DESCRIPTION

The 602-1 is an AC output solid-state relay designed for power switching. The relay incorporates a hermetically sealed, optically coupled solid state relay as a driver. This driver provides zero voltage turn-on as well as a logic compatible control circuit. The relay output is rated for 10A at 250Vac and switches the load with a hermetically sealed triac. A built-in snubber circuit provides reliable switching of both resistive and reactive loads with power factors as low as 0.2. The internal components are potted with a thermally conductive epoxy, which provides an environmental seal for severe environmental conditions encountered in military and aerospace applications. The 602-1 is available in W and Y screening levels. The 602-1Y is available to DESC drawing 86031-001.
