD

Innovation. Experience. Reliability. Responsiveness.

At Cannon, these are the strengths that we bring to our customers each and every day. Just as we have for nearly nine decades. We pride ourselves on a level of service and manufacturing know-how that has enabled us to lead our industry. Exceeding your expectations — not just meeting them — is how we approach every project.

With the world moving faster all the time, Cannon is a partner who can help you get your products to market not just on time, but ahead of the competition.

At Cannon, we realize that each customer we serve has their own special needs and expectations. That is why we would welcome the opportunity to discuss your project, your company, your industry — yes, your world.

New Product: The DLMI/2/3 range of ZIF connectors offer EMI/RFI shielding without the use of shielding skirts. Metal body versions are directly inter-mateable with the plastic DL. The metal versions also offer added strength for applications where the plastic versions can be damaged. See pages 16-18, 23-25, 30-32, and 37-42.
