

# 100370

## Low Power Universal Demultiplexer/Decoder

### General Description

The 100370 universal demultiplexer/decoder functions as either a dual 1-of-4 decoder or as a single 1-of-8 decoder, depending on the signal applied to the Mode Control (M) input. In the dual mode, each half has a pair of active-LOW Enable ( $\bar{E}$ ) inputs. Pin assignments for the  $\bar{E}$  inputs are such that in the 1-of-8 mode they can easily be tied together in pairs to provide two active-LOW enables ( $\bar{E}_{1a}$  to  $\bar{E}_{1b}$ ,  $\bar{E}_{2a}$  to  $\bar{E}_{2b}$ ). Signals applied to auxiliary inputs  $H_a$ ,  $H_b$  and  $H_c$  determine whether the outputs are active HIGH or active LOW. In the dual 1-of-4 mode the Address inputs are  $A_{0a}$ ,  $A_{1a}$  and  $A_{0b}$ ,  $A_{1b}$  with  $A_{2a}$  unused (i.e., left open, tied to  $V_{EE}$  or with LOW signal applied). In the 1-of-8 mode, the Address inputs are  $A_{0a}$ ,  $A_{1a}$ ,  $A_{2a}$  with  $A_{0b}$  and  $A_{1b}$  LOW or OPEN. All inputs have 50 k $\Omega$  pull-down resistors.

### Features

- 35% power reduction of the 100170
- 2000V ESD protection
- Pin/function compatible with 100170
- Voltage compensated operating range = -4.2V to -5.7V

( $Z_n$ ) for 1-of-4 applications.

**Absolute Maximum Ratings**(Note 2)

|                                        |                   |
|----------------------------------------|-------------------|
| Storage Temperature ( $T_{STG}$ )      | -65°C to +150°C   |
| Maximum Junction Temperature ( $T_J$ ) | +150°C            |
| $V_{EE}$ Pin Potential to Ground Pin   | -7.0V to +0.5V    |
| Input Voltage (DC)                     | $V_{EE}$ to +0.5V |
| Output Current (DC Output HIGH)        | -50 mA            |
| ESD (Note 3)                           | $\geq 2000V$      |

**Recommended Operating Conditions**

|                             |                |
|-----------------------------|----------------|
| Case Temperature ( $T_C$ )  | 0°C to +85°C   |
| Commercial                  | -40°C to +85°C |
| Industrial                  | -5.7V to -4.2V |
| Supply Voltage ( $V_{EE}$ ) |                |

**Note 2:** The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

**Note 3:** ESD testing conforms to MIL-STD-883, Method 3015.

**Commercial Version****DC Electrical Characteristics** (Note 4)

| $I_{EE}$  | Power Supply Current | -95   |       | -50   | mA    | Inputs OPEN                           |                           |

**Note 4:** The specified limits represent the "worst case" value for the parameter. Since these values normally occur at the temperature extremes, additional noise immunity and guardbanding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.

| $V_{IH}$  | Input HIGH Voltage   | -1170               | -870  | -1165                              | -870  | mV    | Guaranteed HIGH Signal for All Inputs |              |
| $V_{IL}$  | Input LOW Voltage    | -1830               | -1480 | -1830                              | -1475 | mV    | Guaranteed LOW Signal for All Inputs  |              |
| $I_{IL}$  | Input LOW Current    | 0.50                |       | 0.50                               |       | μA    | $V_{IN} = V_{IL} (Min)$               |              |
| $I_{IH}$  | Input HIGH Current   |                     | 300   |                                    | 240   | μA    | $V_{IN} = V_{IH} (Max)$               |              |
| $I_{EE}$  | Power Supply Current | -95                 | -50   | -95                                | -50   | mA    | Inputs OPEN                           |              |

**Note 5:** The specified limits represent the "worst case" value for the parameter. Since these values normally occur at the temperature extremes, additional noise immunity and guardbanding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.

### PLCC AC Electrical Characteristics

$V_{EE} = -4.2V$  to  $-5.7V$ ,  $V_{CC} = V_{CCA} = GND$

## Test Circuit

### Notes:

$V_{CC}, V_{CCA} = +2V, V_{EE} = -2.5V$

$L1$  and  $L2$  = equal length  $50\Omega$  impedance lines

$R_T = 50\Omega$  terminator internal to scope

Decoupling  $0.1\mu F$  from GND to  $V_{CC}$  and  $V_{EE}$

All unused outputs are loaded with  $50\Omega$  to GND

$C_L$  = Fixture and stray capacitance  $\leq 3\text{ pF}$

### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
