HYBRID ULTRASONIC FLOWMETER <Duosonics>
(Pulse Doppler method + Transit Time method)

DATA SHEET   FSH, FSW, FLY

This meter is the world's first non-intrusive type ultrasonic flowmeter utilizing Pulse Doppler method along with Transit Time method. It enables measurement of velocity profile directly resulting in high accuracy. This makes it suitable for undeveloped flow and for short straight pipes. Pulse Doppler method requires reflectors in the liquid and is utilized on opaque liquids while Transit Time method requires ultrasound penetration and is ideal for clean liquids. The new hybrid technology utilizes both methods in a complementary fashion thus enabling a wider range of applications than it is possible now. In addition, thanks to Fuji's new state-of-the-art algorithm, either method can be automatically switched to accommodate for varying fluid conditions such as concentration of particles and/or air bubbles and flow velocity.

Flow transmitter (FSH)

Detector (FSW)

Measurement principle

<Pulse Doppler method>

• Ultrasound pulses are transmitted into a liquid, and flow velocity profile is found and the flow rate is measured by using the characteristics that Doppler frequency of the echo from reflectors such as air bubbles and particles in the liquid changes according to flow velocity.

<Transit Time method>
• Ultrasound pulses are propagated slanted both from the upstream and downstream, and flow rate is measured by detecting the time difference generated with the flow.

Note1: When total pulse output has been selected for DO1, DO2 or DO3 specify total pulse value and total pulse width so that conditions 1 and 2 shown below are satisfies.

Condition 1 : $\dfrac{\text{Flow span-1*}[m^3/s]}{\text{total pulse value*}[m^3]} \leqq$ 1000 [In the case of DO1 and DO2]
1 [In the case of DO3]

Condition 2 : $\dfrac{\text{Flow span-1*}[m^3/s]}{\text{total pulse value*}[m^3]} \leqq \dfrac{1000}{2 \times \text{total pulse width }[ms]}$

* In the case of 2 ranges, perform calculations using either flow span-1 or flow span-2, whichever is greater.

⚠ Caution on Safety
