

Stacked MCP (Multi-Chip Package) FLASH MEMORY & SRAM
CMOS

**64M (×8/×16) FLASH MEMORY &
8M (×8/×16) STATIC RAM**

MB84VD23280EA-90/MB84VD23280EE-90

■ FEATURES

- Power supply voltage of 2.7 V to 3.3 V
- High performance
 - 90 ns maximum access time (Flash)
 - 70 ns maximum access time (SRAM)
- Operating Temperature
 - 25 °C to +85 °C
- Package 101-ball BGA

(Continued)

■ PRODUCT LINEUP

		Flash Memory	SRAM
Ordering Part No.	$V_{ccf}, V_{ccs} = 3.0 \text{ V} \begin{matrix} +0.3\text{V} \\ -0.3\text{V} \end{matrix}$	MB84VD23280EA-90/MB84VD23280EE-90	
Max. Address Access Time (ns)		90	70
Max. \overline{CE} Access Time (ns)		90	70
Max. \overline{OE} Access Time (ns)		35	35

■ PACKAGE

101-pin plastic FBGA

BGA-101P-M01

(Continued)

— FLASH MEMORY

- **Simultaneous Read/Write operations (flex bank)**

Two virtual Banks are chosen from the combination of four physical banks

Host system can program or erase in one bank, then read immediately and simultaneously read from the other bank between read and write operations

Read-while-erase

Read-while-program

- **Minimum 100,000 write/erase cycles**

- **Sector erase architecture**

Sixteen 4 K words and one hundred twenty-six 32 K word.

Any combination of sectors can be concurrently erased. Also supports full chip erase.

- **Embedded Erase™* Algorithms**

Automatically pre-programs and erases the chip or any sector

- **Embedded Program™* Algorithms**

Automatically writes and verifies data at specified address

- **Data Polling and Toggle Bit feature for detection of program or erase cycle completion**

- **Ready-Busy output (RY/BY)**

Hardware method for detection of program or erase cycle completion

- **Automatic sleep mode**

When addresses remain stable, automatically switch themselves to low power mode.

- **Low V_{CC} write inhibit ≤ 2.5 V**

- **Hidden ROM (Hi-ROM) region**

256 byte of Hi-ROM, accessible through a new “Hi-ROM Enable” command sequence

Factory serialized and protected to provide a secure electronic serial number (ESN)

- **WP/ACC input pin**

At V_{IL}, allows protection of 2 of 8 Kbytes on both ends of each boot sector, regardless of sector protection/unprotection status.

At V_{IH}, allows removal of boot sector protection

At V_{ACC}, increases program performance

- **Program Suspend/Resume**

Suspends the program operation to allow a read in another address

- **Erase Suspend/Resume**

Suspends the erase operation to allow a read in another sector within the same device

- **Please refer to “MBM29DL640E” data sheet in detailed function**

— SRAM

- **Power dissipation**

Operating : 50 mA Max.

Standby : 25 μA Max.

- **Power down features using $\overline{CE1}$ s and CE2s**

- **Data retention supply voltage: 1.5 V to 3.3 V**

- **CE1s and CE2s Chip Select**

- **Byte data control: \overline{LB} s (DQ₇-DQ₀), \overline{UB} s (DQ₁₅-DQ₈)**

■ PIN ASSIGNMENT

MB84VD23280EA-90/MB84VD23280EE-90

■ PIN DESCRIPTION

Pin name	Input/ Output	Description
A ₁₈ to A ₀	I	Address Inputs (Common)
A ₂₁ to A ₁₉ , A ₋₁	I	Address Inputs (Flash)
SA	I	Address Input (SRAM)
DQ ₁₅ to DQ ₀	I/O	Data Inputs/Outputs (Common)
$\overline{\text{CE}}_f$	I	Chip Enable (Flash)
$\overline{\text{CE}}_{1s}$	I	Chip Enable (SRAM)
CE _{2s}	I	Chip Enable (SRAM)
$\overline{\text{OE}}$	I	Output Enable (Common)
$\overline{\text{WE}}$	I	Write Enable (Common)
RY/ $\overline{\text{BY}}$	O	Ready/Busy Output (Flash) Open Drain Output
$\overline{\text{UB}}_s$	I	Upper Byte Control (SRAM)
$\overline{\text{LB}}_s$	I	Lower Byte Control (SRAM)
CIO _f	I	I/O Configuration (Flash) CIO _f = V _{IH} is Word mode (x16), CIO _f = V _{IL} is Byte mode (x8)
CIO _s	I	I/O Configuration (SRAM) CIO _s = V _{IH} is Word mode (x16), CIO _s = V _{IL} is Byte mode (x8)
$\overline{\text{RESET}}$	I	Hardware Reset Pin/Sector Protection Unlock (Flash)
$\overline{\text{WP}}/\text{ACC}$	I	Write Protect / Acceleration (Flash)
N.C.	—	No Internal Connection
V _{SS}	Power	Device Ground (Common)
V _{CCf}	Power	Device Power Supply (Flash)
V _{CCs}	Power	Device Power Supply (SRAM)

MB84VD23280EA-90/MB84VD23280EE-90

Boot Block Sector Write Protection	X	X	X	X	X	X	X	X	X	X	X	L

Legend: L = V_{IL}, H = V_{IH}, X = V_{IL} or V_{IH}. See DC Characteristics for voltage levels.

- Notes:
1. Other operations except for indicated this column are inhibited.
 2. \overline{WE} can be V_{IL} if \overline{OE} is V_{IL}, \overline{OE} at V_{IH} initiates the write operations.
 3. Do not apply $\overline{CE}_f = V_{IL}$, $\overline{CE}_{1s} = V_{IL}$ and $CE_{2s} = V_{IH}$ at a time.
 4. It is also used for the extended sector group protections.
 5. Protect of 2 of 8 Kbytes on both ends of each boot sector.
 6. SA; Don't care or Open.

Table 5 Flash Memory Autoselect Codes

Type		A ₂₁ to A ₁₂	A ₆	A ₃	A ₂	A ₁	A ₀	A ₋₁ *1	Code (HEX)
Manufacture's Code		BA*3	V _{IL}	V _{IL}	V _{IL}	V _{IL}	V _{IL}	V _{IL}	04h
Device Code	Byte	BA*3	V _{IL}	V _{IL}	V _{IL}	V _{IL}	V _{IL}	V _{IL}	7Eh
	Word							X	227Eh
Extended Device Code *4	Byte	BA*3	V _{IL}	V _{IH}	V _{IH}	V _{IH}	V _{IH}	V _{IL}	02h
	Word							X	2202h
	Byte	BA*3	V _{IL}	V _{IH}	V _{IH}	V _{IH}	V _{IH}	V _{IL}	01h
	Word							X	2201h
Sector Group Protection		Sector Group Addresses	V _{IL}	V _{IL}	V _{IL}	V _{IH}	V _{IL}	V _{IL}	01h*2

*1 : A₋₁ is for Byte mode.

*2 : Outputs 01h at protected sector group addresses and outputs 00h at unprotected sector group addresses.

*3 : When V_{ID} is applied, both Bank 1 and Bank 2 become Autoselect mode, which leads to the simultaneous operation unable to be executed. Consequently, specifying the bank address is not demanded. However, the bank address needs to be indicated when Autoselect mode is read out at command mode; because then it becomes OK to activate simultaneous operation.

*4 : At WORD mode, a read cycle at address (BA) 01h (at BYTE mode, (BA) 02h) outputs device code. When 227Eh (at BYTE mode, 7Eh) was output, this indicates that there will require two additional codes, called Extended Device Codes. Therefore the system may continue reading out these Extended Device Codes at the address of (BA) 0Eh (at BYTE mode, (BA) 1Ch) , as well as at (BA) 0Fh (at BYTE mode, (BA) 1Eh) .

(Continued)

*1: This command is valid while Fast Mode.

*2: This command is valid while $\overline{\text{RESET}} = V_{\text{ID}}$.

*3: This command is valid while Hi-ROM mode.

*4: The data "00h" is also acceptable.

Notes: 1. Address bits A_{21} to $A_{11} = X = \text{"H"}$ or "L" for all address commands except or Program Address (PA), Sector Address (SA), and Bank Address (BA), and Sector Group Address (SPA).

2. Bus operations are defined in Tables 3 and 4.

3. RA = Address of the memory location to be read

PA = Address of the memory location to be programmed

Addresses are latched on the falling edge of the write pulse.

SA = Address of the sector to be erased. The combination of A_{21} , A_{20} , A_{19} , A_{18} , A_{17} , A_{16} , A_{15} , A_{14} , A_{13} , and A_{12} will uniquely select any sector.

BA = Bank Address (A_{21} , A_{20} , A_{19})

4. RD = Data read from location RA during read operation.

PD = Data to be programmed at location PA. Data is latched on the falling edge of write pulse.

5. SPA = Sector group address to be protected. Set sector group address and $(A_6, A_3, A_2, A_1, A_0) = (0, 0, 0, 1, 0)$.

SD = Sector group protection verify data. Output 01h at protected sector group addresses and output 00h at unprotected sector group addresses.

6. HRA = Address of the Hi-ROM area Word Mode: 000000h to 00007Fh

Byte Mode: 000000h to 0000FFh

7. HRBA = Bank Address of the Hi-ROM area ($A_{21} = A_{20} = A_{19} = V_{\text{IL}}$)

8. The system should generate the following address patterns:

Word Mode: 555h or 2AAh to addresses A_{10} to A_0

Byte Mode: AAAh or 555h to addresses A_{10} to A_0 , and A_{-1}

9. Both Read/Reset commands are functionally equivalent, resetting the device to the read mode.

MB84VD23280EA-90/MB84VD23280EE-90

■ ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Rating		Unit
		Min.	Max.	
Storage Temperature	Tstg	-55	+125	°C
Ambient Temperature with Power Applied	Ta	-25	+85	°C
Voltage with Respect to Ground All pins except A ₉ , \overline{OE} , \overline{RESET} , $\overline{WP/ACC}$ *1	V _{IN} , V _{OUT}	-0.3	V _{ccf} + 0.3	V
			V _{ccs} + 0.3	V
V _{ccf} /V _{ccs} Supply *1	V _{ccf} , V _{ccs}	-0.3	+4.0	V
A ₉ and \overline{OE} *2	V _{IN}	-0.3	+ 13.0	V
\overline{RESET} *2	V _{IN}	-0.5	+ 13.0	V
$\overline{WP/ACC}$ *3	V _{IN}	-0.5	+10.5	V

*1 Minimum DC voltage on input or I/O pins is -0.3 V. During voltage transitions, input or I/O pins may undershoot V_{SS} to -2.0 V for periods of up to 20 ns. Maximum DC voltage on input or I/O pins is V_{ccf} + 0.3 V or V_{ccs} + 0.3 V. During voltage transitions, input or I/O pins may overshoot to V_{ccf} + 2.0 V or V_{ccs} + 2.0 V for periods of up to 20 ns.

*2: Minimum DC input voltage on A₉ and \overline{OE} pin is -0.3 V. Minimum DC input voltage on \overline{RESET} pin is -0.5 V. During voltage transitions, A₉, \overline{OE} , and \overline{RESET} pins may undershoot V_{SS} to -2.0 V for periods of up to 20 ns. Voltage difference between input and supply voltage (V_{IN}-V_{ccf} or V_{ccs}) does not exceed +9.0 V. Maximum DC input voltage on A₉, \overline{OE} , and \overline{RESET} pins is +13.0 V which may overshoot to +14.0 V for periods of up to 20 ns.

*3: Minimum DC input voltage on $\overline{WP/ACC}$ pin is -0.5 V. During voltage transitions, $\overline{WP/ACC}$ pin may undershoot V_{SS} to -2.0 V for periods of up to 20 ns. Maximum DC input voltage on $\overline{WP/ACC}$ pin is +10.5 V which may overshoot to +12.0 V for periods of up to 20 ns, when V_{ccf} is applied.

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

■ RECOMMENDED OPERATING CONDITIONS

Parameter	Symbol	Value		Unit
		Min.	Max.	
Ambient Temperature	Ta	-25	+85	°C
V _{ccf} /V _{ccs} Supply Voltages	V _{ccf} , V _{ccs}	+2.7	+3.3	V

Note: Operating ranges define those limits between which the functionality of the device is guaranteed.

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

Note t_{RC} : Read cycle time

• $\overline{CE1s}$ Controlled Data Retention Mode (Note 1)

MB84VD23280EA-90/MB84VD23280EE-90

• CE2s Controlled Data Retention Mode (Note 3)

- Notes:
1. In $\overline{CE1}$ s controlled data retention mode, input level of CE2s should be fixed Vccs to Vccs-0.2 V or Vss to 0.2 V during data retention mode. Other input and input/output pins can be used between -0.3 V to Vccs+0.3 V.
 2. When $\overline{CE1}$ s is operating at the VIH Min. level, the standby current is given by ISB1s during the transition of Vccs from 3.3V to VIH Min. level.
 3. In CE2s controlled data retention mode, input and input/output pins can be used between -0.3 V to Vccs+0.3V.

■ PIN CAPACITANCE

Parameter	Symbol	Condition	Value			Unit
			Min.	Typ.	Max.	
Input Capacitance	C _{IN}	V _{IN} = 0	—	TBD	TBD	pF
Output Capacitance	C _{OUT}	V _{OUT} = 0	—	TBD	TBD	pF
Control Pin Capacitance	C _{IN2}	V _{IN} = 0	—	TBD	TBD	pF
\overline{WP}/ACC Pin Capacitance	C _{IN3}	V _{IN} = 0	—	TBD	TBD	pF

Note: Test conditions Ta = 25°C, f = 1.0 MHz

■ HANDLING OF PACKAGE

Please handle this package carefully since the sides of packages are right angle.

■ CAUTION

- 1) The high voltage (V_{ID}) can not apply to address pins and control pins except \overline{RESET} . Therefore, it can not use autoselect and sector protect function by applying the high voltage (V_{ID}) to specific pins.
- 2) For the sector protection, since the high voltage (V_{ID}) can be applied to the \overline{RESET} , it can be protected the sector using "Extended sector protect" command.

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document are presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

The contents of this document may not be reproduced or copied without the permission of FUJITSU LIMITED.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipments, industrial, communications, and measurement equipments, personal or household devices, etc.).

CAUTION:

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Control Law of Japan, the prior authorization by Japanese government should be required for export of those products from Japan.
