

## 1. Description

The KIA431 series ICs are three-terminal adjustable shunt regulators with guaranteed thermal stability over a full operation range. These ICs feature sharp turn-on characteristics, low temperature coefficient and low output impedance, which make them ideal substitutes for Zener diodes in applications such as switching power supply, charger and other adjustable regulators. The KIA431 precision reference is offered in three band gap tolerance: 0.5%, 1% and 1.5%.

## 2. Features

- Adjustable output voltage from 2.5V to 36V
- Low dynamic output resistance: 0.2 ohm
- Sink current capacity from 1m A to 100m A
- Low output noise
- Typical equivalent full range temperature coefficient of 30ppm/° C

## 3. Applications

- PC motherboard
- Voltage monitor
- Voltage reference
- PWM down converter with reference
- Charge
