Gear Tooth Speed Sensors

GS101201 – GS101202 Sensors

Flange mount gear tooth speed sensor

Description

The GS101201-GS101202 series gear tooth speed sensors are Hall Effect devices designed for use in applications where ferrous edge detection/near zero speed sensing is needed. They provide a sinking output current.

Features

- From near zero speed up to 15 kHz sensing capability
- Plastic flange-mount housing
- Compatible with unregulated power supply
- RoHS compliant
- IP67
- Typical air gap of 1.5 mm*

Typical Applications

- Speedometers
- Anti-lock braking systems
- Exercise equipment
- CNC machine tools

Environmental Specifications

Vibration	Sinusoidal, 15 g max from 40 Hz to 2 kHz
Mechanical Shock Resistance	50 g
Maximum Speed Detection	15 kHz
Operating Temperature	-40 ºC to 125 ºC (-40 ºF to 257 ºF)
Storage Temperature	-40 ºC to 125 ºC (-40 ºF to 257 ºF)
Ingress Protection	IP67

Electrical Specifications

Operating Supply Voltage	5 to 24 VDC
Maximum Input Voltage	30 VDC
Maximum Reverse Voltage	24 VDC
Supply Current	3 mA typ., 6 mA max
Output Sink Current	20 mA max
Recommended Pull-Up Resistor	See chart

Mechanical Specifications

Housing Material	Glass Reinforced Thermoplastic
Maximum Installation Torque Limit	5.65 Nm (50 in lb) on threads
Operating Air Gap / Sensing Distance* * With recommended target type; see drawing	1.5 mm (0.06")
Sensor Orientation	Not sensitive
Possible O-ring size	AS568A-114 (varies with application)

Products

Part Number	Leads	Connector**
GS101201		Delphi Metri-Pack 150
GS101202	20 AWG x 1 m	

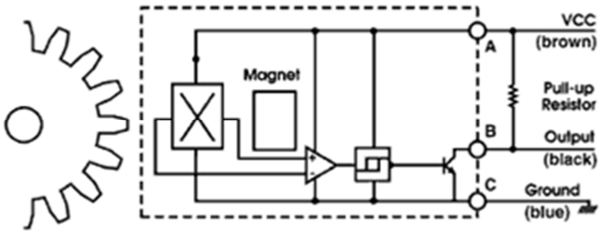

**Mates to Delphi connector 12162280

Note: An external pull-up resistor is required, the value of which is dependent on the supply voltage. The resistor should be connected between the output and Vcc. Refer to the wiring diagram for lead colors or pin numbering as applicable.

Recommended External Pull-Up Resistor

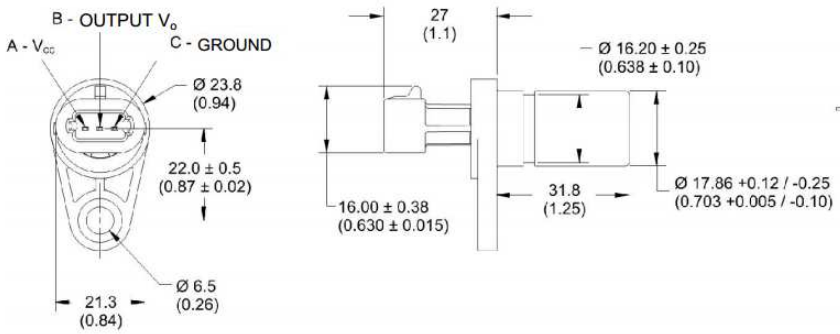

Volts DC	5	9	12	15	24
Ohms	1k	1.8k	2.4k	3k	3k

Installation

For best results, we recommend targets made from low carbon cold rolled steel. Other factors that influence sensor performance include gear tooth height and width, space between the teeth, shape of the teeth and thickness of the target. As a general guideline, consider a target with minimum parameters as shown below. Note that smaller dimensions may work, but testing for the application is required.

Tooth Height	Tooth Width	Distance between Teeth	Target Thickness
5.0 mm (.200")	2.5 mm (.100")	10 mm (.400")	6.35 mm (.250")
