

NCV9731 1MW50AGEVB

NCV9731 1A Evaluation Board User's Manual

Description

The NCV97311A is 3-output regulator consisting of a low-I_q battery-connected 3 A 2 MHz non-synchronous switcher and two low-voltage 1.5 A 2 MHz synchronous switchers; all using integrated power transistors.

The high-voltage switcher is capable of converting a 4.1 V to 18 V battery input to a 5 V output at a constant 2 MHz switching frequency, delivering up to 3 A. In overvoltage conditions up to 36 V, the switching frequency folds back to 1 MHz; in load dump conditions up to 45 V the regulator shuts down.

The output of the battery-connected buck regulator serves as the low voltage input for the 2 synchronous switchers. Each downstream output is adjustable from 1.2 V to 3.3 V, with a 1.5 A current limit and a constant 2 MHz switching frequency. Each switcher has independent enable and reset pins, giving extra power management flexibility.

For low-I_q operating mode the low-voltage switchers are disabled, and the standby rail is supplied by a low-I_q LDO (up to 150 mA) with a typical I_q of 30 μA. The LDO regulator is in parallel to the high-voltage switcher, and is activated when the switcher is forced in standby mode.

All 3 SMPS outputs use peak current mode control with internal slope compensation, internally-set soft-start, battery undervoltage lockout, battery overvoltage protection, cycle-by-cycle current limiting, hiccup mode short-circuit protection and thermal shutdown. An error flag is available for diagnostics.

Key Features

- Low Quiescent Current in Standby Mode
- 2 Microcontroller Enabled Low Voltage Synchronous Buck Converters
- Large Conversion Ratio of 18 V to 3.3 V Battery Connected Switcher
- Wide Input of 4.1 to 45 V with Undervoltage Lockout (UVLO)
- Fixed Frequency Operation Adjustable from 2.0 to 2.6 MHz
- Internal 1.5 ms Soft-starts
- Cycle-by-cycle Current Limit Protections
- Hiccup Overcurrent Protections (OCP)
- Individual Reset Pins with Adjustable Delays
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

Typical Applications

- Infotainment, Body Electronics, Telematics, ECU

TYPICAL APPLICATION

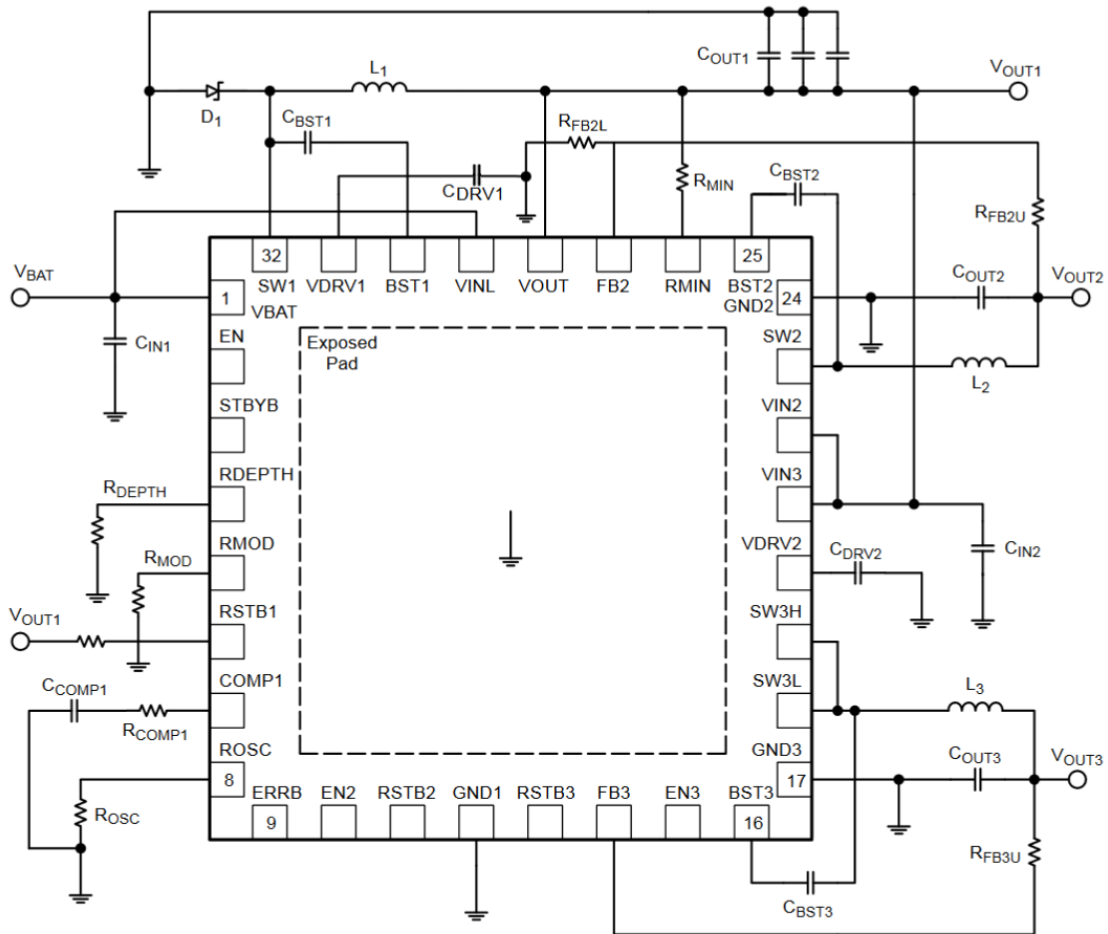

Figure 3. Typical Application

Table 1. EVALUATION BOARD TERMINALS

Pin Name	Function
VBAT	Positive dc input voltage
GND	Common dc return
VOUT1	Positive 5.0 V dc output voltage (LDO / switcher 1)
VOUT2	Positive DC output voltage (switcher 2)
VOUT3	Positive DC output voltage (switcher 3)
EN	Master enable input. Includes jumper J3 to connect to VBAT
STBYB	Standby enable input. Includes jumper J4 to connect to VBAT
EN2	Switcher 2 enable input. Includes jumper J6 to connect to VOUT1
EN3	Switcher 3 enable input. Includes jumper J5 to connect to VOUT1
ERRB	Error flag combining temperature and input and output voltage sensing
RST1B	Reset with adjustable delay. Goes low when the VOUT1 is out of regulation
RST2B	Reset with adjustable delay. Goes low when the VOUT2 is out of regulation
RST3B	Reset with adjustable delay. Goes low when the VOUT3 is out of regulation

NCV97311MW50AGEVB

Table 2. ABSOLUTE MAXIMUM RATINGS (Voltages are with respect to GND)

Rating	Value	Unit
Dc Supply Voltage (VBAT, EN, STBYB)	-0.3 to 36	V
Dc Supply Voltage (VIN2, VIN3)	-0.3 to 12	V
Dc Supply Voltage (RSTB1, RSTB2, RSTB3, ERRB, EN2, EN3)	-0.3 to 6	V
Storage Temperature Range	-55 to 150	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Table 3. ELECTRICAL CHARACTERISTICS ($T_A = 25^\circ\text{C}$, $4.5 \leq V_{IN} \leq 18\text{ V}$, $I_{OUT} \leq 2\text{ A}$, unless otherwise specified)

Characteristic	Conditions	Typical Value	Unit
REGULATION			
Output Voltage (VOUT1)		5.0	V
Output Voltage (VOUT2)		3.3	V
Output Voltage (VOUT3)		1.2	V
Line Regulation (VOUT1)	$I_{OUT1} = 1.0\text{ A}$	0.03	%
Line Regulation (VOUT2)	$I_{OUT2} = 1.0\text{ A}$	0.01	%
Line Regulation (VOUT3)	$I_{OUT3} = 1.0\text{ A}$	0.001	%
Load Regulation (VOUT1)	$V_{BAT} = 13.2\text{ V}$	0.3	%
Load Regulation (VOUT2)	$V_{BAT} = 13.2\text{ V}$	0.02	%
Load Regulation (VOUT3)	$V_{BAT} = 13.2\text{ V}$	0.03	%
SWITCHING			
Switching Frequency		2.0	MHz
Soft-start Time		1.4	ms
R_{OSC} Frequency Range	$50\text{ k}\Omega \geq R_{OSC} \geq 10\text{ k}\Omega$	2.0 to 2.6	MHz
CURRENT LIMIT			
Peak Current Limit (VOUT1)	$STBYB = 0\text{ V}$	0.2	A
Peak Current Limit (VOUT1)	$STBYB = 5\text{ V}$	4.4	A
Peak Current Limit (VOUT2)		2.9	A
Peak Current Limit (VOUT3)		2.9	A
PROTECTION			
Input Undervoltage Lockout (UVLO)	V_{BAT} Decreasing	3.9	V
Input Overvoltage Protection	V_{BAT} Increasing	36	V
Thermal Warning	T_J Rising	150	°C
Thermal Shutdown	T_J Rising	170	°C

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

NCV97311MW50AGEVB

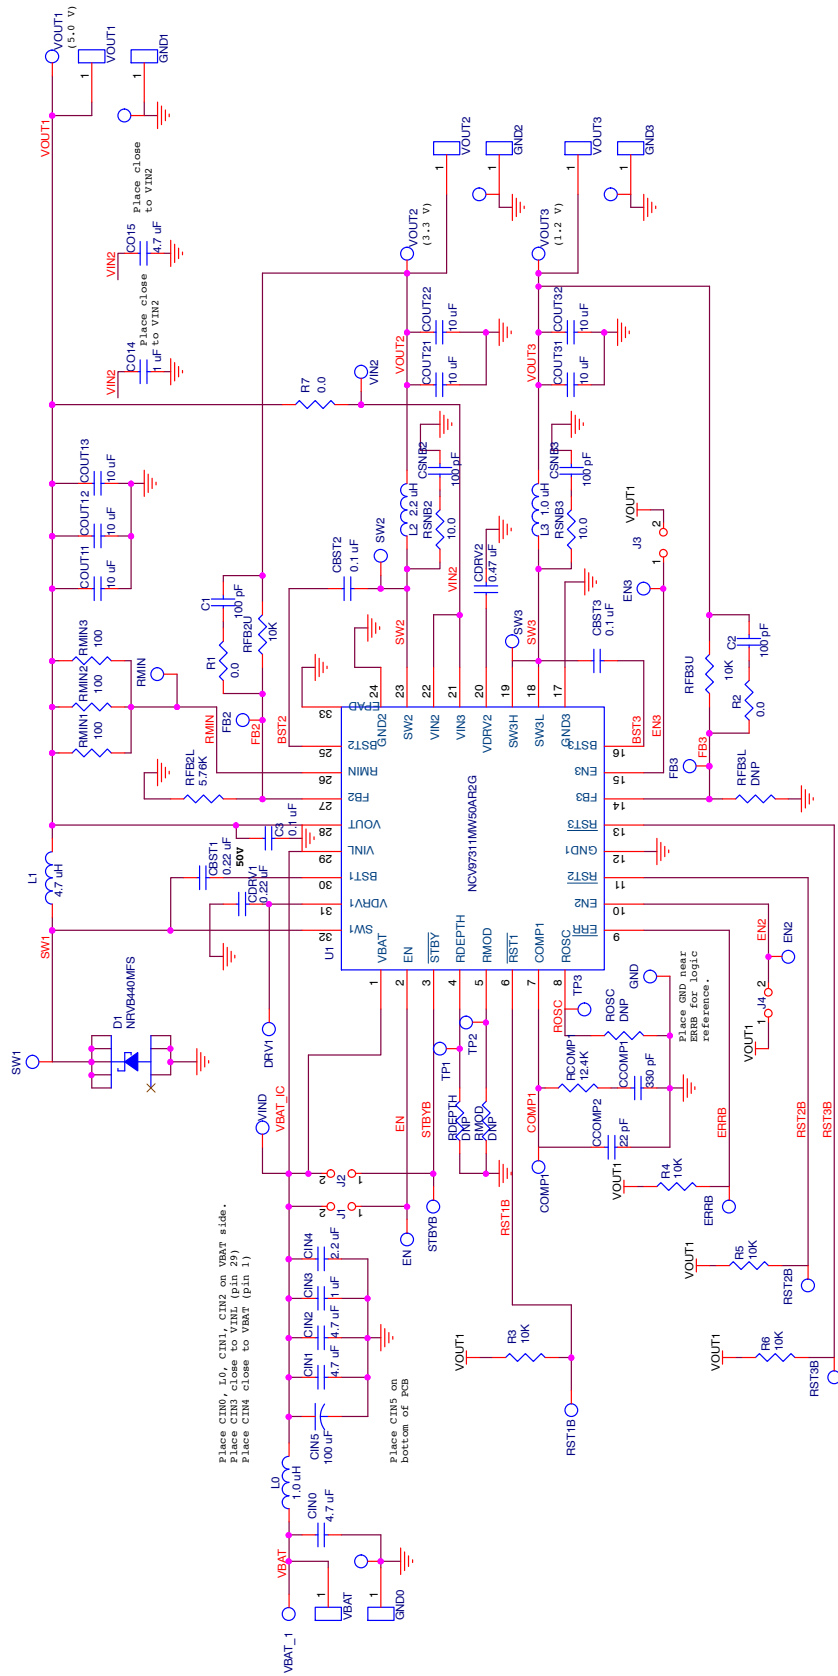

Figure 4. NCV97311AGEVB 5.0 V Board Schematic

NCV97311MW50AGEVB

Operational Guidelines

1. Connect a dc input voltage, within the 6.0 V to 36 V range, between VBAT and GND.
2. Connect a load (< 150 mA) between VOUT1 and GND
3. Connect a dc enable voltage, within the 2.0 V to 36 V range, between EN and GND. This will enable the internal LDO for low Iq mode. You may use jumper J1 to connect EN directly to VBAT.
 - a. The VOUT1 signal should be 5.0 V.
 - b. The VOUT2 signal should be disabled (regardless of EN2 state) and read 0 V.
 - c. The VOUT3 signal should be disabled (regardless of EN3 state) and read 0 V.
4. Connect a dc enable voltage, within the 2.0 V to 36 V range, between STBYB and GND. This will exit low Iq mode and power up switcher 1. You may use jumper J2 to connect STBYB directly to VBAT.

The VOUT1 signal should still be 5.0 V. You may now add a higher load to VOUT1.
5. Connect a dc enable voltage, within the 2.0 V to 6 V range, between EN2 and GND. This will power up switcher 2. You may use jumper J4 to connect EN2 directly to VOUT1.

The VOUT2 signal should be 3.3 V.
6. Connect a dc enable voltage, within the 2.0 V to 6 V range, between EN3 and GND. This will power up switcher 3. You may use jumper J3 to connect EN3 directly to VOUT1.

The VOUT3 signal should be 1.2 V.

Figure 5. NCV97311A Board Connections

APPLICATION INFORMATION

Output Voltage Selection

The voltage outputs for switcher 2 and switcher 3 are adjustable and can be set with a resistor divider. The FB reference for both switchers is 1.2 V.

The upper resistor is set to 10 kΩ and is part of the feedback loop. To maintain stability over all conditions, it is recommended to change the only the lower feedback resistor to set the output voltage. Use the following equation:

$$R_{LOWER} = R_{UPPER} \frac{V_{FB}}{V_{OUT} - V_{FB}}$$

Some common setups are listed below:

Desired Output (V)	VREF (V)	R _{UPPER} (kΩ, 1%)	R _{LOWER} (kΩ, 1%)
1.2	1.2	10.0	NP
1.5	1.2	10.0	40.0
1.8	1.2	10.0	20.0
2.5	1.2	10.0	9.31
3.3	1.2	10.0	5.76

Spread Spectrum

In SMPS devices, switching translates to higher efficiency. Unfortunately, the switching leads to a much noisier EMI profile. We can greatly decrease some of the radiated emissions with some spread spectrum techniques. Spread spectrum is used to reduce the peak electromagnetic emissions of a switching regulator.

The spread spectrum used in the NCV97311A is an “up-spread” technique, meaning the switching frequency is spread upward from the 2.0 MHz base frequency. For example, a 5 % spread means that the switching frequency is swept (spread) from 2.0 MHz up to 2.1 MHz in a linear fashion – this is called the modulation depth. The rate at which this spread takes place is called the modulation frequency. For example, a 10 kHz modulation frequency means that the frequency is swept from 2.0 MHz to 2.1 MHz in 50 μs and then back down from 2.1 MHz to 2.0 MHz in 50 μs.

NCV97311MW50AGEVB

The modulation depth and modulation frequency are each set by 2 external resistors to GND. The modulation frequency can be set from 5 kHz up to 50 kHz using a resistor from the RMOD pin to GND. The modulation depth can be set from 3% up to 30% of the nominal switching frequency using a resistor from the RDEPTH pin to GND. Please see the curves below for typical values:

Spread spectrum is automatically turned off when there is a short to GND or an open circuit on either the RMOD pin or the RDEPTH pin. Please be sure that the ROSC pin is an open circuit when using spread spectrum.

ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.

The evaluation board/kit (research and development board/kit) (hereinafter the "board") is not a finished product and is as such not available for sale to consumers. The board is only intended for research, development, demonstration and evaluation purposes and should as such only be used in laboratory/development areas by persons with an engineering/technical training and familiar with the risks associated with handling electrical/mechanical components, systems and subsystems. This person assumes full responsibility/liability for proper and safe handling. Any other use, resale or redistribution for any other purpose is strictly prohibited.

The board is delivered "AS IS" and without warranty of any kind including, but not limited to, that the board is production-worthy, that the functions contained in the board will meet your requirements, or that the operation of the board will be uninterrupted or error free. ON Semiconductor expressly disclaims all warranties, express, implied or otherwise, including without limitation, warranties of fitness for a particular purpose and non-infringement of intellectual property rights.

ON Semiconductor reserves the right to make changes without further notice to any board.

You are responsible for determining whether the board will be suitable for your intended use or application or will achieve your intended results. Prior to using or distributing any systems that have been evaluated, designed or tested using the board, you agree to test and validate your design to confirm the functionality for your application. Any technical, applications or design information or advice, quality characterization, reliability data or other services provided by ON Semiconductor shall not constitute any representation or warranty by ON Semiconductor, and no additional obligations or liabilities shall arise from ON Semiconductor having provided such information or services.

The boards are not designed, intended, or authorized for use in life support systems, or any FDA Class 3 medical devices or medical devices with a similar or equivalent classification in a foreign jurisdiction, or any devices intended for implantation in the human body. Should you purchase or use the board for any such unintended or unauthorized application, you shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the board.

This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and may not meet the technical requirements of these or other related directives.

FCC WARNING – This evaluation board/kit is intended for use for engineering development, demonstration, or evaluation purposes only and is not considered by ON Semiconductor to be a finished end product fit for general consumer use. It may generate, use, or radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment may cause interference with radio communications, in which case the user shall be responsible, at its expense, to take whatever measures may be required to correct this interference.

ON Semiconductor does not convey any license under its patent rights nor the rights of others.

LIMITATIONS OF LIABILITY: ON Semiconductor shall not be liable for any special, consequential, incidental, indirect or punitive damages, including, but not limited to the costs of requalification, delay, loss of profits or goodwill, arising out of or in connection with the board, even if ON Semiconductor is advised of the possibility of such damages. In no event shall ON Semiconductor's aggregate liability from any obligation arising out of or in connection with the board, under any theory of liability, exceed the purchase price paid for the board, if any.
