

Low Voltage, 1- Ω Single SPDT Analog Switch (1:2 Multiplexer) with Power Down Protection

DESCRIPTION

The DG4157 is a high performance single pole double throw analog switch designed for 1.8 V to 5.5 V operation with single power rail.

Fabricated with high density CMOS technology, the device achieves low on resistance as 1 Ω at 4.5 V power supply and fast switching speed. The - 3 dB bandwidth is typically 117 MHz.

The DG4157 features break before make switch performance, and guarantees logic HIGH control input threshold as low as 1.4 V over the range up to 5.5 V.

It can handle both analog and digital signals and permits signals with amplitudes of up to V_{CC} to be transmitted in either direction.

Power down protection circuit is built in to prevent abnormal current path through signal pins during power down condition.

Each output pin (A, B_0 , or B_1) can withstand greater than 8 kV (human body model).

It is available in both SC-70-6 and miniQFN6 packages.

The features make it an ideal part for the switching of audio, video, and data stream.

FEATURES

- Direct cross of industry standard xxx4157
- 1.8 V to 5.5 V operation voltage range
- Guaranteed 1.4 V logic high input threshold at $V_{CC} = 5.5$ V
- 117 MHz, - 3 dB bandwidth
- Low on-resistance
- Power down protection

RoHS*
COMPLIANT

FUNCTIONAL BLOCK DIAGRAM AND PIN CONFIGURATION

TRUTH TABLE

Logic Input (S)	Function
0	B_0 Connected to A
1	B_1 Connected to A

ORDERING INFORMATION

Temp. Range	Package	Part Number
- 40 °C to 85 °C	SC-70-6L	DG4157DL-T1-E3
	miniQFN-6L	DG4157DN-T1-E4

* Pb containing terminations are not RoHS compliant, exemptions may apply.

ABSOLUTE MAXIMUM RATINGS

Parameter		Limit	Unit
Reference V+ to GND		- 0.3 to + 6	V
S, A, B ^a		- 0.3 to (V+ + 0.3)	
Continuous Current (Any terminal)		± 200	mA
Peak Current (Pulsed at 1 ms, 10 % duty cycle)		± 400	
Storage Temperature	D Suffix	- 65 to 150	°C
Power Dissipation (Packages) ^b	SC-70-6L ^c	250	mW
	miniQFN-6L ^d	160	

Notes:

a. Signals on A, or B or S exceeding V+ will be clamped by internal diodes. Limit forward diode current to maximum current ratings.

b. All leads welded or soldered to PC board.

c. Derate 3.1 mW/°C above 70 °C.

d. Derate 2.0 mW/°C above 70 °C.

Notes:

a. Room = 25 °C, Full = as determined by the operating suffix.

b. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.

c. Typical values are for design aid only, not guaranteed nor subject to production testing.

d. Guarantee by design, nor subjected to production test.

e. V_{IN} = input voltage to perform proper function.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

TYPICAL CHARACTERISTICS $T_A = 25^\circ\text{C}$, unless otherwise noted
