

Data Sheet

- ITEM : ESD FILTER

-PART NO : ICVE10054E250R401FR

1. Scope

- This specification applies to R-varistor for EMI & ESD devices.
- The specification can be modified by documentary agreement between design engineers and customers.

2. Features

- 4 EMI filter lines per device.
- Multilayer chip EMI suppression filter utilizing π -type circuit.
- Very thin (max. 0.50t) and low space consuming(1.6X0.8mm²) size.
- Steep attenuation characteristic plot, Highly effective noise suppression.
- Covers a wide range of frequencies.
- No asymmetrical degradation.
- Simpler fabricating process than diode-type filters.
- Soldering of plating type terminations guarantee high physical and electrical reliability.

3. Applications

- Where EMI filtering in ESD sensitive equipment is required.
- Mobile Phones
- Computers and Printers
- Communication Systems
- Internet Appliances
- PDAs
- Laptop Computers

4. Configuration and Dimensions

Unit : mm

Symbol	Dimensions	Symbol	Dimensions

■ TERMINOLOGY

- I_L : Maximum steady state DC operating voltage the varistor can maintain and not exceed 20 μ A leakage current.
- V_B : Voltage across the device measured at 1mA DC current
- V_C : Maximum peak voltage across the varistor measured at a specified pulse and waveform
Pulse Current : 1A , Waveform : 8/20 μ s
- I_{peak} : Maximum peak current which may be applied with the specified waveform without device failure
- C : Device capacitance measured with zero volt bias 0.5Vrms and 1MHz
