Function and Time Setting

Upper right knob: Setting of function A - delay on operate B2 - simmetrical recycler E - interval J - one shot	Lower left knob: Time range selector 1.2, 3, 12 and 30
Lower right knob: Time unit selector sec (seconds) min (minuts) hrs (hours) 10h (10 hours)	Centre knob: Time setting on relative scale

Mode of Operation

Function A Delay on operate The set delay period begins as soon as the power supply is connected. At the end of the set delay the relay operates and doesn't release until the power supply is interrupted for at least 100 ms.	Function B₂ Symmetrical recycler (ON first) The relay operates and the time period start as soon as the power is applied. At the end of the first set time period, the relay releases. At the end of the second time period (equal to the first), the relay operates again. This sequence continues with equal ON- and OFF- time periods until the power supply is interrupted for at least 100 ms.	Function E Interval The relay operates and the time period begins as soon as the power is applied. The relay releases at the end of the time period or when the power supply is disconnect- ed for at least 100 ms.	Function J One shot The time period begins as soon as the power supply is connected and at the end of this period the relay operates for 1s.
