

QLS30 Series – 30A Quarter-Brick DC/DC Converter
48V Input
1.8V, 1.5V, 1.2V Output

Data Sheet

Features

- Cost-effective single board design
- Low profile – 11 mm height
- Input/output isolation: 1500VDC, basic insulation
- High efficiency
- Output back-drive protection
- Start-up into high capacitive load
- Low conducted and radiated EMI
- Output overcurrent protection
- Output overvoltage protection
- Overtemperature protection
- Remote sense
- Set point accuracy $\pm 1\%$
- Remote on/off (primary referenced), positive or negative logic
- Output voltage trim adjust, positive or negative
- UL 1950 Recognition, CSA 22.2 No. 950-95 certification, TUV IEC950

Applications

- Distributed power architectures
- Telecommunications equipment
- LAN/WAN applications
- Data processing applications

Description

The new QLS30 series of single-output DC/DC converters features single board, multi-layer construction and an SMT design that is highly reliable due to the low component count and minimal manufacturing touch time. The QLS30 series uses fewer components than any other equivalently rated single board converter. The converters can deliver a maximum of 30 Amps with a typical efficiency of 85%. The QLS provides superior thermal performance, with minimal derating. The QLS30ZB model converter can deliver 22.8 amperes at 1.8 volt output in ambient conditions of 65°C and 200 LFM. This full featured, low profile converter offers input undervoltage lockout, overload, overvoltage and overtemperature protection. Interface features include remote on/off, remote sense and output voltage trim.

Selection Chart						
Model	Input voltage VDC	Input current, max ADC	Output voltage Vout, VDC	Output rated current I _{rated} , ADC	Output Ripple/Noise, mV p-p	Typical Efficiency @ I _{rated} , %
QLS30ZB	36-75	1.5	1.8	30	100	86
QLS30ZA	36-75	1.3	1.5	30	100	85
QLS30ZY	36-75	1.1	1.2	30	100	84
This product is intended for integration into end-use equipment. All the required procedures for CE marking of end-use equipment should be followed.

48V Input
1.8V, 1.5V, 1.2V Output

Data Sheet

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings may cause performance degradation, adversely effect long-term reliability and cause permanent damage to the converter.

Parameter	Conditions/Description	Min	Max	Units
Input voltage	Continuous		75	VDC
	Transient, 100mS		100	VDC
Operating Temperature	At 100% load	-40	100	°C
Storage Temperature		-40	125	°C
ON/OFF Control Voltage	Referenced to -Vin		50	VDC

Environmental and Mechanical Specifications

All specifications apply over specified input voltage, output load and temperature range, unless otherwise noted.

Parameter	Conditions/Description	Min	Nom	Max	Units
Shock	Halfsine wave, 3 axes	50			g
Sinusoidal Vibration	GR-63-Core, Section 5.A.2	1			
Weight			1.2/35		Oz/g
Water Washing	Standard process		Yes		
MTBF	Per Bellcore TR-NWT-000332		1,980		kHrs

Isolation Specifications

All specifications apply over specified input voltage, output load and temperature range, unless otherwise noted.

Parameter	Conditions/Description	Min	Nom	Max	Units
Insulation Safety Rating		Basic			
Isolation Voltage		1500			VDC
Isolation Resistance		10			MOhm
Isolation Capacitance			1800		pF

Input Specifications

All specifications apply over specified input voltage, output load and temperature range, unless otherwise noted.

Parameter	Conditions/Description	Min	Nom	Max	Units
Input Voltage	Continuous	36	48	75	VDC
Turn-On Input Voltage	Ramping Up		33		VDC
Turn-Off Input Voltage	Ramping Down		32		VDC
Turn-On Time	To Output Regulation Band 100% Resistive Load		5	10	mS
Input Reflected Ripple Current	Full Load, 12uH source inductance			50	mA p-p
Inrush Transient	Vin=Vin.max			0.1	A ² s

Typical Application

Figure 7 below shows the recommended connections for the QLS30 series converter.

Fig.7 Typical application of QLS30 series

The QLS30 series converters do not require any external components for proper operation. However, if the distribution of the input voltage to the converter contains significant inductance, the capacitor C1 may be required to enhance performance of the converter. A minimum of a 33 μ F electrolytic capacitor with the ESR<0.7 Ω is recommended for the QLS30 series.

Refer to the “Inrush Current Control Application Note” on www.power-one.com for suggestions on how to limit the magnitude of the inrush current.

For output decoupling we recommend to use a 10 μ F tantalum and a 1 μ F ceramic capacitors connected directly across the output pins of the converter. Note that the capacitors do not substitute the filtering required by the load.

Shutdown Feature Description

The ON/OFF pin in the QLS30 series converters functions as a normal soft shutdown. It is referenced to the -Vin pin (see Figure 7). With positive logic, when the ON/OFF pin is pulled low, the output is turned off and the unit goes into a very low input power mode.

With negative logic, when the ON/OFF pin is pulled low, the unit is turned on. An open collector switch is recommended to control the voltage between the ON/OFF pin and the -Vin pin of the converter. The ON/OFF pin is pulled up internally, so no external voltage source is required. The user should avoid connecting a

resistor between the ON/OFF pin and the +Vin pin.

When the ON/OFF pin is used to achieve remote control, the user must take care to insure that the pin reference for the control is really the -Vin pin. The control signal must not be referenced ahead of EMI filtering, or remotely from the unit. Optically coupling the information and locating the optical coupler directly at the module will solve any of these problems.

Note: If the ON/OFF pin is not used, it can be left floating (positive logic), or connected to the -Vin pin (negative logic).

Output Voltage Trim

The trim feature allows the user to adjust the output voltage from the nominal. This can be used to accommodate a different requirement or to do production margin testing. There are two variances available in the QLS30 series.

Negative Trim (No suffix)

The QLS30 negative trim units trim up with a resistor from the TRIM pin to the -Sense pin and trim down with a resistor from the TRIM pin to the +Sense pin, as shown in Fig.8.

The negative trim schematic is shown in Figure 8.

Fig.8 QLS30 series negative trim schematic

The general equation (1) for changing the output voltage on the negative trim modules is invariant, but the constants in the equation change due to different internal values.

QLS30 Series – 30A Quarter-Brick DC/DC Converter **48V Input** **1.8V, 1.5V, 1.2V Output**

Data Sheet

$$R_{TRIM} = \frac{A - B \times \Delta V}{\Delta V}, \quad k\Omega \quad (1)$$

where A and B are constants from the table below, and ΔV is the absolute value of the desired change in the output voltage in Volts.

Model	Trim up		Trim down	
	A	B	A	B
QLS30ZB	0.57	1	0.2711	1.4676
QLS30ZA	0.283	0.121	0.065	0.352
QLS30ZY	0.5928	3.01	0.5686	2.0422

Industrial Standard Positive Trim (suffix -T)

The -T option units trim up with a resistor from the TRIM pin to the +Sense pin and trim down with a resistor from the TRIM pin to the -Sense pin as shown in the Figure 9.

Fig.9 QLS30 series positive trim schematic

The equations below determine the trim resistor value required to achieve a ΔV change in the output voltage.

$$R_{UP} = 5.11 \left(\frac{V_{out}(100 + \Delta V\%)}{1.225\Delta V\%} - \frac{100 + 2\Delta V\%}{\Delta V\%} \right), k\Omega$$

$$R_{DOWN} = 5.11 \left(\frac{100}{\Delta V\%} - 2 \right), k\Omega$$

For QLS30ZY use the following equations.

$$R_{UP} = 5.11 \left(\frac{V_{out}(100 + \Delta V\%)}{1.225\Delta V\%} \right), k\Omega$$

$$R_{DOWN} = 5.11 \left(\frac{100}{2\Delta V\%} - \frac{1}{2} \right), k\Omega$$

where $\Delta V\%$ is the output voltage change expressed in percents of the nominal output voltage, V_{out} .

Notes:

1. When the output voltage is trimmed up, the output power from the converter must not exceed its maximum rating. The power is determined by measuring the output voltage on the output pins, and multiplying it by the output current.
2. In order to avoid creating apparent load regulation degradation, it is important that the trim resistors are connected directly to the remote sense pins, and not to the load or to traces going to the load.
3. The QLS30 series converters will trim down further than the 10% limit. In general, this is permissible. The user must confirm that the results are acceptable in the application.

Safety Considerations

The QLS30 series converters feature 1500 Volt DC isolation from input to output. The input to output resistance is greater than 10M Ω . These converters are provided with Basic insulation between input and output circuits according to all IEC60950 based standards. Nevertheless, if the system using the converter needs to receive safety agency approval, certain rules must be followed in the design of the system. In particular, all of the creepage and clearance requirements of the end-use safety requirements must be observed. These documents include UL60950, CSA60950-00 and EN60950, although other additional requirements may be needed for user's specific applications. The QLS30 series converters have no internal fuse. An external fuse must be provided to protect the system from catastrophic failure, as illustrated in Figure 7. The fuse with a rating of 4A or less is recommended. The user can select a lower rating fuse based upon the highest inrush transient at the maximum input voltage and the maximum input current of the converter at the minimum input voltage. Both input traces and the

QLS30 Series – 30A Quarter-Brick DC/DC Converter
48V Input
1.8V, 1.5V, 1.2V Output

Data Sheet

chassis ground trace (if applicable) must be capable of conducting a current of 1.5 times the value of the fuse without opening. The fuse must not be placed in the grounded input line, if any.

In order for the output of the QLS30 series converter to be considered as SELV (Safety Extra Low Voltage) or TNV-1, according to all IEC60950 based standards, one of the following requirements must be met in the system design:

- If the voltage source feeding the module is SELV or TNV-2, the output of the converter may be grounded or ungrounded.
- If the voltage source feeding the module is ELV, the output of the converter may be considered SELV only if the output is grounded per the requirements of the standard.
- If the voltage source feeding the module is a Hazardous Voltage Secondary Circuit, the voltage source feeding the module must be provided with at least Basic insulation between the source to the converter and any hazardous voltages. The entire system, including the QLS30 converter, must pass a dielectric withstand test for reinforced insulation. Design of this type of systems requires expert engineering and understanding of the overall safety requirements and should be performed by qualified personnel.

Thermal Considerations

The QLS30 series converters are designed for both natural and forced convection cooling. The maximum allowable output current of the converters is determined by meeting the derating criteria of all electronic components used in the power supplies. An example of the derating criteria for the semiconductor junction temperature is not to exceed 120°C to provide reliable long-term operation of the converters. Please contact Power-One for more derating criteria for other components. The graphs in Figures 10-12 show the maximum output current of the QLS30 series converters at different ambient temperatures under both natural and forced (longitudinal airflow direction, from pin 1 to pin 3) convection. As an example, from Figure

11, the QLS30ZA operating at 55°C can deliver up to 25A reliably with 100LFM forced air, while up to 29A reliably with 200LFM forced air.
